

its limits or carried away in its immense sewers into the Thames.

The yellow fever, now ravaging the cities of the South, is believed to originate from impure matter festering in the rays of the summer sun, and sending forth invisible germs, which are the seeds of suffering and destruction. A thoroughly drained city, cleansed from decaying animal and vegetable matter, is not likely to be attacked with this awful disease, unless in such close proximity to its source as to receive the floating germs wafted upon the heated air. The fatal fevers that have spread destruction and woe have been, latterly, traced to imperfect drainage or polluted water. We firmly believe that the death rate of Salt Lake City has been greatly increased through the quantity of impure waste material thrown out of doors and left to rot upon the surface of the soil, and through deficient means of drainage.

This, then, is a subject that must also engage the attention of our City Fathers, and a system of drainage will have to be adopted, or the sanitary condition of this fair-appearing city will be truly deplorable. With its gradual slope towards a river of considerable volume, and its uniform division into streets and blocks, this city is admirably adapted for a thorough sewage system modeled upon the best known methods.

But defective sewerage is worse than none. The escape of sewage gas into houses has caused more typhoid fever in large cities, perhaps, than anything else. Unless means are adopted to cleanse the sewers that receive the drainage, they become obstructed and charged with an obnoxious gas that is fearful in its deadly force. What is done for this city should be done well, and as the time is drawing very near when a system of drainage will be an absolute necessity, the subject should be studied now, and the experience of the world in relation to it should be invoked, so that we may profit by the failures and triumphs of others, and be able to arrive at the best method of accomplishing what is desired.

Plenty of good water for domestic, agricultural and general use, and an efficient system of drainage, would remove many of the wastes and lighten many of the burdens of Salt Lake society.

Some California farmers say that lucern should never be cut until it is as ripe as barley. That it will grow to a height of eight feet, and that it is much better and fuller of nutriment if only cut twice a year, and will be preferred by stock to that cut when first in bloom. If both kinds are in a stack, animals will choose the old and coarse before that which was cut green. What Utah farmer will try it and send us an account of the result?

A correspondent of the *Pratt Farmer* says he has been cured of asthma, after the failure of all the doctors to relieve him, by the use of the following: "Two ounces iodide of potassium, dissolved in one quart of water. Take one tablespoonful three times a day. It takes hot water to dissolve it." When threatened with a return of the disease, one dose generally gives him perfect relief. It is worth clipping.

Parson Newman *alias* Leviticus xviii. 18, is anxious for a third term for Grant. He says: Should an emergency arise where the American people demand his services again, I know he would not refuse. He would regard it as a call of Providence." Newman wants another trip to the Garden of Eden at Government expense, but he won't get it. Grant has signified his determination to fight shy of all his former disreputable associates. If he gets in he will find some other bibulous person to compound his "hot scotch."

The following additional particulars, describing Tom Lawton, the uncaught murderer of Mr. Tullis and confederate of Troy Dye, is given by officers who are acquainted with him: "He bends the knees more than most men when walking; he has a habit when talking of biting or sucking one side of his lower lip. His eyes are a very dark blue and might be mistaken for dark hazel or even black. His hair is said to be a very dark brown, but not black. He is narrow between the eyes; there are no labor marks on his hands. He would wear about a six or six and a half boot."

It is not often that journalists are as outspoken and candid concerning themselves as the *Yuba Expositor* was, recently, on the publication of only a half sheet. The editor apologized thusly: "We trust the public will accept our apologies for the appearance of this number of the *Expositor*. The excitement of the election, accompanied by an over indulgence in mixed whisky, addled our brains and swamped our ideas so that we could not write." The truthful simplicity of this confession is very rare, and perhaps it was merely another case of the effects of a "quickened conscience."

Florida makes a million dollars a year by her lumber trade. All the stumpage funds that used to infest the Territories ought to flee to Florida.

Minnesota boasts of 395 flour mills, operating 1486 run of stone. They can grind out 56,000,000 bushels of wheat a year, an ample quantity to supply a pretty good sized family.

Fifty years ago the first locomotive engine on this continent was fired up and started. It was built in Stourbridge, England. Who can tell what wonderful changes in the mode of locomotion will be effected in 50 years hence?

In the month of June this year, at Paris, 184 more horses, mules and asses were slaughtered than in the corresponding month of '77. How many visitors to the Exposition have been deceived in their "bifteaks" will never be known by them this side of the grave.

A dispatch from Detroit to-day, announces the discovery of a new remedy for yellow fever. It comes from Chili. If it will only knock Yellow Jack so chilly that the heat of the tropics cannot warm him into life, it will be hailed as the great redeemer of the South.

A young lady of Sacramento, Cal., who tried to bleach her hair to "a beautiful blonde" by the use of arsenic, and who suffered agonies with the headache in consequence, is now a raving lunatic in the asylum at Stockton. It might be argued that she was partially insane in the start, or she would not have commenced the use of the arsenic.

