

MINING, BUSINESS AND STOCKS.

THE DEAL IS NOW PENDING.

Reported that J. H. Conrad's Madisonian Group May be Sold.

THE EXODUS FROM DAWSON.

Not to be Attributed to Bad Mining Laws—Expensive Development Work in Coeur d'Alene.

Frank Turner of the Madisonian mine near Norris, in the city, being confined to his room in the Butte hotel with a serious cold that threatened at one time to turn into pneumonia, says the Butte Miner. Mr. Turner came in from the mine Saturday and the previous day drove from Norris to Sappington with the thermometer down below zero. When seen at his room yesterday by the Miner Mr. Turner said that several parties had been treating for the Madisonian group of properties and the mill, but that no deal had yet been made.

The property is owned by J. H. Conrad of Salt Lake and Frank and R. B. Turner. Frank Turner is not particularly anxious to sell and if he were not in poor health at the present time would be very much opposed to making a sale, but his physician has ordered him to go to a lower altitude. Mr. Turner has always had great faith in Madison county as a good producing district and at one time with his brother owned the Revenue mine. They said that for a good round figure after they had developed it and made a great mine out of it, but a few months after selling it the new owners took more than enough to cover the price they paid for it, and the property was good paying proposition for several years afterward.

Mr. Turner brought in with him Saturday a \$4,000 gold brick from the Madisonian mill. Expecting that the sale to the War Eagle people had been made no work was done in the mines for about a week, but the cyanide mill was kept running right along and since the first deal dropped through the men have been put back to work in the mines. The mill has a capacity of 40 tons per day and about 30 miners are employed in the property.

FULLER'S EARTH.

A Large Deposit is Located Near Richfield, Sevier County.

S. F. Mount and three other persons from Marysvale and Salt Lake have located 80 acres of land in Flat canyon, between here and Elsinore, to cover a big bed of Fuller's earth which exists there. The deposit is in three strata, the smallest being two feet in thickness and the largest twelve feet. It is 300 feet wide and of unknown length. Samples which have been tested are pronounced of first-class quality.

Fuller's earth is a kind of soapy clay which is used in making toilet powders and for washing and scouring wool. With such a large deposit it should be an incentive to establish a wool scouring plant in this valley. It can be loaded on cars with little trouble and expense. The deposit will undoubtedly prove a valuable property for the locators.—Richfield Reeper.

THE DAWSON EXODUS.

Klondike Papers Comment on the Rush to Cape Nome Beach.

From statements appearing in late copies of the Klondike newspapers it appears that the report of the Dawson exodus to Nome contains more truth than poetry, says the Seattle Post-Intelligencer. The Sun of the 23rd, in a leader, called a warning to Canadian newspapers, makes some very startling statements regarding this exodus down the river. The animus of the article is directed against a local contemporary, but the news is found in the following:

"The yellow rag makes it appear that the rush to Nome from Yukon is caused by the bad mining laws. We wish to say, leaving out the mining laws of Yukon altogether, the best mining laws in the world would be powerless to restrain the crazy rush which is now being made from Dawson. There are hundreds, of not thousands, who wish to leave good positions here, who will sell good paying claims, as they are already doing, for a song, and then join in the mad rush. They are already starting by the dozens, soon by the hundreds, in the dead of winter, on a 1,700-mile trip through the arctic country, without necessitating worth mentioning, to a dreary bleak spot, where fuel and provisions are to be had with difficulty, and where they have been told that gold can be dug out of the beach sand. Many will die on the way and not one out of ten will be any better off by their trip in the end, and yet claims would not hold them when the fever has taken them.

"Our mining laws are not the cause of the exodus to Nome, which has been pictured in these golden lights by interested transportation companies, and such places as Seattle, which can drive a trade thereby. These people who are preparing to rush from Yukon in mad haste will not find better laws in Nome or in Alaska."

SEVEN DEVILS COUNTRY.

