

ACTION AGAINST  
UNION PACIFIC

Department of Justice Directed  
To Institute Legal Pro-  
ceedings.

## RETURN OF VALUABLE LAND.

This Step Follows Investigation Made  
By Special Agents—Instructions  
Given by Pres. Roosevelt.

The Washington correspondent for the Chicago Tribune is authority for the statement that President Roosevelt has directed the department of justice to institute legal proceedings against the Union Pacific railroad with a view to restoring to public domain hundreds of thousands of acres of valuable coal and agricultural lands alleged to have been acquired fraudulently by the railroad.

This step follows investigations made by the special agents of the interior department and the interstate commerce commission. Commissioner Prouty's report on the recent investigations is said to be highly sensational and to show a number of prominent people who have been guilty of fraudulent transactions in the alleged lands of the Union Pacific. It is estimated that as a result of the investigation will institute suit for the recovery of 10,000 acres of undeveloped coal lands, worth \$3,000,000 annually to the Union Pacific on Mr. Prouty's estimate.

The report also shows that the Union Pacific maintains a monopoly on the coal business in the states it traverses. This will be sent to the president of the Union Pacific. In the report Mr. Prouty says he found the Union Pacific had used men to enter claims for lands which it mining experts pronounced to be valuable, and later acquired the lands by the purchase of the claims. Byrus Beard, a judge of the supreme court of Wyoming, testified he saw men provided by the railroad enter claims to enter land, subsequently relinquishing it to the company for \$200. Other men were not so fortunate, but the company was getting as low as \$10 and \$15 for use of their names.

## WHAT LAW PROVIDES.

The law provides that a company or association may not secure more than 10 per cent of the coal in the territory which it owns. The law also provides that the Union Pacific this wise provision was nullified to the grave injury of the people who depend upon these lands for their fuel supply.

Another method pursued by the company is to prevent independent operators from obtaining valuable claims. In the terms of the grant given to the company every alternate section for 20 miles on either side of its route belongs to it.

To quote one of Mr. Prouty's associates the country through which the Union Pacific runs may be compared to a checkerboard, the black squares of which are owned by the railroad and the white squares by the government, or persons who have acquired them from the government. There are no state or territorial roads through this region, and it is difficult for private individuals to obtain access to lands in which they are interested without consent of the company. The latter does not hesitate to use the law to prevent trespass on its land.

This situation has enabled the Union Pacific absolutely to control the coal situation in the territory which it traverses. It owns the Union Pacific, the company, capital at \$50,000,000, the Superior Coal company, the railroad and the two companies, it is alleged, co-operate to obtain and hold lands and to control their development. The principal production is obtained through working the Rock Springs coal mines in Wyoming, from which 1,200 tons of coal are taken daily. It is estimated that the plant did not cost more than \$500,000, and the expense of operation more than was met by the sale of screenings.

## BIG PROFITS MADE.

The company, it is believed, makes a profit of at least a dollar a ton on this coal, whereas in West Virginia operations they are making well, it they make ten cents a ton. The company has driven independent coal operators away, and thus is in a position to fix the coal price, and in many cases, the coal price of the kind of coal obtained from its mines.

There is reason to believe the brigand methods charged against the Union Pacific have been the subject of recent conferences at the White House between President Roosevelt and Secretary Hitchcock. It was suggested that the withdrawal of the coal lands from the public domain and their fraudulent practices. This result has followed, but the president is not satisfied.

What he wants is to have annulled the patents to mineral, including coal lands, alleged to have been fraudulently obtained by the Union Pacific, and this brings up the question whether other and grant railroads have not secured fraudulent patents. It is understood the subject is being investigated by agents of the department of the interior, and it is expected other roads than the Union Pacific will be prosecuted in similar frauds are shown to have occurred.

President Roosevelt issued last summer an order withdrawing from entry lands in a number of western states. It has been found that some of the lands were agricultural, and to prevent their being withheld from the people, Secretary Hitchcock issued an order directing the commissioner of the general land office to segregate coal lands in North Dakota, Wyoming, which includes the Rock Springs section, Utah, Colorado, Montana, Washington and New Mexico.

