

THIS EVENING'S
BICYCLE RACES.Twenty Kilometer Contest Between
Gibson and Chapman.

BOTH IN FINE CONDITION.

Amateurs Will Compete in Two-Mile
Lap Race—Professionals to
Ride One Mile.

It has been quiet and peaceful at the Utah Palace since this week, since the close of the 24-hour contest, but this morning there will be more lively doings at the famous track. Once more will be heard the rumbling of wheels, the clanging of the bell and the snorting of motor-cycles.

The usual crowd will be there, it is expected, to give the glad hand to the victors and hawl out the "losers."

"Bully" King, John Lawson and Charles Turville will be seen on the track again, having entirely recovered from their strain of the 24-hour event. They will compete in a one-mile professional with Bob Waine, Gus Lawrence, Billy Vaughan, Clem Turville, John Staver, Joe Edmunds, Ben Green and Naderhofer.

The amateurs will ride two miles in a lap race and the event will undoubtedly be exceedingly interesting. Joe Rayburn, a new comer, will break in to the game tonight and it is said he has considerable speed and will figure among the winners when he becomes familiar with the track. The other riders will be Mossberg, Hargren, Bowyer, Schuler, Eddie Smith, Younger, Joseph Smith, Hermanns, Hopper, Name.

The event, however, on which the eyes of the saucer devotees are focused is the match race between "Baby" Gibson and John M. Chapman.

Probably no two riders at the saucer are more evenly matched than are the Georgian and the Georgian. Chapman is in good shape for the kind of race scheduled for tonight. He has been working pretty steadily since Tuesday and is feeling strong. Little Gibson is in tip top shape. He has been riding from ten to twenty five miles every day, paced and unpaced, and claims to be able to ride a mile paced in under two minutes. Those who have watched him work out believe him. These two riders will race tonight a distance of twenty kilometers.

League Meeting Tonight.

At Beardsley's tavern tonight, there will be a meeting of the league officials to settle matters pertaining to the new season, and to give general satisfaction. The man mentioned for the job is Bill Hoffer. He unspired a few games here and there and gave general satisfaction. He amused the fans greatly by his method of calling "Bowl one" and "Bowl two-high," etc. One good point about Bill is that he will not stand for any bluffing.

OUTSIDE EVENTS.

EASTERN BALL GAMES.

Denver Beats Colorado Springs and
Jumps Into Third Place.

Philadelphia at New York.
St. Louis at Boston.

Another Double Header.

New York, Sept. 5.—Pittsburg won a double-header from the New Yorks today. The afternoon without an apparent effort, Doherty pitched for the visitors in the first contest and held his erstwhile clubmates safe for the six innings that he was in the box. Hester, a young pitcher from Orange, was given a trial in the second game. Attendance, 2,300.

TODAY'S GAMES.

Boston at Milwaukee.
Philadelphia at Detroit.
Washington at Chicago.

Each Won One.

Chicago, Sept. 5.—Washington and Chicago split even on their double-header today, the locals winning the first in the fifth inning on two singles and an error. Two gifts, an error and a single started Washington off with three runs in the second game, three passes, a single and two doubles giving the Chicago five in their half. Patton then steadied and pitched a good game. Attendance, 4,000.

Two More for Phillies.

Detroit, Sept. 5.—Philadelphia took the first game of this afternoon's double-header by reason of Detroit's errors, but hammered Owen all over the field in the second game and won easily. Holmes' miff in the first game let in two runs, and Miller's left throw into the bleachers was responsible for three more. Besides the locals could not hit Witte. Attendance, 3,500.

No games scheduled for today.

Denver Takes Another.

Colorado Springs, Sept. 5.—Today's game brought the baseball season in this city to a close. Denver won in the tenth on a base on balls, a hit and two costly errors. With a 1-0 exception, both teams put up a fast fielding game. Evans, the new pitcher of the locals, was a trifle wild at times, but allowed only four scattered hits. Attendance, 1,000.

LORD DERBY WINS.

Defeated Thomas Lawson's Famous Boralma Yesterday Afternoon.

Hartford, Conn., Sept. 5.—A big crowd at Charter Oak Park this afternoon witnessed the defeat of Thomas Lawson's celebrated gelding Boralma by C. J. Hamlin's Lord Derby. The race between these two was one of the finest of the year and it was only after five heats had been trotted that the Boston favorite's colors were lowered.

The betting on the race, the free-for-all trot was very heavy. The starters were Boralma, Lord Derby and The Monk. As much as \$20,000 went into the race.

