DEFINING THE NATURE OF DEATH

Chicago Professor Makes Interesting Experiments.

SECRET OF ETERNAL LIFE.

Potassium Salts, it is Thought, Will Counteract the "Mortiferous Processes."

Chicago, Dec. 30. - Experiments which, it is asserted, are a beginning of the unraveling of the mysteries of death were made public by Prof. Jacques Loeb at the fourteenth annual meeting of the American Physiological society at the University of Chicago tonight. During the last summer the noted scientist has been continuing his series of experiments with the eggs of the lower marine animals, especially those of the sea urchin, and tonight, in a paper entitled "On the Prolongation of Life of Unfertilized Eggs of the Sea Urchin by Potassium Cyanide," he told a group of the foremost physiologists in America that by means of observation of the effects of certain chemicals upon these minute bits of protoplasm he was ready to make a tentative Schnition of the heretofore-unknown nature of death. Death. Prof. Loeb affirmed, was not

a negative process, a simple breaking down of tissues, as it has been re-garded up to this time, but an active agent born with the birth of the egg, and destined, if not checked, to gain upper hand of the life instinct and bring about extinction. But, greater even than the apparent discovery of this death agent in all life substance is Prof. Loch's announcement that he has been able to check the agent, in the eggs of the sea urchin at least, by means of chemical agents. This, it is id, means nothing less than that on a minute scale the secret of eternal life is in the power of mankind.

The experiments, Prof. Leob says, were simple. Unfertilized eggs of the sea utchin were placed in a weak solution of potassium cyanide and abandoned for several days. In ordinary conditions an unfertilized egg dies in a few hours, destroyed by the death agents born with it. At the end of several days the eggs were again ex-amired and were found to be still capable of fertilization and of producing healthy animals.

in explaining the results, Prof. Leob that the "mortiferous processes" were due to the actions of certain ferments of an unknown nature, whose destructive tendency was counteracted by the potassium salts.

Several other papers of importance were read during the meeting. Prof. D. J. Lingle of the University of Chicago gave the results of his research into the effect of common salt upon He affirmed with the heart beat. great emphasis that, contrary to statements of Prof. Howells of Harvard, salt is the sole agent responsible

The only solution o

meeting is a communication from W A. Rourke, who practically holds both the Western league and the American association franchises in Omaha. communication is in answer to one sent by President Hickey to the Omaha magnate, informing him that if he did not immediately pay an alleged debt of \$600 he would forfeit his American association franchise in that city.

It appears that the indebtedness is a note given by Mr. Rourke to President Hickey when Hickey was at the head of the Western league, collection of which had not yet been made by Hickey when he was deposed from that league. In his letter, received by President Hickey today Rourk e resents the threat to reject him from the association and declares he will, if necessary, take the is-sue to the courts. The Rourke letter came as a surprise and presented a new phase to the baseball situation that is causing considerable comment and not a little uneasiness among the magnates.

At the afternoon session the Omaha situation will, it is stated, be taken up in earnest. It is said a proposition to the Western league to withdraw from Kansas City will be considered. the American association agreeing in event of the older association taking that action to withdraw from Omaha This would leave the Western league with six clubs, MARKS

to Prevent Ringing.

New York, Dec. 31 .- Charles M. Jewett, secretary of the New England Trotting Horse Breeders' association, will idvocate at the coming congress of the National Trotting association, a system of branding harness horses to prevent the long prevailing fraud of ringing, This system of fixing the identity of trotting horses has been used many years on large stock farms where hun-dreds of horses are raised. It is said Azote, 2:04%; Arion, 2:07%; Sunol, 2:08%; Eleata, 2:08%; Cobwebs, 2:12, and other famous trotters bred at the late Governor Strandford's stud farm in California are branded under their manes with numbers which are regis tered in the private catalogue at Pal Alto, along with the name, age, descrip tion and pedigree of each horse. By means of these numbers a horse bred at Palo Alto may be easily identified, no matter where found.

The replies receiv-ed from that letter were mostly unfavorable, some of the clubs absolutely refusing to consider it. It seems, as you have probably been advised, that the Intermountain league would be unable to continue, and would be unwise to attempt to play baseball with a circult such as was under consideration, in the face of what seems to us to be an exorbitant railroad rate. By experiments upon the frog he demonstrated that a small amount of alcohol increased the working power of muscle, enabled it to make more rapid contractions in a given space o time and delayed fatigue; that, in short, it made the muscle a much better machine. In larger quantities, however alcohol was detrimental in all respects.
