

NEWS OF THE MINES.

Ninety-Dollar Ore Reported in the
Shoebridge Bonanza.

FROM THE MINE TO THE MILL.

The New Railway Has Reached the
Bonnechere Mine—Work at
Other Mines.

Accident to Engineer of the Mine.

Royal Baking Powder

ABSOLUTELY PURE

Higher all in Leavening Power.—Latest U. S. Gov't Report.

Business will be opened by the end of next week. Mr. H. M. Marshall is late of Salt Lake and used to run a cigar store there.

THE SECOND "WHITEWASH."

The Salt and Soda Fall to Make Ends Meet Today's Cost.

For the second time in the history of the mine, the salt and soda fall has been "whitewashed" has been recorded. By

this term is meant an entire lack of transfers during the day, salt, and

that was a feature which characterized

the operations at the mine.

Change this morning. Both classes of stocks were run over without a single sale and some of the properties did not receive even the recognition of quote.

To say that the bottom is out of the market is but slightly expressing a truth—a truth that looks to remain so until such time as least one or two more mines open up in the district.

The large holder which carried the Mammoth mine long, will be taken up to the mine over the new line tomorrow. The work of salvaging these bins at the mills is in operation and will be completed by the end of next week.

The Swanson Mining company is taking its shafts in great shape. The workers have just completed two stations in the shafts on the 200 foot level and one on the 400. The shaft is now down 400 feet, and now that the company has got the shafts in order will put an extra men to man the cars. The company is busy and will ship four carloads next week. A small vein of mineral has just been announced in the old mine. About twelve sacks of ore have come from this vein which is fairly rich.

SHOEBRIDGE-BONATHA STRIKE.

A big strike is reported here today at the Shoebridge-Bonanza mine. The property is situated near Houghton River from Silver City, and the parties working the mine are well pleased with the returns of the assay, which go over 100 ounces of silver to the ton and a good deal of gold. The value of the ore is \$100 per ton. One of the company remarked today that they would return to mining again.

STRIKE AT THE PRINCIPLE.

There is much talk here of the recent strike at the Principle, which is being worked by Mr. Smith, a well-known mining man. The ore assays gold, silver and lead and runs away, and, as far as can be learned, the miners will shortly become a chapter of mineral and rock well with the other well known products of Silver City.

THE STANDARD SHAFT.

The shaft of the Standard mine is now down twenty feet and the miners are getting along well, the work showing up in good style. When they have attained depth in the shaft of two hundred feet, they feel confident of having ore rich enough to warrant the expense of putting in the mine. The Mammoth district, they will have to sink a considerable depth before getting good pay.

AT THE MULHILLIAN MINE.

That old time producer and bonanza, the Mulhillian, is making things pretty lively at this great property, they are bringing up ore from the mine day and night, and the great bulk of the ore is being sent to the smelter. The increased output of ore per day, which is shipped and part of which runs the last mile of the company, they say is due to the fact that the Mulhillian property was never in better condition than at the present time.

THE HOME COMPLIANT.

The shaft of the Standard mine is now down twenty feet and the miners are getting along well, the work showing up in good style. When they have attained depth in the shaft of two hundred feet, they feel confident of having ore rich enough to warrant the expense of putting in the mine. The Mammoth district, they will have to sink a considerable depth before getting good pay.

When they have attained depth in the shaft of two hundred feet, they feel confident of having ore rich enough to warrant the expense of putting in the mine. The Mammoth district, they will have to sink a considerable depth before getting good pay.

ARRIVAL OF BONANZA BOSS.

Mr. Charles A. Armstrong, a well-known mining man of Denver, Colo., is in the city. The gentleman is just returning from a visitation trip to the Yellowstone Park and surrounding country. He is one of the owners of the Great Northern mine, which is located in the Overland, in the Bitterroot district. He expects to look into the mines of Marcus before leaving for the district.

BORN FROM R. H. DAVIS.

The Davis's Weekly Store of Mine and Metals.

Manager Schenck of the Dalton & Lark mine is very emphatic in denouncing a rumor that his company is about to suspend operations. To those familiar with the character and workings of the great Dalton & Lark properties it is evident that the company is not in a position to sacrifice the property of ore which it has developed over the time since that was largely the product of development, and property should have been concentrated. The head mill having been destroyed and, accordingly, that week let out to the public, the company is still in its crude state, the management has shut off its production and will only raise and market that which is profitable without taking into account the cost of production. The cost of production of the Dalton & Lark is too high to sustain the company in its present condition.

J. J. McPhee and D. H. Thachet returned Monday from a prospecting trip to the mountains, where, as a whole, is more active than it has been for several years, and many good finds have been made during the summer both in old properties and on new ground. One discovery of the year is the great extent to which the miners failed to realize the value of the mine in the mountains, which is about three miles from the Dalton & Lark.

Mr. McPhee is interested, he and Mr. Thachet did some prospecting and are satisfied that American Fork will yet come to the front as a steady and rich producer.

Falling now are the shipments from the McIntosh Smelter for the present week: Silver King, \$11,250; Silver King, \$10,000; total, 1,190,250.

From the Eureka Brass.

A new town to be known as Robert-son and which will no doubt become the nucleus of a new little district, is the result of the Eureka mine. This is the first of the last near the Hot Spring group of mines.

Capt. A. Hall of Fort Duchesne, a heavy steamship in the Teton, was in the city recently, and has addressed himself well pleased with what he saw out in the district generally and the Tetons particularly.

U. S. Mineral Deputy Brooks is on surveying the Eureka district. The work is not yet completed, and the contractor has begun upon the grade, which is expected to be finished within 30 days.

With the completion of the grade, the contractors will be ready to lay the track between the Eureka and the Great Northern, Steele, Midway & Co. of Salt Lake have just shipped a carload of machinery and supplies to the mine and a force of men have been put on.

The main vein of the Eureka is now in full development, and in former years made quite a large output from a strong vein. The Jumbo is a mere prospect. It is bounded by the Jones to the east and the Jones to the west, through a narrow cut from the Jones, are adjacent veins of which they are owners.

The Old Telegraph house has been up to Wednesday shipped 1,000 tons of ore.

The live fire, opposite the Old Juniper, is shipping about 90 tons of good grade, also a 20-ton lot of concentrates from Hink's Mill, below the Spanish.

The Wolf brothers Wednesday even-

ning brought in from their Adams mine some rock that will go at \$20 per ton.

On Wednesday Colonel Hoffmann, the manager of the Adams mine, and the Old Telegraph mine, will bring a ton of gold, silver and copper. The results obtained from present operations are quite satisfactory, and it may be we are solving an important problem.

PARK CITY MINES.

The Park City Company Acquires the Adams Properties.

The Park City Mine, in speaking to the reporter to the source during the past week, says that the Valley Mining company has sold down to native miners, who are now operating the mine, and are now employed in the mine. The shaft started some time ago is still in use, which is steadily improving in size as each foot is attached, and runs a ton and a half of silver and a half of copper.

The wagon road down Red Pine creek has been repaired and a new road connecting the mine with Red Pine canyon has been constructed, a distance of about two miles.

The wagons will run over without a hitch.

The wagons will run over without a hitch.
