SALT LAKE CUTY. October 30, 1875.

Editor Deseret News: I have devoted a great portion o who, instead of each carrying his and practical working of chemical own carcass, must needs pile an-other six or seven hundred pounds upon the already heavily laden tal resources of Utah, not solely for individual aggrandizement, but t induce others with necessary capital to inquire into and practically demonstrate our territerial wealth It seems but needful to point

out wherein there is hidden wealth, and that then among our accessfully utilize the bases, to that there are men here from al-most all portions of the civilized neys for the plaintiff in the case of Young vs. Young, and the same to understand how to produce arti-

> in Salt Lake City, its distance from railroad communication, its home consumption, its consumption in the United States, and when it can be shipped abroad, will give the present rates and profits, finally the cost of successfully putting in running operation the industry. By so doing it will tend ultimately to cause Utah to be an exporting country, and to be an exporting country, and consequently find employment for our people, spreading, among all, wealth. And it is certain no place

most valuable

Railroad. The reads are very diffi cult of travel at present, but no doubt when a demand is instituted for sulphur means will be expended to improve the roads.

risited lies in a cave in Tintic Mining District, about 18 miles from the U. S. R. R. It can be freighted to Salt Lake City for \$6.00 per ton. No work has been performed up-on it therefore, no calculation can

difficult; some idea of the con-sumption may be arrived at, when it is known that every drum of caustic soda represents nearly its weight in sulphuric acid, that every 40 gallons of coal oil has taken 28 lbs. of acid to purify it, and that every electric telegraph line requires the presence of this acid to 1 100

Utah consumes about 300 lbs. of this acid daily, and the amount is constantly increasing. It is a corrosive poison, charring organic matter. Very dilute it is semetimes used in medicine, and many salts are formed from it, for instance glauber salts, or sulphate

THE FACTORY Is composed of a lead chamber, a brick furnace, leaden evaporating

ings in question and, should he find them to be out of repair, or in bad condition, to draw the aftention of the Utah Southern railroad efficials to the fact.

Bill of expenses, for October, of Marshal and Chief Engineer, \$294.

35; allowed.

Bill for lumber used at the Asylum, S120; referred to committee on claims.

Bill for lumber used at the Asylum, support the heat generated from the burning sulphur, the fumes of which pass into the chamber. The waves Communications were received from Councillors Feramorz Little and Theodore McKean, stating that they were about to leave the city By listening to the action going on the chamber. The vapor of water is supplied by steam from a boiler, which serves to agitate the gases, to facilitate their combination and form sulphuricacid, which condenses and falls to the bottom. By listening to the action going on pass into the chamber. The vapor

off into leaden evaporating pans, and therein evaporated until the acid shows, by Baume's acidometer, a gravity of 58° or 59°. If you carry it any further in strength the leaden pans are liable to be destroyed Those Horses. -- Recently deputy | The pans are formed of sheet lead lead. It is usual in manufactories

people in this vicinity have, at quire a stronger acid. But in the ing that their animals may proba- bring the acid to the above standbly have formed an attachment for ard. To do this, distillation is had na stills, varying in capacity from ten to twenty gallons when of glass, and if of platina sometimes

capable of holding over 100 gallons.

I will here remark that concentrated sulphuric acid exerts no action on cast iron, and particularly on white cast iron is this the case. On Manufactures Applicable to Utab I am somewhat surprised that this fact has not been universally resorted to. I know that it is practicable, for I had a 600 gallon white cast iron still and used it constantly for many mouths without any perceptible wear, except in the goose neck, where the dilute acid came in contact with it, which was attached to tact with it, which was attached to the still by clamps and could be replaced at pleasure. The cost of glass and platina stills is about the same in the long run, owing to the frequent breaking of the glass. Great care must be taken that lead does not come in contact with the platina, for they immediately form an alloy and melt. Such holes require gold solder for patching, this trouble is entirely avoided in the acid is carried on until the Baume's scale marks 14° B. in the distillate; it is then found that the acid, on cooling to a temperature of 60° Fahenheit, is exactly 66° B, or standard sulphuric acid. This acid is then syphoned into ten gallon carboys, and sealed with earthenware water from the air to the loss of its "Take notice that on Saturday the 22nd of May, 1875, at the hour of 10 o'cleck a. m., of that day, er so soon thereafter as counsel can be heard, the said defendant will, at the federal court house in Salt Lake City, its distance from order vacating and setting aside the order and decree herein made and communication, its home order and decree herein made and communication, its consumption in the consumption gravity. Oil of vitriol has the specific gravity of 1.9 and contains for

on the face of this earth can be found that will vie with Utah in its supply of the elements awaiting the labors of man to render them tric acid, as the operation is con-

The various materials, glass carboys sheet lead, retorts, &c., will be treated of under their appropriate heads. In the next article will be explained the manufacture of nitric and hydrochloric acids. CLARENCE BARRETT.
