Mr. Turner is highly plased with the showing so far and has every confi-dence in the mine and its future.

PLEASED WITH PLANT.

Officers of Utab Copper Express Satisfaction With Conditions at Garfield.

Charles M. MacNeill, president; and Spencer Penrose, secretary, of the Utah Copper company left last night for Colorado Springs after a visit of several days.

Mr. Penrose and Mr. MacNell made air, Penrose and air, anexwert made a thorough inspection of the new Gar-field concentrating plant and left with expressions of satisfaction as a result of their trip.

MANHATTAN IS LOOKING UP.

Nevada Camp Recovering From Effects Of San Francisco Disaster.

The beginnings of life have been lately studied by Miss Rina Monii in some of the newer lakes of the Alps. In the Lake of the Seracs, which has been form-ed within the memory of present in habi-tants, only five species of life are to be found, and these are all plants, four be-ing diatoms. In Ong and Tigoaga, two older lakes, animal forms-feeding upon the diatoms-have begun to appear. The observations make it evident that life in a lake begins with diatoms that absorb the carbonic acid dissolved in the water, and that the next stage is the develop-ment of simple animal organisms, like rhizopods, that subsist on vegetable forms already existing. Geologists have im-ferred that the first life on carth began in the ocean in this same way.

(Special to the "News."

Manhattan, Nev., Nov. 26.—The last week of November finds Manhattan in better shape than at any time since the San Francisco disaster. All the leading properties are showing im-

leading properties are showing im-provement while many new ones are coming into attention by reason of the splendid showings on their estates. The Indian camp strike, while being kept as secret as possible is proving an unusual one in the size of the ore body and its richness. This stock has increased 50 per cent in two days. The strike on the Independence Con-solidated, which at the grass roots showed six inches of ore running from \$500 to \$1,000 per ton, has, at 25 feet widened to over four feet with aver-

\$500 to \$1,000 per ton, has, at 25 feet widened to over four feet with aver-age values of \$150 and with a rich streak of over \$1,000. This stock can-not be secured as it is held by a few men of wealth in San Francisco. The big ore body on the 200 foot level of the Manhattan Consolidated is still being developed and it is evident that this stock ought to be selling for double its present price. The Stray Dog, Manhattan Combination, Mus-tang, Broncho, Wolftone, etc. are keeping up their record for good chowing. Some of the newer proper-ties that are coming to the front with good strikes, and that are destined to good strikes, and that are destined to become good properties are the To-quima Copper and the Bonanza Cop-per, the Ralston Valley Gold and Cop-per, the Manhattan Mammoth, all with good values and growing better daily with the progress of develop-ment. The most conservative are coming to the ballef that within six months Manhattan will equal if not surpass the greatest camps the coun-try has ever seen. try has ever seen.

A newly suggested test of death-claimed to be infailible-depends upon the alleged fact that hydrogen sulphide al-ways forms in the lungs within 12 to 24 hours after death, and finds its way out of the body through the air passages. The presence of the gas is determined by placing in the noatril of the supposed corpse a plece of absorbent paper mois-tened with a solution of lend acetate. The paper is blackened by any trace of the gas, but remains unchanged if life still angers in the body.

The new fly of East Africa, described by W. Donitz as Cordylobla Murium, was discovered by Dr. Robert Koch as para-sites in the skin of rats suspected of plague. Files hatched from the magnots in just one month. It is supposed that the eggs are laid in the earth, and that the larvae attach temselves to the parts of the rats touching the ground. Larvae of another fly of the same genus are found in boils of railroad builders in Guinea. Guinea.

The new gliding boat made in Paris by Levavasseur and Lein consits essentially of a light, pointed main section, which is connected by a light wood platform two feet long to a large flat tail 30 feet long. The forward section contains the meritor, from which a shaft runs to a pro-peller in the tail. The tear end of the tail is almost submerged, while the for-ward end and the main boat float on the surface, and are almost lifted out of the water by the action of the propeller. The new 50-horsepower eight-cylinder An-toinctic motor is used. In caim weath-er, the new form of boat glides very rap-ising on the surface of the water, and in rough water—this being the special ad-vantage claimed over sliding and ordi-nary boats—It is able to run at fair speed.

The artificial cork of a recent French patent is made of a mixture of amor-phous cellulose (nich of rushes, powder-ed cocoanut shells, or paper pulp), n-brons cellulose (thistledown, textiles or capario pulp), and agglutinating cellu-lose (solution of nitro-cellulose), (diasa-lined moulds with small holes for the es-cape of vapors, are used to shape the pasty composition. The volatile est vanits of the nitro-cellulose is devinated, the works are removed from the moulds, and the nitro-cellulose is denitrated by a re-ducing agent. The finished material is given resistance to water by dipping into tungstic acid.

Tuberculous patients that live and row fat are reported by Dr. Guilhand, French physician. He has found a orm of tuberculosis that remains in the condition of a local lesion, is usually as-occluded with an excessive deposit of objects tissue, and is curable. He believes t arises from implanting attenuated occh baccili in so-called scrofulous per-ions.

While the average man is satisfied with a maximum of 32 teeth, a Turk near Bal-burt, in Asia Minor, boasts of 45, all perfect. He belongs to a well-toothed family, his mother and a sister each hav-ing the same number.

ing the same number. Acetylene is now carefully rurified, in dissolved form, safety in using the compressed gas being thus ensured. Cy-bidders of any desired size are filled. Cy-such porous absorbent as asbestes or a special charcoal cement, making explosion in the evilader impossible, and the porous material is then soaked with a fixed liquid having the peculiar property of ab-sorbing 25 times its own volume of neety-ing 25 times its own volume of neety-ent atmospheric pressure and 69 de-frees F., and a greater properition at increased pressure. In practise, the acet-on is so regulated in quantity that the evilladers contain 10 times their own vol-ume of acetylene for every atmosphere of mospheres, the cylinders contain 100 times nor than when the undissolved gas is compressed in the ordinary way.

A register of sanitary hairdressing ea-A register of sanitary hairdressing ea-bishishmonia, with a penalty to comply with the regulations, is a plan of the health officers of Budapest. Among the register regular customers should provide the own tollet regulations, they all shows and fittings should be milled of glass, that the use of putfs should be gowder, that a barber or hairdressor about refuse to attend a customer ap-matic and that all register and combs should be kept five minutes in a 5 per ent solution of sodium carbonate. La-dited by minutes.

Wood at Eight Dollars a Pound.

"French walnut is the finest wood we have," said the exclusion maker. "It comes from Persia, but it is prepared in France. I have seen French walnut worth \$8 a pound, and it is a common thing to pay \$2 a pound for it. Of course it is used prin-cipally for veneering. Only millionaries could have chairs and tables of solid French walnut.

French walnut. "Mahogany, wonderful as it is, rarely fetches such high prices. From \$2 to \$3 is a very good price per pound for this wood.

wood. "Ebony, if it is in a particularly large plece, so that it will cut well, will often bring \$5 a pound in the wood market."

, Stock don't sell it now. But if. you need money and must sell, call and see us and we can sell it for you at the market price.