## TO RESTORE LANDS.

It is estimated in the states named there are about 100,000 square miles of coal lands. Montana being credited with 22,000, North Dakota with 28,800, Wyoming with 15,500, Colorado with 10,000, Utah with 2,000, and New Mexico with 1,000. The director of the geological survey has sent eight parties of geologists into western coal regions, with instructions to report upon the extent, character, value, and ascertain the location of the coal fields affected by the order of withdrawal.

The investigations of these parties will enable the government to restore to the people the lands which have been fraudulently taken from them. The parties will also report upon any lands which have been taken up by individuals as agricultural, but which are being worked for the coal they contain. The geological survey estimates that about two-thirds of the whole area of coal land in the great west has been fraudulently taken from the government, much of it fraudulently. If possible fraudulent entries will be cancelled and the land restored to the government.

President Roosevelt is taking a deep interest in this subject, because he wants to put the people in a position to work their own coal mines in the west of such another strike as that occurred in 1902. As soon as the government has completed the location of coal lands withdrawn from entry they will be leased to individuals at a price which will insure the government a reasonable percentage of the value of their product. This lease will thus far reached, but will not be a provision which will enable the government to step in and operate the mines if it seems advisable to do so.

NOBLE WOMAN HAS  
BEEN CALLED HOME

Death of Mrs. Kimball Brings  
Sorrow to Many  
Hearts.

## A FAITHFUL CHURCH WORKER.

Cheerfully Went Among Strangers for  
Sake of Her Religion—Was a Sin-  
cere Friend to the Poor.

A death that will bring sorrow to many hearts and be universally regretted throughout Utah and surrounding states and territories, is that of Mrs. Olive Woolley Kimball, wife of Joseph Andrew Kimball of the St. Joseph Stake, who passed from mortality last evening. Born and reared in Salt Lake City, where she numbered friends and acquaintances by the hundreds, Mrs. Kimball cheerfully accompanied her husband when a call of duty came and with him left friends and scenes of early life, to make a home in a sparsely settled region, almost entirely among strangers. But there as here, the lovable disposition and noble traits of character possessed by Mrs. Kimball made her new friends wherever she was known, and they will join with acquaintances of earlier days in mourning her departure.

The health of Mrs. Kimball had been impaired for some time and it was thought that a trip to Salt Lake would prove beneficial. With this hope in view and with a mission of representing the St. Joseph Stake Relief society, of which she was first counselor, in the conference held here on Oct. 4, Mrs. Kimball came to this city, accompanied by Charles M. Layton, counselor to President Kimball, arriving at the home of her sister, Mrs. James M. Wardrop, on the morning of Sept. 30. Although feeling very poorly, Mrs. Kimball attended the sessions of the conference, but soon afterwards was forced to take to her bed. From the house of her sister she was removed to the hospital and her husband was sent for. President Kimball arrived here Sunday morning, and was with his wife until the end came.

Mrs. Kimball is a daughter of the late Bishop Edwin D. and Mary Ann Woolley, and was born June 1, 1860. On Feb. 2, 1885, she became the wife of Andrew Kimball, and 11 children were born of the union, eight of whom are now living. They are Mrs. Clara Brinkerhoff, Helen, Delbert, Rudolph, Spencer, Alice, Helen and Rachel. The last named is months old, was brought to this city by her father, while the remainder of the children are at Thatcher, Ariz.

