

MINING, BUSINESS AND STOCKS.

ON BOHANZA FLAT IN PARK CAMP.

Splendid Headway is Being Made
With Development Work at
The J. I. C. Mine.

SHAFT TO GO DOWN TO 800.

It is Now at the 512-Foot Point—Manager
Turner Declares to Soon Pros-
pect With Diamond Drills.

Splendid headway is being made with development work at the J. I. C. mine of Bohanza Flat, Park City. Manager G. D. B. Turner has returned from a trip to camps and reported this morning that the shaft had been finished to the depth of 512 feet.

Headway, Mr. Turner says, is being made at the rate of about four feet a day. It is the intention of the management to carry out the plan, previously decided upon to sink to the 800-foot level and from that point for some cross-cutting.

In addition to this Manager Turner has concluded to do some prospecting with diamond drills and he proposes to start in the bottom of the shaft after it is completed down to the 300 foot point.

Manager Turner says considerable trouble has been experienced with water, but not enough to cause hindrance to the progress of work.

While in the east recently, Mr. Turner succeeded in enlisting the support of a strong New York syndicate, which, combined with the Scottish interests, makes a most formidable combination.

The J. I. C. is amply equipped with powerful machinery and is in shape to carry on the vigorous campaign which has already been inaugurated.

TRANSACTIONS IN THE PIT.

On the Mining Exchange this Forenoon,
Only Five Stocks Were Sold.

The mining stock market was dead today. Less than a half dozen of the traders on the big blackboard participated in the sales of the forenoon. Some of the higher priced stocks were in demand, so altogether the transfers summed up to \$6,077.75, the equivalent of 220 shares.

Daily-West appeared in much better tone and sold up to \$40.85, closing at \$40.75. Ontario was offered at \$5.25 and 25 shares were purchased at that price. Daily-Judge remained about the same as yesterday.

The closing quotations and sales were posted as follows:

A NOTED MINING ENGINEER.

Eugene H. Teats, Interested in Utah,
to Visit Here After Long Trip.

Eugene H. Teats, a well known mining engineer of Colorado is registered at the Kenyon. Mr. Teats and his associates are largely engaged in mining in various parts of the world, and are developing one of the most prominent properties at Park City. They also have interests in the Dutch Gulch and in the state of Idaho.

After Mr. Teats' visit to Salt Lake last fall he went east and proceeded to Dutch Gulch where his associates have undertaken to develop an extensive placer proposition 50 miles up the Maryne river where they are employing 145 men, mostly blacks. They have built a railroad and are using steam shovels.

While considerable trouble was at first experienced with the native blacks, they are rapidly becoming educated and are proving satisfactory. Mr. Teats reports much progress being made down there by Colorado and western men generally, nearly all of whom he reports as doing well. Americans as a rule are much in demand.

Being asked if the recent hurry in Wall Street had had any material effect on mining enterprises he said it had not. Legitimate mining propositions, he said, in constant demand where property presented, no matter whether situated in South America or in any part of the United States. Mr. Teats will be in and about Salt Lake for 10 days or more at which he will sail again for the tropics.

IMMENSE VEIN IN GOMER SHAFT.

General Manager Farish Sends In
Interesting Report About the
Harrington & Hickory.

VEIN PENETRATED 30 FEET.

Recent Strike is Important and Assures
Majestic Management of No Short-
age of Lead Ores.

To the officials of the Majestic Copper Mining and Smelting company the developments being made in the Gomer shaft of the Harrington & Hickory mine are becoming intensely interesting. And well they may be for the strike of lead carbonate ore recently made there is proving to be one of the most important ever made in Beaver county.

The news conveyed to the local offices through the medium of a report from General Manager Farish is gratifying indeed. He states that the shaft is still penetrating the ore, which has assumed a more compact form, and now shows no quartz or other material. "On the upper side," said Mr. Farish, we have penetrated six feet, this part of the vein is first class and the ore will go direct to the smelter without assaying.

On the following day Mr. Farish wrote that the shaft had cut the vein to a depth of 30 feet and was still being continued through an elegant quality of sand carbonate.

Mr. Farish, at the Majestic office, explained this morning that the vein being flat the shaft will be continued until the lower side of it is reached, when preparations will be made for cross-cutting.

Those who have doubted the ability of the management to keep the furnaces at the new smelter supplied with ore may as well take to the woods for hidings, for the developments are not in the slightest worried and there is apparently no good reason why they should be.

Mr. Farish reports development work as being steadily in progress at the old Hickory mine and that arrangements are practically completed to begin stopping on the 200 and 300 levels of the O. K. mine from which ore will be extracted to supply the copper furnaces.

Arrives from Sioux City.

