

RICH STRIKE IN GRAND CULCH.

Over 4 Feet of Ore Which Averages 55 Per Cent Copper.

CENTURY GOLD BULLION.

Another Bar from This Promising Property—Rich Hydraulic Shipment from the Eureka.

Superintendent H. Jennings, of the Grand Gulch mine, in northern Arizona is very much elated over a recent strike in that property, news of which reached Manager Thomas W. Jennings today. A body of high grade copper ore has been opened up in the east drift on the 200 level, about forty feet from the cross-cut. The ore is 14 feet wide and is nearly underneath the main ore body in the upper workings. The vein dips at this point about 15 degrees to the north and Mr. Jennings is raising on the ore, which gives promise of opening out into a much larger body. The ore is very rich, an average of six samples showing 55 per cent copper. The highest assay obtained showed 77 per cent in the red metal, while the lowest showed 52 per cent. In addition to the copper values the ore shows 10 ounces silver per ton.

CENTURY BULLION.

Superintendent W. H. Lynch Brings Down a \$10,000 Bar of Gold.

Superintendent D. H. Lynch of the Century mine came down from Park Valley district in Box Elder county on Saturday evening and reported to Manager Thomas W. Jennings. As evidence of this Mr. Lynch brought along a bar of gold bullion, valued at \$10,000. This was taken out in a week. At this rate the mine is now turning out gold worth from its 3 stamp mill. This is greatly in excess of the monthly expense and is expected that with the increase in the mill capacity next spring, Mr. Lynch will soon pay dividends. Mr. Lynch left for the Park to spend the holidays with his family, who will go to Park Valley with him after the first of the year.

HORSESHOE SHIPMENT.

The Mine is Now Turning Out About \$25,000 Per Month.

Another rich shipment of gold cyanides reached town today from the Horseshoe mine at Park Valley, which is principally owned by Messrs. A. W. McCune and James McFarlane, of this city. The shipment, which is valued at \$10,000, represents the output for the first twelve days of December. The weight is 185 pounds, which gives a valuation of a little over \$74 per pound for the cyanide product. This is the first shipment made by the mine, which was started up, and it is expected that similar shipments will be made regularly throughout the winter. About 100 men are employed at the mine, which is under the management of Mr. McFarlane. The mill is turning out about \$25,000 per month from about 2,800 tons of ore.

JUDGE ZANE TALKS.

Devoted the Entire Day to a Consideration of the Mammoth Side.

On Saturday the court at Nephi listened all day to Judge Z. Zane who appeared in behalf of the Mammoth in the Grand Central-Mammoth case. Judge Zane referred to the apex question and argued that the slightest preponderance of evidence in favor of the Mammoth company was all that was necessary to decide the case. The testimony of Victor M. Clever was referred to with that of other experts who gave it as their opinion that the apex was on lot 28. These witnesses had followed the vein, it was stated, and their testimony that they had seen the apex was weighty. The strike and dip of the vein was also considered and the judge stated that the direction of the ore bodies in the main, is the only way to decide the strike and dip. In the afternoon Judge Zane considered the character of veins.

EUREKA HILL HUMORS.

Present Situation of the Centennial Eureka and Eureka Hill Companies.

A topic of conversation among mining men is the report of the contemplated purchase by the Centennial-Eureka Mining company of the big Eureka Hill mill. From official sources it is impossible to obtain any information in confirmation of the report, which is probably occasioned by the recent visit of Eureka of Mr. E. Hyde, who is in Boston, the consulting engineer of the Centennial Eureka. Mr. Parker put in a couple of weeks at the diggings, and while there was a frequent visitor at the Eureka Hill works, and it is to be presumed he made rather a critical examination of the plant. It has long been an open secret among mining men that the ore of the Centennial Eureka taken as a whole are not high grade, and that the smelting charge on the class of ore is a big item. The ore, together with the freight on the ore to the place of reduction soon amounts to a sum more than enough to pay for a plant. For some time past the Centennial Eureka surveyors have been busy putting up stakes over on a large area of unoccupied ground lying between the Oregon Short Line and Rio Grande Western tracks, about a mile west of Eureka.