F. J. French Talks of the Rich Copper Ore in the Blue Jacket.

Manager F. J. French of the Blue Jacket mine in the Seven Devils country is in the city for the purpose of purchasing machinery for the mine. In speaking of the district recently to a reporter of the Boise Statesman, Mr. French said, in answer to a question, that the Blue Jacket shaft being sunk from the 200 foot level had not yet encountered the main ledge, from which all the rich ore was being taken out above. The shaft was in a ledge, however, the ore from which assayed \$12 a ton in gold.

Mr. French said gold was coming prominently to the front in many parts of the Seven Devils district. On the northern slope of the mountain on which the copper mines were located many very promising gold ledges had been found. He had some claims there that made a good showing. He had obtained a number of \$300 assays, and the ledge in one of his claims sampled clear across showed \$34 in gold.

Speaking of the combination of copper and gold, the one predominating on one side of the mountain and the other on the other, Mr. French was reminded of recent discoveries in the

Heath district. There they have not only copper and gold mines, but silver and lead as well. He said a very strong silver-lead ledge had been opened up there, the assays running as high as 400 ounces of silver to the ton. Another ledge recently opened up contained ore that ran 13 per cent copper and as high as \$71 a ton in gold. Then there were other distinctively copper ledges, containing only a trace of gold.

"The Heath district is full of the varieties of mineral necessary to the operation of a smelter—lime, iron, etc., and it is my opinion that Cambridge, the nearest point on the railroad to the district, is the place to establish a smelter," said Mr. French.

Mr. French reported that the Boston & Seven Devils company was arranging to ship 1,000 tons of ore at once, teams already having gone to the mine to load. A car of ore would also be shipped soon from the River Queen mine as a test. This mine is owned by Mr. Haas of Weiser. Mr. French is more than ever pleased with the outlook for the Seven Devils. He believes it is going to be a factor in the world's copper supply, not an incident, and that some of the biggest and richest copper mines of the world will be located there.

Mr. French said the ore being shipped from the Blue Jacket contained 40 per cent of better a ton. The lower grades could not be made to pay after being shipped 70 miles on sleighs and wagons and then to New York. Mr. French said as soon as the railroad was completed the ore could be shipped at 20 per cent copper could be shipped at a profit.

COEUR D'ALENE CAMPS.

Three Two-mile Tunnels to Cut Ore Bodies at Great Depth.

Referring to the great activity in the Coeur d'Alene camps in Idaho, the Wallace correspondent of the Spokane Review says a surprising amount of tunnel work is now being done in the district.

The most important tunnels are being run by the Banker Hill and Sullivan, the Empire State-Idaho and the Morning Mining Companies, the former two at Warner and the latter at Mull. There is a striking similarity in the three in that each will be about two miles long when done; each will be from the mill level, the Empire State-Idaho having its new mill to build between now and the time the tunnel reaches the ore, each is the lowest which can ever be for the development of the properties, and each will cut the ore bodies about 700 feet deeper than they have ever been explored by any means except a diamond drill.

But aside from these mammoth undertakings there are a number of smaller ones there are others on a small scale on other properties, and a multitude of them on prospects where the owners are spending thousands of dollars simply because of their faith in the property after comparing the conditions surrounding it with those mines surrounded what are now the big mines of the district in the days when they too were merely prospects. Hunter mining district, the region surrounding Mull, has a number of small tunnels under which will be expensive affairs, but less than has been learned regarding that part of the country than almost any other.

Next to the big tunnel of the Morning the Hunter will come. While its new tunnel is not at the mill level, the ground slopes so gradually from it down to the mill that it is not likely that another one will ever be run, as the increased length of tunnel would more than counterbalance the gain in depth. When done it will be upwards of 4,000 feet long, and will reach the whole length of the ore chute from which the Hunter has paid its many dividends in the past.

Up Mill creek from Mull is the Independence group, now being worked under bond, and on which a tunnel 1,200 feet long is being run to reach the ore, and when that occurs it will necessarily be continued for hundreds of feet farther. With the Morning, You Like and Midland veins all running through the ground, if, indeed, they do not unite into one vein there, and with an abundance of ore on the surface, the only question is one of the extent of the ore body rather than of the existence of ore.