E. D. Waterman has arrived from Sioux City, Iowa, but will return to the state again tomorrow. Mr. Waterman is interested in the Sioux City and Rock Springs coal company, a corporation formed less than a year ago, to develop a coal property near Rock Springs, Wyoming.

Five men are on the payroll of the company doing development work, but the force is to be increased right away.

EN ROUTE TO NEVADA.

Kansas City Parties Will Inspect the
Sheba-Interested in Arizona.

Among the visitors in the city today are a party of four from Kansas City, one of whom is in the party of the Sheba mine in Humboldt county, Nev., of which William H. Child is manager. The gentlemen are going to the Sheba mine to inspect the property and to be accompanied on the journey by Ed Copley.

Messrs. Hosier and Pope are interested in the copper mines of Arizona, particularly in the Pacific Mining & Metals company operating at Globe. In the property owned by this company Messrs. Hosier states that there are at least 5,000,000 tons of ore blocked off which will net the company at least \$8 to the ton after treatment. The ore runs from 5 to 10 percent copper. Plans are now being made to erect a smelter capable of treating 1,000 tons per day.

The Monitor group at Bailey, Ida., recently passed into the possession of Messrs. Hosier and Pope and upon his return from the west, Mr. Copley will proceed to the Wood River section for the purpose of starting up development work.

CONCENTRATES.

Director of the Mint, George E. Roberts,
Will be Present to Read a Paper.

An Associated Press dispatch from Deadwood, S. D., under the date of yesterday states that preparations for the American Mining congress, which is to convene in that city and Lead this week, are progressing rapidly. The various bureaus are busily engaged in correspondence and the indications are that the session will be a record-breaker.

Director George E. Roberts of the mint will have an important paper on the program. Word to this effect has just been received.

Secy. Shaw has engaged his rooms. He comes as the personal representative and at the personal request of President Roosevelt. It is certain now that the question of a mining department in the cabinet will come up for exhaustive discussion, and it is believed that important action on this matter will be taken.

Among the governors of states who have already secured rooms is John T. Morrison of Idaho. He will head the delegations from Idaho.

Wire pulling has already begun in the session of 1904. El Paso, Tex., Omaha and Arizona and New Mexico are already in the field. The last two have combined forces in favor of Arizona.

A collection of precious minerals will be exhibited, which will include the individual collection of the Homestead mine, the greatest gold producer of the world; the collections of the Black Hills, Colorado, California and Idaho, besides smaller collections from other gold and silver producing states. Idaho is preparing what is believed to be the greatest and most complete single collection ever made.

DEPARTS FOR ARIZONA.

Col. H. L. Pickett, Formerly Identified
With the Savanah Copper Mine.

The many friends of Col. H. L. Pickett in this city will regret to learn that he has decided to take up his abode in Arizona. He closed his business affairs here several days ago and last night departed for the south. The colonel has had his move in contemplation for some time past. He has great faith in the future of the neighboring territory and believes that in a mining way, it will stand foremost among the states of the west.

While a resident of this city, Col. Pickett won fresh laurels as a mining lawyer, and was well liked by all who knew him.

BLUE JAY MINE IN DRY CANYON.

Adam G. Stolper Strikes a Good
Vein of Lead Carbonates While
Sinking a Winze.

FIFTEEN FEET BELOW TUNNEL.

Ore Encountered is of a Shipping Grade
—Vein Improves with Depth—
Utah-Queen Developments.

Adam G. Stolper, who drove his stakes in Dry Canyon, Tooele county, several years ago, is operating the Blue Jay group in that camp and with good success. Recently energies were directed toward the sinking of a winze near the mouth of the tunnel, which has resulted in striking of a good vein of lead carbonates at a depth of not more than 15 feet. As work has continued the vein has widened with no decrease in the values the ore contains. There is over a foot of shipping product.

The developments being made in Dry Canyon this year are of a character which indicate that the old camp will soon cut an important figure in the way of production. The Eureka-Ophir has already made an enviable record in that respect. The Utah Queen, under the management of Morris Hunt, has been doing handsomely and is ready to enter upon a shipping career as well as a creditable exhibit of ore from that state. Judge J. H. Richards of Boise is president of the congress.

James W. Neill, consulting engineer for the Tintie company, has resigned as a member of the program committee of the American Mining congress, which is to be held in Salt Lake City next month. Mr. Neill's time is so well taken up with other matters that it will be impossible for him to attend the congress. It is extremely doubtful if Utah will be represented at the congress at all.

Apparently the local mining fraternity is not interested in this year's session. Idaho will send a large delegation as well as a creditable exhibit of ore from that state. Judge J. H. Richards of Boise is president of the congress.

NEILL WILL NOT BE THERE.