It is, therefore, fair to assume that the company will soon provide some sort of reduction works for its ore, but whether it will be a mill or a smaller one seems to be in doubt.

The Eureka Hill and Centennial Eureka mines are both on the same vein, and have the same class of ore, and it is maintained by mining men that the extraordinary successful results from the process used in the Eureka Hill mill, a combination of concentration and amalgamation, augurs in favor of such a mill for the Centennial Eureka. The Eureka Hill officials have made the statement that with all their

AN ADVANCE IN LOWER MAMMOTH.

The Stock Opened at \$1.22 and Sold Up to \$1.32 Per Share.

GRAND CENTRAL STRONGER.

May Day a Little Weaker—Star Con. Active—Sacramento Firm—Ingot Is Traded in.

A New York dispatch to the "News" today says that copper in paying quantities has been discovered in the Watchung Mountains, two miles north of Bound Brook, N. J. The fact that a copper vein had been found has just been made known. It has been developed that the mine has been discovered by New York men for several months.

The principal owner of the newly discovered mine is Josiah C. Reiff, of this city, six months ago he went to Bound Brook, and after acquiring a lease on a tract of land near the Potts place, where twenty years ago copper was found and where a mining company, dug into the side of the mountain, he began operations. Work at the mine was conducted in a most secret manner, even the fact that it was being panned there and who went to Bound Brook Saturday night, refusing to talk of the work and the results. They talked only however, last Saturday, of the rich find of copper and a man who is thoroughly familiar with the enterprise said that Col. Reiff had struck pay dirt. He said that there are about 6,000 tons of ore on the dump.

Concentrating works of fifty tons a day capacity have been built at the mine. The ore is of fine quality, and will run fully 40 per cent copper. In with the copper is mixed silver ore amount from six to ten ounces to the ton.

THE SMELTER SCHEME.

Mr. Terhune Says the Project Is Meeting With More Local Favor.

Mr. R. H. Terhune of the New State Smelter company, which is placing its stock in various places in the East and in Germany in order to secure the means necessary to build an independent smelter, reports today that moving along smoothly, though slowly. A greater interest locally is reported and there is said to be a number of inquiries regarding the standing of the promoters of the scheme. As this is entirely satisfactory, it is felt that they will be able to be successful in gaining their object. After which the promoters of the scheme, Mr. Terhune will be able to secure a credit of \$25,000, and with this \$25,000 he will build one furnace and begin operations, after which he thinks the hardest pull will be over.

Titie Shipments.

The Miner gives the following shipments from Titie district for the past week.

Cars of Ore.	
Mammoth	17
Carissa	8
Grand Central	6
ALX	1
Carissa	33
Godiva	33
May Day	3
Gemini	17
Hunter	6
Tesora	6
Swansea	6
Star Consolidated	4
Total	163

Mining Claims Conveyed.

Provo, Dec. 17.—A warranty deed from Jeremiah Schenck and Mary J. Schenck to Sylvester A. Work, all of Salt Lake, conveying the Gold Rule No. 1, the Emma and the Golden Rule No. 1, all mining claims all situated in the Camp Floyd mining district, has been filed for record with the county recorder. The consideration named is \$500.

MINING NOTES.

The Carissa of Titie was on the market today with 5 cars of ore.

A car of ore was marketed today from the West Argus of Stockton.

The Taylor-Brunton sampler reported 6 cars of ore from Titie, 1 from Stockton and 1 from Bingham today.

A. E. Hyde expects to go to Titie tomorrow to examine the Bullion-Buck. No change is reported in the mine.

The Ringham Copper & Gold company shifted a car of ore to the new smelter today from the Bingham mine.

Mr. Q. K. Fischer has gone to San Pedro, Mexico, after which he expects to new smelter being erected there under his direction.

A meeting of the directors of the Dexter was to be held this afternoon for the purpose of ratifying the payment of the indebtedness of the Dexter company.

