MANUFACTURES IN BIRMINGHAM

A week's work in Birmingham, England in the aggregate results in the fabrication of fourteen million pens, six thousand bedsteads, seven thousand guns, three hundred million cut nails, one hundred million buttons, one thousand saddles, five million copper or bronze coins, twenty thousand pairs of spectacles, six tons of papier-mache ware, 238,000 worth of jewelry, four thousand miles of iron and steel wire, ten tons of pins, five tons of hair pins, hooks and eyes, and eyelets, one hundred and thirty thousand gross of wood screws, five hundred tons of nuts, screw bolts, spikes, and rivets, fifty tons of wrought iron hinges, three hundred miles length of wire for yeast, forty tons of refined metal, forty tons of German silver, one thousand dozen of fenders, three thousand five hundred bellows, one thousand roasting-jacks, one hundred and fifty sewing machines, eight hundred tons of brass and copper ware, besides an almost endless multitude of miscellaneous articles, of which no statistics can be given, but which, like those enumerated, find employment for hundreds and thousands of busy hands, and are destined to supply the manifold wants of humanity from China to Peru.—American Artisan.

INGREDIENTS OF PRECIOUS STONES.—Very few persons who admire or deal in precious stones are acquainted with the intimate structure of these valuable minerals, and most persons will be astonished to learn that these bodies, apparently so solid and homogeneous, are often full of minute cavities, which in some cases contain fluids, and in others contain fluid cavities. Sir David Brewster met with one no less than a third of an inch long, but other authors have met with one more than one-tenth of an inch in diameter. These are usually half filled with a mobile and highly expansive liquid, which is considered to be carbonic acid. Sapphires are composed of pure alumina, colored by a metallic oxide. The ruby is also colored alumina. Cavities, we are told, are the cause of the color in sapphires, and moreover they appear to contain only water or a saline solution.

Occasionally a liquid with similar characteristics to that observed in sapphires is to be seen but not often; and we are thus led to suppose that the stone may be produced by different reactions and under different physical conditions. Emeralds are often full of cavities, which contain a liquid that does not expand when heated, and is apparently a strong aqueous saline solution. The diamond is, of course, the most interesting of all these precious stones, the origin and mode of formation of which has always been a great puzzle to chemists and mineralogists. Its structure has already been studied by Goppert, who discovered what he conceived to be organic remains, and hence infers that the diamond is the result of vegetable decomposition under peculiar conditions. Sir David Brewster first noticed fluid cavities in the diamond, and explained the optical peculiarities of some diamonds by their presence.

Cut diamonds sometimes inclose minute crystals of a different mineral, to which circumstance they also owe their peculiar optical properties. In the diamond, also, the inclosed liquid appears to be carbonic acid, as shown by its extraordinary expansibility. Only one other known liquid has anything like an equal rate of expansion, and that is nitrous oxide. The occurrence of this body in minerals is, it is said, highly improbable, and it seems, on the whole, that we may be justified in regarding liquid carbonic acid as a natural liquid mineral substance.

TRUSTEES' SALE.

WHEREAS M. P. BELL, by his deed of trust, dated July 29th, A. D. 1887, recorded in Mortgage Book B, page 79, of the County Records of Salt Lake County, conveyed to the undersigned the following described premises, to-wit:

TRUSTEES' SALE.

WHEREAS WILLIAM HARMON, by his deed of trust, dated May 5th A. D. 1892, recorded in Mortgage Book B, page 10, of the County Records of Salt Lake County, conveyed to the undersigned the following described piece of ground, to-wit:

Union Pacific Railroad IS BUILT! THE COMPANY PAID \$350,000 WORTH OF NEW GOODS

On hand and FOR SALE In quantities to suit purchasers.

Grain and Provisions CORN, FLOUR, TEAS, COFFEE, SUGARS, SPICES, AND ALL KINDS OF GROCERIES.

Carts, Plows, Scrapers, Shovels, Wheelbarrows, AND ALL KINDS OF TOOLS. TENTS, STOVES, STRIKING HAMMERS, STEEL, POWDER, AND ALL KINDS OF MATERIAL NECESSARY FOR RAILROAD BUILDING OR MINING.

And all material for Traveling or Mining Outfits. DERRICKS AND FIXTURES, ROPE, ALL SIZES, STEAM DRILLS, HORSE POWER DRILLS, BLOCKS AND SHIVES.

TENTS OF ALL KINDS, BLANKETS, SIBLEY STOVES, CAMP FURNITURE

TRUSTEES' SALE.