German wool growers have demonstrated to their own satisfaction that by administering small quantities of chloride of potassium to their sheep, in the proportion of one part of the chloride to nine parts of salt, the production of wool is increased, while the general health of the animal is improved. What have Utah wool growers to say about this?

Impressed upon their minds the necessity and importance of prayer being attended to in the right season, both family and secret.

Elder Joseph Standing bore testimony to the truth of Elder Williams' remarks; said that we cannot walk in the path to eternal life without immediate and continued revelation from God, and the divine guidance of his spirit. He dwelt upon the necessity of continued obedience to gospel principles that the spirit of revelation might constantly attend us.

2 30 p.m.

Elder P. P. Pratt addressed the Saints upon their every day duties. Showed the necessity of the Church of Christ having the same organization and order that existed in the primitive Christian Church, for the work of the ministry and perfecting of the Saints. That the people of God have a warfare to wage against the evil one, which will continue until Satan is bound.

Elder Andrew S. Johnson spoke upon the unity of the Saints, and enlarged upon the personal responsibility of all mankind in religious questions. Insisted upon the Saints taking hold in earnest, and living up to the requirements of the gospel, then they could claim the promised blessings.

7 30 p.m.

Elder E. Stevenson delivered a powerful discourse on the fulfillment of prophecy and the gathering of the Saints in the last days; also of the return of the Jews to rebuild Jerusalem at an early day. Showed the plainness of the gospel of Christ, and portrayed the beauties and blessings of the same.

Second Day, 10 a.m.

Elder P. P. Pratt addressed the conference upon the building up of Zion in the last days. Instructed the Saints to make an effort to emigrate the coming Fall and be one with the Saints in Utah.

President J. Morgan reviewed the different dispensations when the priesthood of God had been upon the earth. Showed the greatness and magnitude of the principles of the Church of Jesus Christ of Latter-day Saints; and how the wicked and ungodly had tried to destroy the work of God, but to no purpose, although they had had power to drive the Church into the Rocky Mountains in fulfillment of the prophecies. Spoke of the judgments to follow the preaching of the gospel. Hoped we would all live so that we could enjoy the blessings and company of the sanctified ones in the kingdom of God.

2 30 p.m.

Elder David Williams showed the goodness of God in bringing forth the gospel in our day, when we as sinners can repent and be baptized, and obtain a remission of our sins and receive all the promised blessings resulting from obedience to its holy principles.

Elder J. J. Barbour instructed the Saints to be diligent in searching after the principles of the gospel of eternal life, all of which should be dear to us as Latter-day Saints.

Elder Joseph Standing spoke of the pre-existence of man, and our relationship to God and our fellow-man; we should bear in mind the covenants we have made, and live up to the requirements of the gospel, made at our hands by the Lord.

7 30 p.m.

President Morgan stated that he would proceed to organize a Relief Society for the benefit of the sisters in the Southern States mission. They could be a great help to the Elders in spreading the gospel, as they could do so by writing to their friends, distributing tracts and disseminating the principles of truth among their associates and friends. All were invited to join who wished to do good.

Sister Victoria Faucett was unanimously sustained as president, Sisters Sinia Lawrence and Emmeline Faucett, her counselors. Sister Joan Manning, secretary; all of whom were elected for six months.

Elder E. Stevenson took up the subject of the great gathering of the last days, and the return of the ten tribes from the north country, and the gathering of all the honest in heart in this dispensation, which is the one called "the dispensation of the fulness of times" by the prophets. The world may look for, and cry peace, but in vain, for instead of peace, war will be poured out upon all nations and people who

do not accept the gospel of Christ and gather to Zion for deliverance.

Third day, 10 a.m.

Elder E. Stevenson delivered a stirring address on the pre-existence of spirits, and our relationship to God. Showed how the world might come to a knowledge of the gospel, by obedience to its ordinances.

President J. Morgan presented the general authorities of the Church, who were unanimously sustained.

Elder J. Morgan was sustained as President of the Southern States Mission; Elder P. P. Pratt, Presiding Elder of the Tennessee conference; Elder R. Rogers Presiding elder of the Mississippi conference; Elder W. H. Barnett, Presiding Elder of the Virginia Conference; Elder David Williams Presiding Elder of the Georgia Conference; Andrew S. Johnson, Joseph Standing and Matthias F. Cowley were sustained as traveling Elders of the Southern States Mission.

Edward Stevenson was released to return to Utah.

Elder Thomas A. Laurence was presented and sustained as presiding Elder of Haywood Valley Branch, and Elders John J. Barbour, and Gabriel Barbour his counselors.

President Morgan then proceeded to remind the Saints of their several duties; that it is necessary for them to remember all of the officers and members of the church in their faith and prayers, and to be careful to live near to the Lord.

2 p.m.

Sacrament was administered. Pres. J. Morgan then addressed the conference on the divine evidence of the Book of Mormon, compared it and the evidences in its favor with those we had of the Bible. Showed that it was revealed to Joseph Smith by an angel. Explained the nature of its contents. How the Nephites enjoyed the blessings of the gospel, and then departed from them.

7 30 p.m.