Park City Record: A station is being cut at the 1,600 level of the Ontario. The shaft is now 100 feet from the tunnel level, and this is the point where the station is being cut.

At a meeting of the Yankee Consolidated directors on Saturday Dr. P. A. H. Franklin was made president of the company. Henceforth the management of the mine will be in the doctor's hands.

The Titie Miner says that Arthur Buckbee has accepted the position of manager of the Cumberland mine at Silver City, Idaho, owned by the Virgo Consolidated Mining company of Montreal, Canada.

Eureka Reporter: At the Grand Central about one-half the regular working force is at work. Somewhere in the neighborhood of forty men are employed, and this week six carloads of ore were shipped.

and other properties. The visitors were surprised at what they found, and said that the richness of the ore certainly warrants the prediction that South Pass is destined to be another Cripple Creek in a few years. In every mine where deep mining has been pursued the ore has increased in richness with depth. The New York men will advise their company to invest in property here."

A COMPLETE PLANT.

For Sampling and Smelting Is Soon to Be Built at Boise, Idaho.

The first complete sampling plant and smelter for the State of Idaho is soon to be installed at the machinery having been ordered and will soon be en route Boise, says the Boise Statesman. This plant will include a smelter of small capacity, a stamp mill of ten tons daily capacity, a small chlorination and cyanide plant.

E. H. Levy, the assayer and chemist, is the promoter of this enterprise. When he went to Salt Lake, about a month ago it was with the determination to put in such a plant here, but before it was done it was necessary, of course, to look into the methods of the different houses. He investigated carefully, and bought the best of the old-line smelters, one stack, water jacket, but with a movable lining, or rather three. This has the advantage the first of the week, and is expected to arrive any day now, says the Park City Record.

The machinery will be coming in right from the East. The carpenter work on the building is rapidly progressing. In fact, the finishing touches are being put on. At the depot the machinery work is still going on at the ore house. The train line car is furnished and ready to go into commission within a month, but it will be longer than that before the sampler is ready to start. The intention to start them both up at once.

ORE SHIPMENTS.

Following are the shipments of ore from the Mackintosh sampler for the past week:

Daily-West	1,192,000
Star King	867,000
Ben Butler	538,000
Ontario	203,000
Total number of pounds	2,800,000

Notes from Titie.

Mr. W. H. Cromer of Salt Lake spent Sunday in Mammoth inspecting the mine and the East Titie road, and Monday morning he left for the new ore bins of the Carrissa. Mr. Cromer is ready to start the mine and is very happy and well pleased with the work.

Mr. J. X. Ferguson of Salt Lake, manager of the Miners' Supply Co., has been in Salt Lake on business for a week. He returned to Robinson Sunday.

Mr. J. A. Cunningham Jr., former manager of the East Titie road, came to visit a day with his old friends Saturday. He returned to Salt Lake Sunday.

Messrs. W. W. Ohe, Shand Smith, W. H. Cromer and A. J. Underwood of Salt Lake, who are active in the Carrissa, were in Mammoth today.

Mr. H. E. Giles Jr. of Salt Lake, has leased H. H. Hesse's Hall, Mammoth, for the season. The hall is being cleaned and repaired and will be in fine shape for next year.

The Grand Central-Mammoth mining mill is being moved and rendered every day in the many saloons of the camp. Great interest is manifested in the testimony of the experts and the arguments of the lawyers.

The Mammoth mill will close on the 24th inst. for the Christmas holidays.

The Alex mine is working full force again. The mine was only closed four days on account of the burning of the engine house.

DRILL.

Peter Nolan was accused of vagrancy. When his name was called out Sunday a bolt for the door, but Diel cried "back up!" and he backed. He denied that he was begging, and the court gave him the benefit of the doubt, but told him to leave town.

Iver Walburn had a peculiar experience. It cost him \$5.10 for a shave and haircut. He was in the barber shop Saturday evening, and after getting "slicked up" laid down the sum of ten cents for payment. Mr. Sheets couldn't see it that way, and Iver came abusive. The doctor assessed him \$5, which was paid.

