120

one third of the moisture is still left in the cane after crushing, with a large share of the saccharine matter. Where this refuse is not burned, it usually lies around the sugar house as a nuisance. Sometimes it is carted to the leves, and used to strengthen it, in places where it is inclined to wash.

SUGAR MAKING.

to the boiler, into which it passes through a strainer. | caused by monarchs as well as by private individuals. Here it is heated to about 140° F., when it is clarified by the introduction of lime. This causes a precipitate of impurities and colors the juice. In many of the establish- lowing most important circular dispatch, adments it is still further purified by filtration. The next process is to evaporate the water, and make a thick syr- dressed to all the diplomatic agents of the up. This is done by the application of heat in a variety of methods. There are at least seven different forms of doing this in Louisiana. In the best establishments, it is boiled in vacuo, on the principle that liquids boil at a lower temperature, as the pressure of the atmosphere is re- made, by order of His Imperial Majesty, to the cerned, would be to forget our most essential oppression." moved. This process not only enconomises fuel, but avoids the danger of burning, and makes a much better article of sugar and molasses.

When the syrup is sufficiently thickened, which is however, does not crystalize, and to separate this liquid from the crystals, it is put in hogsheads, in the bottoms of which are holes, in which are inserted canes, that granulation goes on, and the syrup runs off into vats below. This liquid is the molasses of commerce. It is commonly sold by the planters in the vat, at so much a gallon, the purchaser furnishing his own casks, and removing it. What remains in the hogshead is the common New Orleans sugar, in which the shrunk cane is still found, when it comes to market.

Most of the sugar manufactured in this region, we were informed, is either consumed on the river, or goes down East. The process of refining sugar has been so greatly improved and cheapened, that the refined article is in much larger demand than formerly, especially in New York, and in the region immediately dependent upon it islands. Where brown sugars are used, nothing stands before the Louisiana article. It is very light colored, lively, and not bad to take, either on the cakes, or in the coffee. The average yield of sugar is something under a hogshead of one thousand pounds to the acre, and the melasses. When the soil is very rich, and the season is unusually favorable, two hogsheads and upwards are somethan cotton, when it does well. In favorable seasons, and under the best management, the profits are very large. But it has many draw backs. The plant is an exotic, and very liable to be injured by untimely fosts, both early and late. Nearly all the sugar lands are leveed, and subject to overflow, when these embankments give way. The planters live in constant apprehension of these calasweep away their crops and animals. The crop of the to disturb it. last season was unusually large, and had it not been for the Bell crevasse which swept over a territory forty miles square, in the heart of the sugar districts, it would have been the largest ever produced in the country.

THE DESERET NEWS.

"For God and fatherland!

"Given at my residence and metropolis of Vienna, on this 28th day of April, 1859.

FRANCIS JOSEPH.

* The original cannot be rendered literally, but its The juice of the cane is carried by spouts from the mill sense is, that the present revolutionary movement is