Thousands suffer from torpid liver, producing great depression of spirits, indigestion, constipation, headache, etc. HERBINE will stimulate the liver, keep the bowels regular, and restore a beautiful buoyancy of spirits. Price, 50 cents. Z. C. M. I.

SCIENTIFIC MISCELLANY.

What is described by Prof. R. W. Wood as the most startling illusion he has ever seen is produced with a lead pencil and a wire window screen in front of a sky background. The pencil is held point up an inch or two from the screen, and the eyes are focused upon the point, when the wire gauze appears blurred and doubled, but with a little effort the images of the mesh are brought out distinctly and apparently in the same plane as the pencil. On moving the latter away, it appears to pass through the screen, and the eyes are doubled, the images diverging until the point is stopped by the wire. If the pencil is now withdrawn, the sharp image of the combined images of the gauze remains on the moving eyes to within six or eight inches and attempting to touch the wire, the surprising discovery is made that the wire is not where it is seen. It is a couple of inches farther away.

The simple apparatus with which Prof. A. L. Mett, of Tulane university, produces air ice consists of a test tube a little more than an inch in diameter and 18 inches long, with a vacuum pump. Liquid air is turned into the test tube until it is two-thirds full, when connection is made with the pump. The air boils and bubbles, the temperature falling rapidly under the rapid evaporation, and in a few moments a lump of solid air about an inch in diameter remains in the bottom of the tube. In open air this block of air ice lasts about 15 minutes.

Natural electricity is thought by M. Berthelot to have much effect on plants. His experiments, partly on a tower 90 feet high, lead him to conclude that free nitrogen is important to plant life, that atmospheric electricity increases the ion of nitrogen, and that vegetables are obtained in high places without manure through the greater tension of the electricity.

A Swiss motor known as the "Motosacche," the invention of Messrs. H. and A. Dufaux of Geneva, appears to be one of the most promising of the numerous additions offered to the cyclist's outfit. The motor is of the internal combustion variety, fed by light petroleum oil, and differs from others in being practically self-contained—cylinder, combustion-chamber, battery, coil, carburetor and flywheel, with the various throttle, mixture and sparking levers, being fitted within a frame of bent tubes having a total width of only 3 inches. The apparatus can be attached inside the ordinary diamond frame in less than ten minutes. Only the driving pulley, which is placed on the rear wheel, and the ignition switch, which is attached to the handle-bar, are added to the machine proper, and the total weight of the motor is less than 20 pounds, while there is no interference with the re-riding of the ordinary bicycle. The tank holds oil for a run of 60 miles, the engine giving 14 horsepower at the normal speed of 1,200 revolutions per minute.

Life on Neptune, the outermost planet of the solar system and a greenish star of the eighth magnitude as seen from the earth, would be quite novel to us. Mr. C. T. Whittell, of the Leeds Astronomical Society, notes that the force of gravity is only about 39 that of our earth, and that the planet is 85 times as large as the earth, and the density is only 1.11, water being 1. Neptune's moon makes a revolution from east to west—the opposite direction from that of our satellites—in five days, twenty-one hours. The sun is about as large as Venus is to us, and the solar radiations are 90 times less than on earth, yet as much light and heat are received from the sun as we could get from 627 full moons, or 44,000,000 first magnitude stars, or from an electric arc of candle power at a distance of 395 feet.

With suitable dryness, the temperature endurance of the two-humped, or Bactrian, camel is most remarkable. These animals are kept in a part of Siberia where 53 degrees below zero F. is reached in winter, and specimens from the Altai and Gobi Deserts where Przewalski found the ground temperature in summer to be 140 degrees.

The building material of the near future, M. Jules Henrievaux predicts, will be glass. The foundations and walls of the houses will be of the latest in vented stone glass, which has shown a crushing resistance three times as great as granite, has proven less sensitive than steel to heat and cold, under friction wears less than porphyry and resists shocks of 600 pounds per square foot. The walls would be made of glass blocks, which would be held together by an iron, leaving a hollow space in which would be the pipes—also of glass—for hot air, water, gas, electric wires, drains, and other purposes. These houses would have stairs and balconies, ceilings and wall decorations, mantelpieces and fireplaces all of glass, and they may be washed throughout without leaving a trace of dampness, and will offer no place to which dust can cling.

A puzzling phenomenon has been the blackening of fields of buckwheat blossoms by thunderstorms. An explanation is suggested by the researches of Lemstrom, a German electrician, who has caused water to be sucked up through capillary tubes when an electric influence machine was worked some distance away. As the fluids of plants rise through capillary tubes, it appears that an electrical condition of the air may cause an unusual flow.

