EVENING NEWS.

NARCOTICS. THE WORD OR WISDOM CONFIRMED BY MEDICAL WRITERS.

J. H. Kellog, M. D., writes as fellows:

Nicotine.—The active principle of tobacco, that is, that to which its narcotic and poisonous properties are due, is nacotine, a heavy, oily substance which may be separated from the dried leaf of the piant by distillation or infusion. The proportion of nicotine varies from two to eight per cent, Kentucky and Virginia tobacco usually containing six or seven per cent. A pound of tobacco contains, on an average, 380 grains of this deadly poison, or which one-tenth of a grain will kill a dog in three minutes. A case is on record in which a man was killed in thirty seconds by this poison.

A single cigar contains poison enough to extinguish two human lives if taken at once.

enough to extinguish two human lives if taken at once.

A number of instances are recorded in which instant death has been produced by applying a little of the olf from the stem or bowl of an old pipe to a sore upon the head or face of a small child.

The lation is the most most of the side of the sum and in the stem of the side of the sum and in the stem of the s small child.

Inhalation is the most speedy way of getting any volatile poison into the system. The reason of this is obvious when the fact is made known that the

lungs present a mucous surface four-teen hundred square feet in extent, every inch of which is in the highest degree capable of absorbing gaseous substances brought in contact with it. This membrane is of the most marvelously delicate character, being of such the very difficulty which it seems to exceeding thinness that it forms scarcely any obstacle to the passage of gases
which enter the lungs by respiration.
Just underneath this delicate membrane passes all the blood in the body,
or an amount equivalent to the whole
were wholly due to the effect upon
their delicate organizations of the volume of the blood, once every three poisonous fumes of tobacco which

volume of the blood, once every three minutes. The vapory poison inhaled by the tobacco-smoker is not simply taken into the mouth and then expelled, but it penetrates to the remotest air-cells, and spreads itself out over the whole of the immense extent of membrane stated. Thus it is plain that the blood of the smoker is literally bathed in the narcotic fumes drawn from his pipe or cigar.

When tobacco is applied to the mucous membrane, as in chewing and snuff-taking, its poisonous elements are absorbed in essentially the same manner as when it is applied to the skin, but much more rapidly. In chewing, considerable quantities are also absorbed through the stomach, being swallowed with the saliva.

Persons not accustomed to the use

ence of poisons of all kinds.

One reason why so few persons are reputed to die of nicotine or tobacco poisoning, is the wonderful faculty the system possesses of accommodating itself to circumstances. Through this means the worst poisons may by degrees be tolerated, until enormous doses can be taken without immediated to the facts of tobacco poisons may by degrees be tolerated, until enormous doses can be taken without immediated to producing disease. Every proper means ought to be adopted to prevent the contraction of the habit by the dining car, and that no liquors will be sold while the train is running through lowy. Please, Mr. Conductor, hold your train here two minutes till I run back to the buffet and get my bottle filled. Do the legismeans ought to be adopted to prevent the contraction of the habit by the galoots out this way think a Kentucky gentleman could ride clear across the State of lowy with an empty bottle?"—Chicago Herald. y latal effects. Corrosive sublimate

strychnia, belladonna and many othe poisons may be thus tolerated. In our opinion the majority of tobacco-users do die of tobacco poison-ing. Death as surely results, ulti-mately, from chronic as from acute poisoning, though the full effects are delayed, it may be, for years. A man delayed, it may be, for years. A man who dies five or ten years sooner than he should, in consequence of tobaccousing, is killed by the poison just as truly as though he died instantly from an overdose.

Dr. Richardson has asserted that the injury done to the blood corpuscies by nicotine can be readily detected in the blood of an old smoker by examination with the microscope. He then describes the changes which are found the middle of the street, which the middle of the street opposite the City Hall. Hercules is the name of a Maltese Tom owned by Mr. Robert Holmes, who keeps a fruit stand on Larimer street opposite the City Hall. blood of an old smoker by examination with the microscope. He then de-scribes the changes which are found to take place in the blood of a smoker:-

"The blood is made thiner than is natural, and, in extreme cases, paler. In such instances the deficient color of the blood is communicated to the body altogether, rendering the external surface yellowish white, and purfy."

But the most important change is exerted on those little bodies which float in myriads in the blood, and are known as the red globules. These globules have, naturally, a double concave surface, and at their edges a perfectly smooth outline. The absorption of the fumes of tobacco leads to rapid changes in them. Microscopically examined, they are found to high and low, but he coulden't be scopically examined, they are found to have lost their round shape, to have become oval and irregular at their edges, and, instead of having a mutual attraction for each other—a good sign, within certain limits, of their physical Mr. Holmes also grieved for his Tom.

health—they lie loosely scattered. Indeed, they indicate to the learned observer, as clearly as though they spoke to him, that the man from whom they were taken was physically depressed, and deficient both in muscular and mental powers."

The fact is established beyond the possibility of successful controversy. from all appearances left him "as soft The fact is established beyond the possibility of successful controversy, that tobacco is a poison, deadly in large doses, pernicious and harmful in shuts the rose."

large doses, pernicious and harmful in small doses. It taints the breath, ruins the digestion, obliterates taste and smell, spoils the blood, oppresses the brain, depresses the heart, irritates the nerves, wastes the muscles, obstructs the liver, dims the vision, stains the skins, and deteriorates and contaminates every organ and tissue with which it comes in contact in the body. Its influence is to lessen vitality, to benumbs the sensibilities, to shorten life, to kill.