INDEPENDENCE COMPANY.

Incorporated to Work Some Claims in Utah County.

Special Correspondence. Lehi, Feb. 22.—The locators of the Banner prospect, situated just north of Alpine, nine miles from the American Fork O. S. L. station, met last evening and incorporated under the name of Independence Gold Mining & Mining company, for 200,000 shares at 10 cents per share.

The names of the incorporators are: Otto Hudson, C. F. Johnson, Jas. Chipman Jr., Jas. C. Clark and Henry Johnson.

This prospect where they are now working has an 18 inch vein of ore and the samples therefrom assay \$25 in gold and \$4 ounces of silver. Mr. Pearson, an expert mining man of Salt Lake City, who has been inspecting the claim, gave a very flattering report last night, as to the prospects of the mine.

The ore from this claim can be delivered right to the smelter for \$2 per ton and in the course of a few days work will be going on in full blast, as it is the intention of the company to commence shipping ore at once.

This prospect was originally located six years ago by C. A. Granger and S. J. Taylor, who continued to work the assessments for four years, after which they relinquished their right and Otto Hudson some time ago relocated it under the names of Otto Hudson, C. F. Johnson and S. J. Taylor.

The mining fever has again worked up quite an excitement in the locality, especially since the new strike in this prospect has been publicly known.

CLEVELAND MEETING.

Officers Elected—Work to be Resumed in the Near Future.

At a meeting of the shareholders of the Cleveland Mining & Smelting company held yesterday afternoon J. A. Brown was elected president, B. M. Harker vice president, and R. E. Miller secretary and treasurer. These, with W. J. Halloran and Henry Harker constitute the board of directors.

The company has some money in the treasury and it is intimated that work will be resumed at once. A short drift has been run off the Sioux-Alex tunnel, which is said to be in line, and while no ore has been found indications are said to be quite encouraging. An examination of the property will likely be made by the directors, after which drilling or sinking will be decided upon.

DELEGATES CHOSEN.

Well Known Mining Men Chosen to Attend Mining Congress.

In response to a request from Secretary T. J. Sullivan of the International Mining Congress, asking him to select delegates to represent Utah in the congress, which meets in Milwaukee on June 19th and 20th, Mayor Thompson has notified Secretary Sullivan, selecting the following well known mining men: E. H. Alais, R. C. Chambers, W. F. James, John J. Daly, J. C. Lynch, Charles Reed, John L. Webber, Thomas Kearns, P. T. Parson, David Keith, James Ivers, J. E. Bamberger and William Hatfield.

MINING NOTES.

Manager J. D. Clive of the Charm gold mine left for the Detroit district last night.

Mark L. Fletcher is getting up a company to go to Cape Nome in the spring to work a group of claims said to be already secured.

As the result of a recent strike in the Dixon mine at Bingham John T. Hodson reports a solid body of galena three feet in width.

Some good samples of galena were brought to town by Ed Stromness and A. A. Petersen from the Free Coinage district north of Grantsville.

The first carload of machinery for the new Saturn mine at Bingham has reached Riverton and arrangements have been made to haul it to the mine.

The new Daily-West directors were booked for a visit to the mine today, and after acquainting themselves with the workings of the great producer, will return tomorrow evening.

The turquoise mines in New Mexico are said to be doing well, the Boer war having increased the price of diamonds and started a large demand for cheaper gems.

A rich placer discovery is reported from the Salmon river, Idaho. Prospectors are said to be wading through snow to stake off claims. An ex-volunteer paid \$35 for the ground after he returned from Manila and is said to have taken out \$2,000 in coarse gold.

American Mining News: The Andacoma company produced 15,000,000 pounds of copper during January, an increase of 4,000,000 pounds as compared with December. This makes the production of the company for the last four months 50,000,000 pounds.

All arrangements are now perfected for the building of the new 100-ton cyaniding plant at Messrs. McCune and Hayes' properties at Deer Lodge. The Iron Works of San Francisco will furnish the material for the new mill which will be up-to-date in every particular.

