Badger Brothers **Brokers** 34 Main St. Phone 1934 MEMBERS MINING EXCHANGE UTAH AND NEVADA STOCKS BOUGHT AND SOLD Orders Executed on NEW YORK, BOSTON and SAN FRANCISCO boards

distance of five miles," said Mr. Poole "and engines will be running into Olinghouse within five weeks. Then you will see something doing in that district. The mine owners are now working their mines and taking out ore to be shipped as soon as the first ore train leaves the camp. Most of this ore will be milled at the large custom mill at Wadsworth, now in the course of construction, but a great deal of it will be shipped to other points and will be sold to sampling works in Reno and Salt Lake. "Olinghouse will lead them all some

day.

There is plenty of rich ore in the district, and all the mines need is development to make them dividend paying properties. Capital has now been interested in the camp and it will not be long before there will be a large town at Olinghouse. "The timbers for the new mill have

been all cut and the mill is being pre pared to receive the machinery. Thi This machinery has been shipped and will be hauled to the mill site as soon as a spur line is built from the mill to the Southern Pacific line. This spur is now being constructed and will be completed by the latter part of next

week "The mills of the Springfield-Nevaua company are now running on a test run of ore from the Texas-Nevada company. Two hundred tons of this ore is being milled and is going about company. \$40 per ton. All of the developed mines have ore on the dumps waiting for the road to be completed so that the ore can be shipped and milled."

COAL IN COLORADO.

Geological Survey Gives Out Figures Showing State's Production.

Celorado's coal production in 1905. says Mr. Edward W. Parker, statisti-cian of the United States geological survey, exceeded that of any previous year in the history of the state. It amounted to 8,826,429 short tons with a spot value of \$10,810,978.

Compared with that of 1904, the out-put of 1905 showed an increase of 2,165,218 short tons, or 32.5 per cent-nearly one-third, while compared with the production of 1903, the year of previous maximum production. 2700 record for 1905 shows a gain of 1,402,827 short tons, or 18.9 per cent. More than half of the increased pro-

,45 over 1904 was plainly duction of due to the growing iron lodustries in this state, for over a million tons of the increase, last year, was in the amount of coal made into coke. In Las Animas county, where the principal coke making production of coal in-creased from \$2,803,953 short tons to 4.297.599 tons, a gain of 1.488,646 tons, or over 50 per cent, the amount of coal made into coke alone showing an inrease of nearly 1,100,000 tons, or over

115 per cent. Another factor that assisted in the larger output for 1905 was the com-parative freedom from labor disturbances. The smaller production in 1964 was due in most part to strikes in some of the larger mines, nearly 4,000 men being on strike for an average of 125 days, or about one-half of the year. In 1905 there was no strikes in Colo-

rada The returns for 1905 show that 11.020 men were employed for an aver-age of 255_days, as compared with 8,123 men for 261 days in 1904, and 9,229 men for 245 days in 1902. The places of many of the strikers in 1904 were filled by other and less experienced men, and the statistics for the two years show that the dally production per man was 8.14 tons against 3.28 tons per man per lay in 1903.

One of the results of restricted production of 1904 was an enhancement values, the average price pe advancing from \$1 23 in 1903 to \$1.31 } 1904. With the larger production in 1905 prices receded, and the average for the state during the year was \$1.22

Five assays were made from the iedge an dthe returns were as follows: \$35.50, \$24, \$21.70, \$12.30 and \$4.40. 10-juch streak next to the hanging wall rurs in the hundreds and was not included in the assays. Work on this property will now be prosecuted in an aggressive manner and another tunnel will be started at once to crosscut the

gold.

other ledges that are exposed on the surface Cyrus Noble Extension The has reached the 100-foot level and will at once begin drifting and cross-cutting determine the extent and value of the vein. The showing so far is very favorable to the making of a big mine.

ROUND MOUNTAIN MILL.

Company Has Completed Plans to Erect Plant. Arrangements have been made to rect a mill at Round Mountain at once

by the Round Mountain Mining com-pany for the reduction of its ores and later it is intended to enlarge it sufficiently to receive custom ore, says the Sun of Goldfield. George H. Gruss, Jr., who with his father had long experience in Australia and in California in the dressing of

has been engaged to install and handle this first mill of the Round Mountain district, and will start from here for the scene of his labors in a few days, He says that the ore so far encoun-

tered in the Round Mountain company's property is wholly free milling and that the plates and a tube mill will probably be all that will be requied to save everything in the rock. The plant will consist of two Nissen stamps such as are used here in the American mill and the tailings from

the battery will then pass through the tube mill that the rusty gold which passed off the plates may be scoured eatch on another set of plates. he expects to secure all the value that

In case, however, the slimes give assays worth consideration, he will save them and devise a process for further robbing them of their gold, He states that the ore is well oxidized and that so far no sulphides have been

encountered. PARK CITY'S MINES.

Work to be Started on Scottish Chief -Last Week's Ore Shipments.

Marager A. J. Fern, of the Western Monitor property, says the Record, came up from the city on Sunday last and the following day went over to the diggings to make atrangements pre-paratory to commencing assessment work to the extent required by law. The ground belonging to this company a-mounting to 10 claims, is being patented, and the money raised for the season's development work, is being expended in this manner." After the ground is patented work will be commenced, and from the conditions already existing at the property, it is very likely that the proposition will in the near future be a paying one. The property is in-cated near the head of Iron can-

Manager Rood was up from the city this week looking after the beginning of work at the Mazeppa ground of the Daly company. It will be remem-bered that just prior to the disastrous cave-in in the Ontarior drain tunnel. connections were made between the shaft and the Federal tunnel. after same difficulty with water had been experienced and it was on account of tunnel trouble that work at the Mazeppa was discontinued. The management, however, is at present entisfied that the hig waterway will be opened again in a short time and it determined now to develop more fully the ore already uncovered in the south end of the Daly ground. Work was started again the first of the week, and after some necessary cleaning up has