J. Callahan, J. W. Jones and Edward Johnson were arrested Sunday for being drunk, and each were fined \$5.

P. Roberts, a junk man, was assessed \$2 for failing to clean the sidewalk contrary to the ordinance in such cases made and provided.

The case against J. R. Walker, Jr., charged with violating the quarantine ordinance, was dismissed, as there was no evidence to show that Mr. Walker had been negligent.

A youth named George Edwards was accused of petit larceny. It is said that he approached L. Cunningham with a hard luck story, and the latter invited him to come home, where he could get something to eat. The boy remained overnight. When he got up yesterday morning he picked up a dollar which was on the dresser, and quietly left the house. Cunningham at once notified the police and Officer Sperry soon located Edwards, and took him to jail.

In court this afternoon Edwards pleaded guilty to the charge, and was remanded until tomorrow, when sentence will be passed on him.

BORN.

To the wife of J. A. McKendall, a ten pound boy at 1:50 a. m. Dec. 17, 1900. Mother and child doing well.

PAPWORTH—Of pneumonia, Dec. 16, at Crescent, three miles south of Sandy, Utah, Delmer, son of Olof T. and Grace Covey Papworth. Born June 2, 1899.

Funeral will be held at Crescent ward house Wednesday, noon, Dec. 19. Friends of the family invited.

DEPRIZ—Died at Olio, New Mexico, Dec. 3rd, 1900, Ebenezer Godfrey DePriz, son of E. G. DePriz and Sarah E. McCulloch, deceased. Aged 46 years. Buried at Fruitland, N. M., Dec. 6th, 1900.

DIED.

STOCK MARKET WILD.

Scene on the Exchange Floor One of Complex Organization.

BIG BLOCKS WERE THE RULE.

Wall Speculation Was Strong—Live Stock Lower—Produce Dealers Show Anxiety.

New York, Dec. 17.—The stock market showed all the signs of an exceeding and rampant bull speculation today. This has become so familiar in the last six weeks as to deprive it of much of its novelty and consequently of its interest as a mere spectacle. The galleries of the stock exchange were not overcrowded this morning, although the state of affairs on the floor was very well foreseen and had been abundantly advertised, but on the floor the attendance of board members was the largest in several years. The preliminary symptoms of the market on Friday and Saturday had been so unmistakable that every preparation had been made to meet a sweeping sale demand for stocks. The cables quotations from London for American stocks were confirmation of the general expectation. Stocks were amply filled, as was demonstrated within a few minutes after the opening. The groups of brokers were pretty well distributed among the different posts and all had their hands full when the chairman's gavel fell, marking the time to begin trading. In upwards of half a dozen stocks the opening quotations were with the difference of a cent or two, a large fraction on a number of cases. Round amounts changed hands of practically all the leading stocks dealt in, the individual transactions being in blocks of 4,000 and 5,000 shares. Blocks of 1,000 shares seemed to be the rule rather than the exception. Many brokers declared that they had been overworked with the volume of orders that they had to refuse business or discriminate in favor of large orders. The tape, however, recorded a fair sprinkling of transactions in lots of less than 100 shares.

The scene on the floor of the exchange was apparently one of wild disorder, but in reality it was a most complex organization. Skillful manipulations had its influence in the game of reckless abandonment and everybody knew just what he was doing in spite of the seeming excitement.

The stock market opened very animated and buoyant, and notable gains were scored all through the list. The international stocks were prominent in the earlier advance, and in London, The Pacifics, Southwesterns and coalers were conspicuous and showed prices ranging from 1 to 1 1/2. The local traction stocks were especially strong. The individual transactions were very large, the first blocks changing hands, running up as high as 4,000 to 5,000 shares in various cases.

Trading became irregular on heavy realizations in spots, and confident buying elsewhere. Extreme variations included declines of two points in Sugar and a point in Smelting and Wallace. The bull market marked up special stocks to sustain prices, but profit-taking continued on a very large scale. There was a very heavy sale of bonds and prices were generally higher.