In the early part of the year 1898, Mr. Kimball was called to reside over the St. Joseph stake, and removed his family to Thatcher, Arizona. There Mrs. Kimball became prominently identified with all the organizations pertaining to her sex, and was a pillar of strength in every religious and social movement of the community. In addition to being counselor in the state presidency of the Relief society, she presided over the organization in her home ward and took a leading part in caring for the poor, in relieving the distress of the afflicted and in preparing the dead for burial. She was a cheerful and indefatigable worker and endeared herself to all with whom she came in contact. Her death will be a distinct loss to the stake, Thatcher ward and to the St. Joseph stake. In addition to her loving husband and immediate family, Mrs. Kimball is survived by many relatives in this state and adjacent parts. Her brothers and sisters are Orson A. Woolley, of Alberta, Canada; George E. Woolley, of the Salt Lake land office; Mrs. Ruth Hatch, Mrs. James M. Wardrop and Julia Woolley.

Arrangements have been made to hold funeral services over the remains of Mrs. Kimball on Sunday, at the thirteen ward meetinghouse, commencing at 2 p. m. The body will then be taken to the depot and shipped to her late home in Thatcher, Arizona, for burial. After Saturday morning the remains will be at the residence of Mrs. Wardrop, 444 east Second South street.

**PILES CURED IN 6 TO 14 DAYS.**  
PAZO OINTMENT is guaranteed to cure any case of itching, blind, bleeding or protruding piles in 6 to 14 days or money refunded.

Why pay \$35.00 to \$50.00 for suits and overcoats, when Daniels the Tailor makes them for \$20.00, \$25.00 and \$30.00?

The 25 to 50 per cent Discount on House Furnishings will be given until further notice at the I. X. L.

## SUNDAY EXCURSION

To Ogden Canyon Oct. 21.

Via D. & R. G. R. R. Leave Salt Lake 10:25 a. m. and 1:45 p. m. Returning leave Ogden 7:00 p. m. Fare to Ogden and return \$1.00. Trout and chicken dinners at the Hermitage.

## FLOCKMASTERS COMING.

Major F. E. Wolcott Here in Advance  
Of Big Woolmen's Convention.

Major F. E. Wolcott, general agent of the Omaha stockyards, arrived in Salt Lake yesterday afternoon for the purpose of looking into the arrangements that are being made for the coming convention of the National Wool Growers' association. After going over the situation, Mr. Wolcott expressed himself in a very enthusiastic strain to the effect that there was unusual prosperity in the sheep business and consequently a largely attended and successful meeting of flockmasters was assured.

In speaking of the proposed exhibit of fat sheep Mr. Wolcott said: "The eastern markets are interested in getting the best possible prices for their source. There will, however, be other classes of wool sheep that the buyers from the east will be interested in and they may be expected to support this portion of the exhibit. These conventions are valuable in many ways. First of all they are an excellent means of education as they

bring sheep men in touch with the best methods of breeding, give them an opportunity to secure the most profitable kinds of stock, and enable them to secure information from the proper care of their flocks. Of course, anything that benefits the sheep men generally also benefits us and we are naturally much pleased with the situation."

Our patterns fit the hard-to-fit. Easy, quick, perfect system—Keister's, 323 west First North.

## THE IDAHOAN

Is a copy of a French model hat at BANKS' 116 SOUTH MAIN STREET. It's a silk beaver, champagne color, trimmed with green velvet ribbon, three-toned brown roses and China pheasant breast at the side. The fur set, also to be had at Banks', goes nicely with the hat.

bring sheep men in touch with the best methods of breeding, give them an opportunity to secure the most profitable kinds of stock, and enable them to secure information from the proper care of their flocks. Of course, anything that benefits the sheep men generally also benefits us and we are naturally much pleased with the situation."

## EARTHWORM'S SALIENT WORK

Not Only Improving Texture of Soil,  
But Making Available Plant Food.

That the work done by the earthworm is very important has come to be recognized by all close observers of nature. Darwin was perhaps the first to publish accurate investigations concerning the work of this humble animal. Since Darwin's time a great deal of attention has been paid to the earthworm, and it has become of greater and greater interest to the farmer. During this time the discovery has been made that nitrogen is being supplied to the earth in various ways and that the work of the earthworm is in danger of exhausting its supplies. This element has been learned that potash exists in very great quantities in the lower layers of the soil. The question of phosphorus, however, is one that has remained unsolved from generalization to generation. The quantity seems to be limited, and much of that known to be in the soil is locked up in a form in which plants are unable to use it.