A remedy for the very fatal foot-and-mouth disease of the sheep, is being tested in France. It is a 52 per cent solution of chromic acid, chemically pure, which is applied as a caustic to the sore and gives a rapid and certain cure. Dr. Jarr, the discoverer, claims to have used the remedy with success in 1,500 cases in two years.

In a lot of market vegetables, Dr. Ceresate, of Padua, has found 52 species of bacteria, including three or four disease-producing kinds. If market-bought vegetables are to be eaten raw, he urges previous cooking for half an hour in a 3 per cent solution of tartaric acid, which is an agreeable antiseptic and so powerful as to kill in 5 minutes cholera spirilla in a salad.

HE WANTED "SHEEPS."

A young Frenchman, recently arrived in this country, found himself a pleasant boarding place in East Blank street, where most of the boarders were of long residence and were well acquainted—almost as members of a family. The Frenchman was a bright, intelligent, gentlemanly fellow, and was taken into full fellowship very soon. One night a little poker game was started—a "penny ante" game, or something of the kind. The Frenchman took to it very quickly and found it very fascinating. The next day he determined to purchase for himself a poker outfit to take back with him to France when he should return. So he went to a large department store and asked if they had some "sheeps."

"Upstairs," said the polite clerk, "in the toy department."

The young man went up two floors, and asked for "sheeps."

"Over in the far corner," said the floor walker.

When he reached the counter to which he had been directed a young woman whom he had made known his wants showed him a number of wooden sheep, with wool fastened on them.

"Pardon; we are not here," said the young man.

"Well, these are certainly sheep," said the young woman, "and they are very good sheep." Then a new idea came to her, and she added, "Of course if you want something cheaper, you will find some tin animals over at that other counter," pointing across the room.

find some tin animals over at that other counter," pointing across the room.

"But it is not 'sheeps' I want, but 'sheeps' I want not 'sheeps' ze animals, but 'sheep' to play wif."

"My dear sir, these are 'sheep to play wif'."

"I know what you want," she said. "Come with me."

He went with her and she piloted him over to a counter on which were piled miniature ships, yachts and so forth.

"There you are!" she exclaimed triumphantly.

"But it is no, not zis! It is 'sheeps' zat I want."

By this time it began to be the general impression on the floor that the man was crazy, and this was strengthened by his explanation that he wanted the "sheeps" for his "aunties!"

"They must keep a boarding house," whispered one girl to another, "and he has mistaken this for a grocery."

But a sophisticated man overheard the Frenchman's remarks, and said: "Excuse me, sir, but I think I understand what you want—poker chips, isn't it?"

"Surely! Sheep for poker! Zat zees eet!"—Kansas City Star.

HOW NATHAN PROPOSED TO THE WIDOW.

Nathan saw that his time had come. He sighed, cleared his throat, and began: "Widder, I been thinkin' a good deal lately, an' I been talkin' some with a friend o' mine."

"You have been prospered, Nathan," said the widow, looking at him in astonishment; then, as she perceived his drift, the tears filled her eyes and she asked, "Do you mean it, Nathan?"

"I wouldn't a' spent so much labor on a joke, widder."

"No, it don't seem like you would, Nathan. Well, it's sudden, mighty sudden, but I can't say no."

"These are all other blessings make us truly thankful oh, Lord, we ask for His name's sake—Amen!" said Nathan devoutly. And he sat another hour with the widow, making plans for the early marriage, on which he insisted.—Paul Laurence Dunbar, in Lippincott.

A WARNING TO YOUNG MARRIED FOLKS.

"There ought to be a law to punish young married people who go to live with the old folks," said Judge Robt. of the bench the other day.

He had heard two divorce cases in succession in which the bride's mother had given the young people a home and support from the day of the wedding and in each instance the husband had deserted after living on his mother-in-law three months.

"I will give your daughter a decree this time," said he to her mother. "The next time she gets married I want you to insist that she goes to 'keeping house.'"—Detroit Journal.

Many physicians are now prescribing Kodol Dyspepsia Cure regularly, having found that it is the best prescription they can write because it is the one preparation which contains the elements necessary to digest not only some kinds of food but all kind and it therefore cures indigestion and dyspepsia, no matter what its cause. F. C. Schramm, Prescription Druggist, McCormick building, corner Main and First South streets.

OGDEN CANYON EXCURSION.

Saturday, Via O. & L.
Round trip to Ogden, \$1.00. To the canyon, 25 cents extra. Special train leaves at 1:30 p. m. Special returning.
