TUTT'S PILLS

TORPID BOWELS and DISORDERED LIVER.

From these sources arise three-fourths of the diseases of the human race. These symptoms indicate their existence: Loss of Appetite, Bowels costive, Sick Headache, fullness after eating, aversion to exertion of body or mind, Exaltation of food, Irritability of temper, Low spirits, a feeling of having neglected some duty, Dizziness, Fluttering at the Heart, Dots before the eyes, Highly colored Urine, CONSTIPATION, and demand the use of a remedy that acts directly on the Liver. As a Liver medicine TUTT'S PILLS have no equal. Their action on the Kidneys and Skin is also prompt; removing all impurities through these three "scavengers of the system," producing appetite, sound digestion, regular stools, a clear skin and a vigorous body. TUTT'S PILLS cause no nausea or griping nor interfere with daily work, and are a perfect

ANTIDOTE to MALARIA.

PRICKLY ASH BITTERS

The majority of the ills of the human body arise from a derangement of the Liver, affecting both the stomach and bowels. In order to effect a cure, it is necessary to remove the cause. Irregular and Sluggish action of the Bowels, Headache, Sickness at the Stomach, Pain in the Back and Loins, etc., indicate that the Liver is at fault, and that nature requires assistance to enable this organ to throw off impurities.

Prickly Ash Bitters *are especially compounded for this purpose. They are mild in their action and effective as a cure; are pleasant to the taste and taken easily by both children and adults. Taken according to directions, they are a safe and pleasant cure for* Dyspepsia, General Debility, Habitual Constipation, Diseased Kidneys, etc., etc. *As a* Blood Purifier *they are superior to any other medicine; cleansing the system thoroughly, and imparting new life and energy to the invalid. It is a* medicine and not an intoxicating *beverage.*

EVENING NEWS.

Monday, - December 15, 1884.

THE NEW INLAND SEA.

ONE OF THE GREATEST OF LAKES FOUND ALMOST AT OUR DOORS.

The statement published in many newspapers that the reported discovery of a lake of vast extent in the northeast territory is a hoax, is entirely false. The expedition sent out last June by the Geographical Society of Quebec has discovered the great inland sea which rumor has for nearly two years incorrectly identified with Little Mistassini Lake of the maps.

F. H. Bignell, of this city, who left in June in command of the transport expedition to the Great Lake Mistassini has returned home. He preceeded the main expedition in charge of John Bignell, P. L. S. and explorer, and A. J. Lowe, of the Geological Survey of Ottawa, with the necessary provisions and stores for its anticipated stay of eighteen months or two years.

Mr. Bignell left Chicontimi laden with canoes, and assisted by nineteen men, chiefly Indians, with great difficulty he reached the northern boundaries of the Province of Quebec. This is the summit of the watershed. The elevation, however, is only about eight feet, and an ordinary observer would be unable to appreciate the change which this great watershed makes in two great river systems of America. The streams on one side rush northward to Hudson Bay, and on the other southward by the Saguenay.

The Party then crossed into Rupert's Land, now commonly known as the Northeast Territory. After eight or nine miles' canoeing, or 350 miles from Lake St. John, the party reached Foam Bay, the southwesterly extremity of the great Lake Mistassini, and eighteen miles further on the lake they reached the Hudson Bay Company's post, where provisions were left for the main expedition.

Mr. Bignell says the general trend of the great lake, as far as known, is from southwest to northeast, stretching away from Foam Bay and the Heights of Land in the southwest to an unknown distance toward East Maine and Labrador. In fact, no one at the post of the Hudson Bay Company, servants or Indians, could say what were its dimensions or where it ended, and no information was on record there on the subject.

The only thing certain known about it was that it seemed to be an expansion of the Rupert River, just as the great Western lakes are an expansion of the St. Lawrence. At a point distant from the post about 120 miles to the eastward, the Rupert River intersected from the eastward, flowing from Little Lake Mistassini, which is only another expansion of the river, and which observes the same general features of the great lake, but lies between it and the heights between the two watersheds. From September 10 to the 17th he voyaged on the great lake, noticing the low lying character of its shores, the deep and numerous bays with which they are indented, and the enormous depth of its water, which renders it navigable by almost any sized craft. Occasionally islands were met with. Some of them were very beautiful, and others were pretty large. Upon one of these he was waterbound for some time, the sea on the lake running mountains high.

On the 17th 120 miles of navigation had been made, and yet the body of the lake, which had gradually expanded, had not been reached. He feels satisfied that the great Lake and its satellite form no part of the Saguenay system, but lie beyond it altogether in Rupert's Land.

It was said that the Hudson Bay Company have had their agency there for upward of a hundred years, but have held it a secret that a lake of such dimensions ever existed. The size of this body of water is supposed to be as large as that of Lake Superior.

Trade is carried on at the post of the Hudson Bay Company by giving Indians provisions and outfits in exchange for skins and furs. No money is used, and though the Indians have heard of strong liquor they do not know what it is. There are usually thirty to thirty-five families in the neighborhood of the lake, and they are called the Montegnegais tribe. They are of fine physique, but are a degraded race, and of filthy habits. They are nominally Christians, the post being visited about once a year by a Protestant clergyman from Moose Factory, on James Bay. They are strictly honest, but very superstitious.

Mr. Bignell says the lake waters are very like the waters of Lake Superior, and actually swarm with various species of fish, including huge lake trout, speckled trout, river trout, fresh water salmon, large pike, pickerel, perch, white fish, and a species closely resembling cod. The fur bearing animals include beaver, lynx, otter and black bears, all of which are numerous.

The region around the lake and its banks is well wooded. The general character of the region is flat and undulating, with occasional tracts of excellent arable land. The whole, as far as could be judged, rests on a limestone foundation, and outcropping rocks show promising mineral indications.

At the Hudson Bay post Mr. Miller raises fine fields of potatoes. He also raised all sorts of vegetables this year and had a fine crop of peas in full maturity. The climate is very agreeable. The highest mark the thermometer reached for some years was 120 degrees above in the summer in the middle of August, and the coldest weather experienced was 20 degrees below zero. The main body of the lake never freezes over until January, and breaks up about June.

On his return trip Mr. Bignell took a different route from the one taken to reach the lake, and came by Rupert's inlet.

Mr. Bignell on his return trip failed to meet the main expedition, but thinks they have arrived safely and are at work.—*Quebec Cor. N. Y. Sun.*