President J. Morgan continued the subject which he was speaking upon in the afternoon. Read the testimonies of the witnesses of the Book of Mormon. Related some of the manifestations of the power of God in the history of the Church, especially in the Kirtland Temple, in the State of Ohio, where angels appeared to Joseph Smith and others.

Elder Andrew S. Johnson took, "Seek first the kingdom of God, etc.," for the foundation of his remarks, and showed lucidly the beauties of the kingdom of which Christ is the head. He advised the study of the Bible, Book of Mormon and Doctrine and Covenants, which were given for our instruction, edification and perfection.

President J. Morgan could not give the exact terms that the railroad companies would carry emigrants for this season to their place of gathering, but would find out soon, and advise those interested.

There were two priesthood meetings held during the Conference; J. B. Faucett was ordained an Elder and counselor to President Wm. C. Kilgore, of McLeomores Cove Branch.

Wm. R. H. Manning was ordained a teacher, to labor in the Beech Creek Branch.

D. W. Smith and James Keel were ordained teachers to labor in the Haywood Valley branch.

Two added to the Church by baptism during the conference.

Held a "pic-nic" dinner in the grove on Sunday, to which all were invited. The attendance of the Saints at the meetings was good, and all went to their homes feeling well repaid.

Elder A. W. Sabin arrived too late for conference, he being detained by sickness.

Report of the Southern States Mission:

Branch members, December 1876	216
Scattering members	60
Added in 1877 and to August, 1878	257
Total membership	533
Emigrated in 1877	281
Present membership	272
Branch members	192
Scattering members	80
Total	272
Traveling Elders	10

Minnesota boasts of 395 flour mills, operating 1486 run of stone. They can grind out 56,000,000 bushels of wheat a year, an ample quantity to supply a pretty good sized family.

Fifty years ago the first locomotive engine on this continent was fired up and started. It was built in Stourbridge, England. Who can tell what wonderful changes in the mode of locomotion will be effected in 50 years hence?

In the month of June this year, at Paris, 184 more horses, mules and asses were slaughtered than in the corresponding month of '77. How many visitors to the Exposition have been deceived in their "bifteaks" will never be known by them this side of the grave.

A dispatch from Detroit to-day, announces the discovery of a new remedy for yellow fever. It comes from Chili. If it will only knock Yellow Jack so chilly that the heat of the tropics cannot warm him into life, it will be hailed as the great redeemer of the South.

A young lady of Sacramento, Cal., who tried to bleach her hair to "a beautiful blonde" by the use of arsenic, and who suffered agonies with the headache in consequence, is now a raving lunatic in the asylum at Stockton. It might be argued that she was partially insane in the start, or she would not have commenced the use of the arsenic.

German wool growers have demonstrated to their own satisfaction that by administering small quantities of chloride of potassium to their sheep, in the proportion of one part of the chloride to nine parts of salt, the production of wool is increased, while the general health of the animal is improved. What have Utah wool growers to say about this?

Some California farmers say that lucern should never be cut until it is as ripe as barley. That it will grow to a height of eight feet, and that it is much better and fuller of nutriment if only cut twice a year, and will be preferred by stock to that cut when first in bloom. If both kinds are in a stack, animals will choose the old and coarse before that which was cut green. What Utah farmer will try it and send us an account of the result?

A correspondent of the *Pratt Farmer* says he has been cured of asthma, after the failure of all the doctors to relieve him, by the use of the following: "Two ounces iodide of potassium, dissolved in one quart of water. Take one tablespoonful three times a day. It takes hot water to dissolve it." When threatened with a return of the disease, one dose generally gives him perfect relief. It is worth clipping.

Parson Newman *alias* Leviticus xviii. 18, is anxious for a third term for Grant. He says: Should an emergency arise where the American people demand his services again, I know he would not refuse. He would regard it as a call of Providence." Newman wants another trip to the Garden of Eden at Government expense, but he won't get it. Grant has signified his determination to fight shy of all his former disreputable associates. If he gets in he will find some other bibulous person to compound his "hot scotch."

The following additional particulars, describing Tom Lawton, the uncaught murderer of Mr. Tullis and confederate of Troy Dye, is given by officers who are acquainted with him: "He bends the knees more than most men when walking; he has a habit when talking of biting or sucking one side of his lower lip. His eyes are a very dark blue and might be mistaken for dark hazel or even black. His hair is said to be a very dark brown, but not black. He is narrow between the eyes; there are no labor marks on his hands. He would wear about a six or six and a half boot."

It is not often that journalists are as outspoken and candid concerning themselves as the *Yuba Expositor* was, recently, on the publication of only a half sheet. The editor apologized thusly: "We trust the public will accept our apologies for the appearance of this number of the *Expositor*. The excitement of the election, accompanied by an over indulgence in mixed whisky, addled our brains and swamped our ideas so that we could not write." The truthful simplicity of this confession is very rare, and perhaps it was merely another case of the effects of a "quickened conscience."

Florida makes a million dollars a year by her lumber trade. All the stumpage funds that used to infest the Territories ought to flee to Florida.