Mining Reporter: At the close of the last month a big mining deal was consummated at Butte and the promised operations may prove to be one of unusual importance. The Old Joe and the Cleveland and Bland claims in the Pony district were taken under lease and bond by John F. Cowan of Butte, representing a company of western capitalists. The most prominent of whom are J. H. Clive, Salt Lake City, Mayor of Ogden, W. L. Nunn of Telluride, Colo., A. G. Malby of Chicago and the lessee.

IRON MARKETS ARE QUIET

Buyers Determined to Await Developments Before Proceeding.

All Branches of Trade Have Calmed Down, but Prices Hold Up Well.

New York, Feb. 22.—Discussing the condition of the iron and metal trades, the Iron Age today says: Aside from some sales of bessemer pig in Pittsburgh, aggregating about 20,000 tons taken by large interests, the pig iron markets are exceedingly quiet. Buyers of foundry iron all over the country seem determined to await developments until they commit themselves to the closing of a contract. They are waiting for a considerable time to come and they are willing to take their chances beyond that. Under the pressure there has been some weakening of prices and in isolated instances large producers have been forced to lower figures particularly for the second half. It is a fact, too, that a few consumers are beginning to ask that deliveries be not pushed. The event of the week in steel billets has been the closing of a contract between the leading consuming interest and large steel makers involving about 75,000 tons of steel for early delivery. Report has it that it is merely a conversion contract. In any case it relieves the pressure which has been exerted on the market lately.

The sheet consolidation under the auspices of the Moore party secures a very large tonnage to the national steel company, rising as it does to 500,000 tons annually. Practically this makes this large producer and its allied interests self contained, the tonnage of the tin plate, hoop and steel companies being very large in the aggregate. With some rail tonnage and considerable sheet tonnage in addition, the company has its capacity fairly well engaged.

The formation of the sheet consolidation has a great effect upon prices in the country, the territory to which the new consolidation is practically confined, although it does not even there find undisputed sway as yet.

The plate trade continues weak. A lot of about 2,000 tons for the Pacific coast has been sold at 100 cents, and some figuring is being done for lake ship yards. It is reported that consumers have a good deal of material still due to them on old contracts. The reports from the structural steel contractors are encouraging. Car builders are still coming into the market for material and have lately placed some notably good orders for axles and special forgings.

The rail trade is quiet, only small lots of light rails being placed with foreign buyers.

Copper has quieted down. Quite recently sales have been made in England at better prices than can be obtained here, when only a few months since lake copper was sold in Germany at considerably below our parity.

The London tin speculators have given the spot market another twist. The spelter market is developing more and more weakness, the largely to the fact that the demand from galvanizers is disappointingly light.

The tin plate trade is reported to be in excellent condition. One by one the idle plants are resuming work.

REVIEW OF WOOL MARKET.

Boston, Feb. 21.—The American Wool and Cotton Reporter will say tomorrow: "The wool market is very dull. Manufacturers are too busy in attending to the details connected with the orders which they have received, and some of them in getting started on their light-weight samples, to pay much attention to wool. They are generally well stocked with wool. They are therefore practically out of the market. What demand there is continues to be mostly for quarter-blood stock, both washed and unwashed, with a slightly better inquiry for three-eighths blood. Fine wools are in very limited demand. Grading quarters and three-eighths blood and below, are easy, and it is possible to save, in terms more favorable to the purchaser than formerly."

"The sales of the week in Boston amounted to 2,141,000 pounds domestic and 230,000 pounds foreign, making a total of 2,371,000 pounds, against a total of 4,423,000 pounds for the previous week and a total of 2,588,000 pounds for the corresponding week a year ago. The sales since January 1st amount to 28,421,000 pounds, against 27,000,000 pounds for the corresponding time last year."

Campbell & Greene, Stock Brokers, 16 West Second St. Telephone 624.

GOLD IN THE SEA SANDS.

Great Rush of Wealth Seekers to Cape Nome.

FLOCK TO NEW EL DORADO

Land Office Estimates that One Hundred Thousand Persons Will Go to Alaska—Jerry Rusk's Hook.

