Rocky Mountain Bell Telephone Co's Building.

Wm. S. McCornick.

P. T. Farnsworth.

A. W. McCune.

Wm. H. King

Hon. A. W. McCune is perhaps as conspicuous an example of the self-made business man on the state affairs, having risen from a very small beginning when still in his minority, and, starting with nothing except energy and a bright, active mind for his capital, he has forged ahead until he is now one of the most important men in the state. He is now in a new mineral country from the railroad through the mining districts of Stockton, Ophir, Dry Canyon, Rush Valley, seventy-five miles south of Salt Lake City, and the Deep Creek country, in Tooele county, about one hundred miles west of Salt Lake City.

Mr. McCune is now in his forty-second year, having been born in Carnarvon, Wales, being the eldest son of Alexander and Ann McCune. His father, a Methodist minister, came to America in 1857, and settled at Ogden, where he engaged in milling. He was always of a struggling disposition, and during these early years, when the country was new, and the people were poor, he was compelled to struggle hard to make a living for his family. Young McCune was early put to work in the fields of his father, and when old enough to handle a team he was put to plowing, harrowing, etc., and during the summer months he worked at various occupations, sometimes herding cattle, sometimes as a teamster, and sometimes as a miner, so that the term implies, for he has had a varied experience in all of the departments of mining and smelting, and that has been of great benefit to him in his present business. He has learned not only the art of mining, but also the art of handling men, and that he considers one of the most important lessons he has learned. He was always ambitious to be something better than a miner, and when opportunity offered he left the mines and went to work in the smelter, where he remained for a number of years, working his way up from the bottom to the top. He was employed in the Germania smelter at Ogden, and when that was closed down he went to the Colorado Smelting Company's works at Pueblo, Colo., and from there to the Grant smelter at Denver, Colo., and then to the Omaha & Grant smelter at Omaha, Neb. He was employed in the Omaha & Grant smelter when the Mammoth mine, at Tintic, was discovered, and he was one of the first men to go to that camp. He was employed by the Mammoth company for a number of years, and was one of the men who helped to make that mine what it is. He left the Mammoth company to go to the Ontario mine, at Park City, where he was employed for a number of years, and was one of the men who helped to make that mine what it is. He left the Ontario to go to the Daly mine, at Park City, where he was employed for a number of years, and was one of the men who helped to make that mine what it is. He left the Daly to go to the Daly-Judge mine, at Park City, where he was employed for a number of years, and was one of the men who helped to make that mine what it is. He left the Daly-Judge
