DELAYED BY A LAND SLIDE.

Col. O. P. Posey Arrives and it is Said to Push the Smelter Project Through.

Col. O. P. Poscy arrived in the city vesterday afternoon, after being delayed on the Central Pacific by a land slide. Col. Posey is here in connection with the much talked of smelter for the Birgham Copper and Gold company's pyritic ores. It has been known for some time that the plans for the proposed smelter have been arranged but on account of hitches between Allan G. Lamson and the company as to the site, nothing has been so far de-cided on positively. Mr. W. H. Nutting, who is considered an authority in his line of work, was expected here to-day to consult with Colonel Posey and Mr. Lamson. While nothing can be learned positively, it is stated that the smelter project will likely be pushed to

## NEW COPPER DISTRICT.

A Valuable Silver Camp has a Heavy Sprinkling of Copper in its Ores. Twenty-four miles from Weiser, Ida. is the valuable silver camp of Mineral, with a heavy sprinkling of copper in several of its ores, says the Signal. Immediately back of the camp is Iron Mountain and on the east side of Iron Mountain, at headwaters of Mann and Monroe creeks, is what is no doubt the source of the copper of Mineral Wirt Campbell, who is in from Mineral states that the deposit of copper on the east side of Iron Mountain has been known for a number of years, but there has never been a great deal done. Mr. Campbell made the original locationthe Last Chance-years ago, but has only kept up the assessment work. With the advent of the P. & L N. railway bringing with it the copper era for this county, the district is bound to be brought to the front. It lies on the great mineral belt which has brought forth Seven Devils and Ruthburg, and which belt is certain to assume a position in this State similar to the great Oquirrh range in Utah, with Mercur, Tintic. Ophir and a dozen other camps. There are now nineteen locations hearly all of which will be developed the coming season. The feature of the ocality is a large iron dyke 400 feet wide, between porphyry, cutting through the country. The copper ore occurs on each contract. The veln on the Last

## Chance is four feet wide and assays ten per cent copper. WINNAMUCK PROPERTY.

Preparations Are Being Made to Operate the Mine and Mill This Winter.

The Old Winnamuck, practically idle for more than a year, it is understood is under bond to James Campbell, and leaning-up work about the mine has begun preparatory to operation this We understand the mill in conwinter. nection is also to be overhauled and put in motion, on dump ore and second-grade now stowed in drifts or ready for

stoping. The mine and mill are to be superintended by J. C. Whiting, the well-known old Colorado miner, whose success with properties with histories similar to that of the Winnamuck is proverbial. He is a thoroughly pracitcal, safe man, and should the old mine begin to smoke again it will be a sure thing there is fire. It is to be regretted that complications have so long kept valuable property in idleness .-this

## WYOMING COAL DEPOSITS.

Extraordinary Development-Represents a

Market Value of \$15,000,000. The annual report of the State inspector of mines, just filed with the governor, shows an increase of coal production over the year previous of nearly 1,000,000 tong. The industry

many years by J. I. Crutcher. Some months ago he entered into a contract with Major Fred R. Reed for the development of the property under which contract Mr. Reed secured an interest in the mine. The property has now been incorporated, the company being called the Pauper Mining Company, limited. The mine makes some water, which is now taken out in a bucket, it requiring about two and one-half hours out of the twenty-four to keep water down. It is proposed to drain the property by means of a siphon. The hillside is very steep there and it would

be possible to locate the outlet of the siphon 500 feet lower than the sump in the mine. The idea is a novel one. It meets the approval of mining men to whom it has been suggested but the subject will be carefully investigated. by competent engineers before the plan is put into operation.

#### The Week in Bingham.

In its weekly resume of the mines in the "Old Reliable" camp the Bulletin says A boarding house with accommoda-

toins for twelve to twenty men is building at the Ben Butler mine.

Material for completing Bingham C. & G. branch of Standish & Jimpson's tramway is now about all on the and weather permitting the ground. coadbed should be all down next week. Jumpers and relocaters were not very active on the 1st. Recorder Quinn received but nine notices of location Mon-Claim owners were unusually day. prompt with assessment work last fall. A number of properties, including Mountain Chief, Montezuma, Phœnix and Zelnora, are ready to ship, but prevented by condition of the roads, snow laying quite deep and soft on upper grades, while in lower canyon is bare ground

Good reports are coming from Butte & Bingham company's claims, and no doubt they will be in the shipping list next spring. In the old Mirror several days ago an ore streak suddenly widened out to five feet, and there is little doubt a big ore chute will soon be showing.