Special Correspondence.

Washington, Feb. 18.—Commissioner Hermann of the general land office estimates that 100,000 people are going to Alaska this year. He bases this upon the number of inquiries that are coming in to the office about Alaska lands, requests for maps and other information, together with information received from the transportation companies which handle the traffic to the big territory. It does not seem possible that 100,000 people could go there and live. Of course there is room enough for 100 times that number, but it will take an enormous amount of supplies for any such number, and they will have to be transported a great distance. Yet the rich goldfields have attracted the wealth seekers, as they have in every land where the yellow metal has been found. This year there is not likely to be such a rush to the Klondike, but the Cape Nome country will be the objective point. A friend who has been there tells me that 40 miles or more of the beach has already been taken up in claims along Cape Nome. This is the region where gold is taken out of the sands of the sea. The men who have been in Washington are telling wonderful tales of the riches in the other sections of the territory, and the prospects for an unparalleled rush is being made by the officials in consequence.

It is for this reason that legislation is being pushed to supply the army and courts and that the war department will dispatch troops as soon as the season opens, so that order may be preserved. The adventurous spirits of the world are flocking to the new El Dorado.

HE MUST PUSH.

"The duties of a congressman seem to consist in but one thing," said Representative Cushman of Washington, "and that is drive, drive, drive, or push. If you desire to do style it. First we have a letter from home asking that something be done in the departments. We take it up and perhaps find the matter pigeonholed and forgotten in the office. Our call brings it out from its resting place, and it is moved up a peg, with a promise of early action, with a view to finally winning the matter up. Well, we wait awhile, expecting the matter will be pushed smoothly enough, and then we hear from home again that the matter has not been pushed as we were promised. That necessitates another call, which results in moving the case up another peg, touched off by the usual promise. And so it goes. With each call the case is advanced a jot, and there it is sure to rest until you call again and move it up another. So, when you take hold of a matter, drive it away down at the bottom, you may conclude right away that you have a large job before you in getting it disposed of. You don't seem to do anything without continually nagging and pushing, and I tell you who have a large number of cases to be pushed you don't have much time to devote to purely legislative matters."

THEY WANT A HORSE BOOK.

The memory of Uncle Jerry Rusk, who was secretary of agriculture during President Harrison's administration, is kept alive in Congress by the constant and increasing demand for his famous horse book. He had prepared a book upon the diseases of the horse and giving much valuable information concerning that animal. More than a million copies have been printed, yet there is a clamor for more from farmers, stockmen and all others who raise or handle horses. Each year Congress authorizes a new supply, and now 200,000 are wanted by Congressmen for their constituents.

PRISONER OF THE SIOUX.

Down in Senator Nelson's committee room the other day I met W. F. Canfield, superintendent of the Indian school at Devil's Lake, N. D. The talk naturally reverted to the Sioux Indians, as it is a band of this tribe that occupies his attention. "I told him that I had been all over the Sioux country and especially the scenes of their greatest revolts against the whites, the wars of 1862 and the other war of 1856, when old Ink-o-die created terror among Spring Lake in Iowa and Minnesota. "I had that Spring Lake massacre recalled to me in an interesting way last summer," remarked Mr. Canfield. "Mrs. Sharp, who belonged to the famous Gardner family, suffered so much at the hands of the Sioux, was a prisoner for some months. She visited the Indians at Devil's Lake to learn if any were left who remembered her and could give her any information. She asked her if she remembered an Indian boy who came and fetched her from those who captured her to the chief of the band. She replied in the affirmative. 'I was that boy,' he said. 'My father sent me for you because he was afraid the Indians would kill you.' From this Indian Mrs. Sharp learned a great deal about her old home, which had been burned when she was carried away as a child."

ABSOLUTELY SAFE.

Examine the nails in your smith's shoeing box. If their edges are smooth for the whole length they are the Hot-Forged Putnam. If they show marks of the shears near the point, avoid them; they are cold-smithed and dangerous.

Massey ring, nickel plated, mailed on receipt of 10 cents in stamps or silver.