Anything which affects the blood must affect every organ and tissue of the body. When taken in any form, tobacco very readily finds its way into

Anything which affects the blood must affect every organ and tissue of the body. When taken in any form, tobacco very readily finds its way into the blood, and, according to Dr. B. W. Richardson, an eminent London physician and scientist, it produces in the vital fluid very serious changes. He describes these changes in the following graphic words:

"On the blood the prolonged inhalation of tobacco produces changes which are very marked in character. The fluid is thinner than is natural, and in extreme cases paler. In some instances the deficient color of the blood is communicated to the body altogether, rendering the external surface yellowish white and puffy. The blood, gether, rendering the external surface yellowish white and puffy. The blood being thin, also exudes too freely, and a cut surface bleeds for a long time, and may continue to bleed inconveniently, even in opposition to remedies. But the most important influence is exerted over those little bodies which float in myriads in the blood and are known as the red corpuscles. These bodies have naturally a double concave surface, and at their edges a perfectly THE WILCOX IRON HARROW,

Tobacco and Consumption. - The re-lation of impure air to disease of the ungs is everywhere recognized. It has been very clearly demonstrated that breathing impure air is the great cause of consumption, on account of the effects of poisonous elements upon the blood and upon the lungs. Even the impurities gathered from the blood itself exist in air which has been once breathed in such quantities as to reconstruct the second of t breathed in such quantities as to render it unsafe to breathe again. This being the case, it will be readily seen that filling the lungs with the nicotin-ized smoke and hot fumes of tobacco from a pipe or cigar for several hours a day cannot but be a most certain cause of lung disease. Moreover, excause of ling disease. Moreover, experience shows this to be the case. Dr. C. R. Drysdale, the chief physician to the Metropolitan Free Hospital of London, declared in an article in Public Health, that "smoking in youth is no uncommon cause of pulmonary consumption."

Dated May 4th, 1886.

James Burrey, all of Toocle City,

George A. Romangton, Carl J. Kider,

no salmon canned to any extent this year unless the terms of the fishermen are compiled with. The strike this year is in favorable contrast with those of former years. There have been no riotous demonstrations and no disorderly and noisy proces.

At Stockton, Cal., May 9th, five boys were in a boat on the channel, when one of them—Lewis Fox, aged 15 years—was fatally shot in the left breast just running thence West Two (2) rods, thence above the heart by an unknown man North Three (3) rods, thence East Eight Three (5) rods, thence are the statements. who was practicing with a rifle. The bullet lodged in the back near the left shoulder, and death from internal hemorrhage resulted. He sat is the bow of the boat, and the ball which struck him passed between his four comof the boat, and the ball which struck him passed between his four companions. The police learned that two strangers bought a rifle that morning and were practicing with it in the afternoon, but their identity has not been established.

E. A. IRRIAND, Marshall been established.

A Rock Island train had just left Moline, Ill., and was slowly crossing the big iron bridge over the wide waters of the Mississippi when a tall passenger, with a huge mustache and watery eyes looking out from under a slouch hat, jumped excitedly to his feet and shouted:

shouted:

"Conductor! hyah, conductor! Are we in fowy yet?"

"No," responded that official; "but what if we ain't?"

"Then stop this train! Stop her quick! Stop her!"

"But I don't see any reason why the train should be stopped."

"Stop her, I tell ye! By so doing you can save the life of one of your passengers. I her of your to stop the train." gers. I beg of you to stop the train."

The conductor, wondering at this strange request, hesitated a moment and then reached for the bell cord. In a few seconds the train came to a standstill, when the excited passenger

absorbed through the stomach, being swallowed with the saliva.

Persons not accustomed to the use of tobacco often show symptoms of poisoning from taking a very small quantity of the drug, as by inhaling the fames of tobacco in a smoking-car or bar-room. Infants are often sickened by inhaling the air of a sitting-room which is poisoned by a smoking father. There are good reasons for believing that not a few infant deaths have occurred from this cause, as it is well known that, young children are exceedingly susceptible to the influence of poisons of all kinds.

One reason why so few persons are

WILD DAHLIAS IN MEXICO.-Th forests are full of wild dahlias, growing about three feet high and producing only single blossoms of pale yellow. They are perennial in Mexico, and from They are perennial in Mexico, and from this country were first carried across the sea. The double flowers, with their 100 tiats and varieties have been produced by cultivation, and many a wealthy Mexican who imports his garden dablias from Europe at great expense has not the remotest idea that the plant is indigenous to his own soil. Dahlia roots are a staple article of food among the Indians, who eat them boiled and salted. Though somewhat insipid to the taste, they are decidedly preferable to wild potatoes; and perhaps the day is coming when these bulbs, made succulent by horticulture, will furnish our tables with a new delicacy. Quien sabe? cacy. Quien sabe?

DO YOU WANT A PRETTY MOUTH? Harrisville girls read in the Alcona county Review that girls desiring to have small mouths should frequently repeat rapidly, "Fanny Finch fried five flounder fish for Frances Fowler's father."

They have formed societies and are They have formed societies and are now repeating the quetation in concert. They hope to get their mouths small enough to be kissed.