Starting Monday the Red Wing mill Wednesday night had knocked out a carload of concentrates and was then obliged to shut down for want of coal. Something nearing a coal famine is prevailing, and unless supplies are forthcoming within a day or two some of the mines will have to suspend operations. It wil be a serious matter if the Dalton & Lark, West Mountain placer and others having much water to contend with are included.

AT THE DALTON AND LARK.

The Dalton & Lark yesterday finished a 12-car shipment of ore taken from 950 level and bottom of shaft-reported to have been very fine truck. Some stoping is now being done, and 950 drift north is running in 7 feet of ore-3 feet of first-class returning way-up assays. The big pump had all been delivered yesterday, and will be at work as soon as it can be put in place-station being ready to receive it. The mine is not as reported short of coal-having a sufficient supply for the present.

### Motion is Denled.

The secretary of the interior yesterday denied a motion for review in the case of O'Donovan vs David Keith. The commissioner of the general land office set aside Keith's proceedings for patent the mining ground claimed known as the O'Donovan and group, and this decision was affirmed by the secretary. The secretary now refuses to disturb his former decision. Goodwin & Van Pelt were O'Donnovan's attorney's.

#### Unitted Staes Mines.

In reference to the report that the United States mines would probably be closed down for a time, the Bingham

Bulletin has the following: A rumor has prevailed in Bingham this week that the United States mines were letting out men and about to shut down. We are assured by Superin-tendent Mayberry that there is to date to shut

## THE WEEK IN WALL STREET.

New York, Jan. 6 .- Wall street week-Investment buying has review: maintained the level of prices of railroad stocks during the week. Large offerings have been absorbed to take profits on the sharp recovery from the recent panic level of prices. A large bear interest was caught heavily short in some of the industrial stocks and their urgent demand caused some excited advances. Strength in the trunk line group, led by New York Central, has been the feature of the railroad list. The money market reflected the effect of dividend and interest disbursements in a condition of growing ease, which further exports of gold did not serve to prevent.

# AMERICAN RAILWAYS.

If the progress made by the railroads may properly be taken as a basis for comparison, the development of this country has increased about 100 per cent in the last eighteen years. The Railway Age says that the railway system of the United States has doubled in extent and far more than doubled in efficiency and usefulness since 1880, and makes the following comparisons: 1880. 1898

Miles of railway ..... 93.262 Miles of track..... 115,647 Miles of steel rails.... 33,680 Miles of iron rails..... 81,967 Miles of iron rails..... 81,967 Number of locomotives 17,949 Number of passenger

12,789 25.844 cars .. Number of freight cars 539,255 1,284,807 While the miles of lines have doubled, the miles of track have increased 112 per cent, showing a greater proportion of sidings and supplemental tracks. There are five and one-half times as many miles of steel rails as in 1880, while the mileage of iron rails has decreased 70 per cent, to a little over 24,-000, and will soon disappear entirely. The number of locomotives and cars has much more than doubled, but this gives no idea of the vast increase of capacity that has been effected by increasing the weight of engines and the size of cars. In these respects, especially, the last eighteen years have witnessed a marvelous advance on American railways.

WOOL PRODUCT FOR '99.

The American Wool and Cotton Reporter estimates the supply of wool in the United States at the close of the year, exclusive of manufacturers' holdings, at 157,398,879 pounds, against 329,-033,853 pounds a year ago. Sales in the three principal markets of the United States totaled 514,947,920 pounds, against 230,486,385 pounds last year. The wool clip of the country is placed at slightly less than 275,000,000 pounds, against about 200,000,000 last year. At the beginning of the year the total available supply of the country was about 340,-000,000 pounds. Importations have been exceptionally small, those at Boston being only 34,372,341 pounds, against 40 .-923,024 pounds last year. Owing to the large demand for wool for consumption, the total available stock on hand at the close of the year has been reduced to a comparatively low point. There is a scarcity of fine wools the world over; foreign markets have been advancing by leaps and bounds; the Australian clip, which again shows a material reduction, has been eagerly bought by anxious users of wool; the
