

MINING, BUSINESS AND STOCKS

SALES ON THE MINING EXCHANGE

Less Interest Than Usual Manifested in Seven Troughs Mining.

UNCLE SAM REMAINED FIRM.

Transfers of Other Tintle Stocks—Closing Quotations and Sales.

Although business was fairly active on the floor of the mining exchange today and the sales were well distributed, the values involved in the transactions did not foot up to yesterday's totals. Interest in Seven Troughs Mining, which has been up to a high pitch during the past few days, seems to be on the wane. However, 5,000 shares were brought out with sagging prices.

Uncle Sam consolidated held remarkably steady around 42 cents. May Day came out at 27 cents and Beck Tunnel at 51 and 52 cents. Colorado sold as high as \$2.25, and as low as \$2.17. A small lot of Daily Judge brought \$3.25 and a board lot of Daily West sold at \$3.

The unlisted stocks were inactive. Ohio Copper was offered down to \$2.60 with no takers.

The closing quotations and sales were reported as follows:

COPPER MINES OF LAKE REGIONS

They Showed an Increased Output of Red Metal During Last Year.

SOME CURTAILMENT NOTES.

Production Placed at Two Hundred Forty Million Pounds—Increase of Other Years.

Of all the copper fields of the United States, says a Houghton, Mich., correspondent, the Lake Superior district is the only one that shows an increased output in 1907. Arizona, Utah, California and probably Montana as well, would have shown gains but for the general reduction of forces or closing down noted in the western fields during the latter half of the year. In the Lake district the Bigelow mines, which are rather closely allied with the Amalgamated, have reduced forces and production, but none of the other mines have paid any attention to the reduction in prices, and the general halibuto of the metal market. The action of the Bigelow mines in reducing forces is not liked locally and will not add to the popularity of the eastern management in the light now on between the Calumet and Hecla and the Bigelow people for control of the Mesquite. The production of refined copper by Lake Superior mines for the year 1907 was 229,481,279 pounds, these figures being about 5,000,000 pounds greater than any previous estimate, but being final because obtained direct from each reporting company. The error in previous figures was caused by the reduction of the Calumet & Hecla, given erroneously as 95,000,000 pounds, while the actual production was 100,023,420 pounds. For 1907 the production was about 200,000,000 pounds, a trifling increase, but the Calumet & Hecla has been for three years past the largest producer of copper of any mine in the world. The 1907 output of the Lake district as a whole is approximately 240,000,000 pounds, a gain of a trifle better than 4 1/2 per cent. Lake Superior copper production fell short of 200,000,000 pounds in 1904, and never was as great as 150,000,000 pounds until 1901, while in 1895 the output was only 128,350,749 pounds, or a trifle more than half as great as in 1907. Twenty years ago, in 1887, the production was only 76,028,697 pounds, or less than a third as much as was made in the year just passed.

YAMPA MATTE.

Speculation as to Where It Will Go When U. S. Plants Close.

What is the Yampa Smelting company going to do with its matte product when the United States smelter closes down? The question has been asked on the street many times during the past few days.

A report is out that the Yampa matte will be accepted at the United States smelter after the 15th inst., but at the offices of the Yampa company no such notice had been received up to this time. It was stated that if a communication of this kind had been sent out, it must have been addressed to General Manager Saxman, who is now in New York. However, if the matte has been given, the local office will soon know of it. General Manager George H. Heintz of the United States Smelting company, was absolutely non-committal on the subject when seen today.

THE OPEX MINE.

Big Force Employed on Development At Present Time.

Outside of the big Centennial Eureka, the Opepe mine in the Tintle district, is one of the most active propositions for development at present. It has been given the name of Opepe, but the owners are pushing a vigorous campaign of development and employment is given to a force of over 50 men. The work is being done in the Opepe shaft, which is superintended. The shaft is down 300 feet, and that is as far as it will be taken until the various levels are prospected and developed.

BUYS ZINC PLANTS.

United States Company Branches Out Into New Field.

From an eastern source it has been learned that the United States Smelting, Refining & Mining company has purchased a control of the stock of the American Zinc and Lead company, which operates zinc plants in Kansas and Missouri. The former has also taken over the Blake electrostatic separator patents. Judging from the foregoing the United States company is evidently getting ready to reach out for zinc as well as other classes of ore.

PARK CITY NEWS.

Wahash Company Employing Regular Force on Development.

Special Correspondence.

Park City, Jan. 9.—During the month of December, 16,880,583 pounds of ore were shipped from this camp, the apportionment among the mines being as follows: Silver King, 5,764,940; Daily West, 6,411,125; Daily Judge, 4,417,343; American Lead, 219,840; New York Bonanza, 66,749.

Conditions here are about the same as they were a week ago. Both the Silver King and Daily Judge companies are giving employment to a few men; while the Wahash is working the usual force on development. Altogether, over 300 men are employed in the various mines at the present time and nearly all of them have families to support.

The Grissall Chemical company, which is building a plant for the treatment of the zinc ore of the Daily Judge mine, is making good progress with construction. The plant will probably be ready to operate within 60 days.

ANNUAL MEETINGS CALLED.

Notices were sent out today to shareholders of the Yampa Consolidated and Blackbird Gold and Copper companies announcing the date of annual meetings. The Yampa meeting occurs on the 27th and the Blackbird on the 28th inst.

UTAH CONSOLIDATED REPORT.

The annual report of Manager Risque of the Utah Consolidated has been completed and was forwarded to the eastern offices of the company today, from which place it will be made public a little later on.