Is Too Busy to Attend the Session of
American Mining Congress.

James W. Neill, consulting engineer for the Tintie company, has resigned as a member of the program committee of the American Mining congress, which is to be held in Salt Lake City next month. Mr. Neill's time is so well taken up with other matters that it will be impossible for him to attend the congress. It is extremely doubtful if Utah will be represented at the congress at all.

Apparently the local mining fraternity is not interested in this year's session. Idaho will send a large delegation as well as a creditable exhibit of ore from that state. Judge J. H. Richards of Boise is president of the congress.

CONCENTRATES.

Walter G. Flier has gone to Chicago, but will return the last of the week. C. E. Allen, general superintendent, is inspecting the Centennial-Eureka mine in Tintie today.

W. J. Lawrence and several eastern investors have gone to the Lawrence Con. mine in Idaho.

Manager McSherry, of the Mono mine of Dry Canyon, departed for camp again this morning.

J. W. Cairns, manager of the Eureka-Ophir in Dry Canyon, is in the city on a brief business errand.

Harry Joseph is directing a surveying party on the properties of the Columbus Consolidated at Alta.

President A. B. Lewis of the Imperial and other Beaver county enterprises, left for the east last night.

Secretary Joseph Henshaw, of the Royal Gold & Copper company, will return from Milford tomorrow morning.

Frank M. Wilson, the well known Deep Creek mining operator, expects to leave for the Clifton district tomorrow.

The directors of the Little Chief Mining company, of Tintie, met yesterday being made to erect a smelter capable of treating 1,000 tons per day.

The Monitor group at Bailey, Ida., recently passed into the possession of Messrs. Hosier and Pope and upon his return from the west, Mr. Copley will proceed to the Wood River section for the purpose of starting up development work.

Director George E. Roberts of the mint will have an important paper on the program. Word to this effect has just been received.

Secy. Shaw has engaged his rooms. He comes as the personal representative and at the personal request of President Roosevelt. It is certain now that the question of a mining department in the cabinet will come up for exhaustive discussion, and it is believed that important action on this matter will be taken.

Among the governors of states who have already secured rooms is John T. Morrison of Idaho. He will head the delegations from Idaho.

Wire pulling has already begun in the session of 1904. El Paso, Tex., Omaha and Arizona and New Mexico are already in the field. The last two have combined forces in favor of Arizona.

A collection of precious minerals will be exhibited, which will include the individual collection of the Homestead mine, the greatest gold producer of the world; the collections of the Black Hills, Colorado, California and Idaho, besides smaller collections from other gold and silver producing states. Idaho is preparing what is believed to be the greatest and most complete single collection ever made.

MARKET SHOWED GOOD STRENGTH.

Buying of Prominent Stocks Gave
Sympathetic Tone to the
Whole List.

ROCK ISLAND WAS THE LEADER.

There Was Some Reaction, But There
Was a Pronounced Rally on An-
nouncement from Sub-Treasury.

New York, Aug. 18.—There was large buying of a number of prominent stocks and their buoyancy gave a sympathetic tone to the whole list, which rose above last night. Rock Island was the leader, with an advance of nearly 2 points. Amalgamated Copper was also conspicuous, with a rise of 1 1/2. Gains of a point or more were scored by Union Pacific, Southern Pacific, Atchafalpa, United States Steel, preferred and Smelting preferred. Before 11 o'clock Amalgamated lost its gain and Erie, Atchafalpa, New York Central and other stocks, which had not shared in the upward movement, were a fraction lower at night. The market became quiet on the reaction. The announcement of authority for the sub-treasury to pay out \$1,000,000 for Australian gold deposited in San Francisco rallied the market. Rock Island was lifted 2 1/2 over last night. St. Paul and some other stocks recovered to the best. Sugar rose 1/4. The majority of the list advanced in Rock Island to 3 1/2 and a recovery to the best. Amalgamated, had a sustaining effect.

The market developed new points of strength which kept the whole list strong. Rock Island made a further advance and the coalers rose strongly. Reading gained nearly 1 point. Baltimore and Ohio, Southern Pacific, Amalgamated and Tennessee Coal made gains of 1/2 to 3/4. C. C. & St. L. rose 3/4. Consolidated Gas 3/4. General Electric 3/4 and Pullman 3/4.

Rock Island was pushed up nearly 4 points and Southern Railway 2 1/2, but these movements did not dislodge the heavy profit taking, which carried practically all the active stocks back 1 to 2 points. St. Paul leading the reaction. Virginia-Carolina Chemical preferred rose 1/4. National Enameling preferred 3/4 and Kansas City Southern preferred 3/4. International Pump lost 1/4. The closing was active and weak.

PRODUCE.