Investigators have been puzzling their heads to find out the manner by which much of the phosphorus becomes changed in form, so that the plant may take it into its circulation and employ it in the building up of its tissues. The question has been at least partly resolved by the discovery that the earthworm is an important part in keeping up the supply of available phosphorus. S. N. Russell, a Russian scientist, has carried on a series of experiments and has obtained most important results. In one set of tests alternate layers of different kinds of soil were placed in glass boxes, and in each glass, for purposes of observation, in these layers earthworms were placed, the soil being kept in suitable condition of moisture, so that the worms worked as naturally as they would in the open ground. The experiments lasted a year, at the beginning and end of which time analyses were made to determine the results. A check test was made by providing other boxes of soil identical in every respect, except that no earthworms were placed in these.

In the soils worked over by the worms the soluble phosphoric acid was found in all cases to be greater than in those not worked by the worms. The work of the earthworm in this respect is of great importance. It seems to show conclusively that the earthworm is keeping the earth through its body—this worm feeds upon earthworms some kind of an acid which renders the phosphorus of the soil thus affected soluble. Important as is the work of the earthworm in other ways, this is probably the greatest work done by it. It does a valuable work in carrying the humus from the surface of the soil into the depths below; also in carrying down lime.

In the experiments referred to it was found that the lime which was at the beginning in the surface layers of the soil was, in the end, more in the subsoil, and that the increase of lime was gradual from the surface down. It was also discovered that the nitrogen content of the soil was more evenly distributed through the soil at the end of the experiment than at the beginning. This, of course, is due to the fact that the humus of the upper soil is carried downward by the earthworm.

Thus, without the work of the earthworm, all the humus that has accumulated through the centuries by the decay of plant and animal life on the surface of the ground would never have been so well mixed with the soil. When one takes into account the long ages in which the earthworms have been at work an idea is obtained of the great part they have had in the preparation of the earth for the use of man. Here is an example of the apparently insignificant agencies which have had so much to do in making the world habitable—Buenos Ayres Herald.

## GARDNER DAILY STORE NEWS

Attention to Detail

One of the important things that go to make Gardner Suits and Overcoats the best and smartest of all.

Nothing is considered too trifling to deserve care in the making of our Clothing.

The one idea is to preserve the reputation so honestly won by us in selling goods of highest quality at a corresponding fair price.

Popular Suit prices \$12-\$15, \$18, \$20 and \$22.50. Overcoats \$6 to \$50.

UTAH AND DENVER  
MEET TOMORROW

Maddock's Men Have Studied  
Hard in Colorado All  
Week.

## SHOULD BE EASY WINNERS.

Opponents Are in Secret Practice and  
Are Determined to Put up a  
Hard Game.

The University of Utah football team goes into its second game tomorrow. The opponents are from the Denver university, an institution that ranks very low among Colorado universities, and ought not to have a team able to play much football, unless the alleged Colorado practice has been employed of buying up material with "assistants" for the mere purpose of playing football, and diverting interest in the game when played as a recreation, to the university.

From letters received here from members of the team, it appears that the men are in good form, that they were not in the first game, and that the effect of a big lesson in the necessity for earnest work from now on.

Several amusing facts were given during the week, from which the team departed at 6 o'clock sharp, on orders from Coach Maddock. The daily program is a process of making camp, made football men is not being looked after very carefully this week, while the local enthusiasts will have to wait till well along in the end of the season before they see a game. The effect is sure to be a loss of patronage from the effect of not having any early season "appetizers" to prepare for the big struggle.

With the team is a number of men who are new here this year, and had not tried out in the scrub eleven. Remaining at home are several who have worked through two seasons in the hope of making the team, and were legitimate students. Down in the lower division is a football team, uniform for some kind of a game like they read about in the fairy tales. The man who is now the university, as he disappeared after siding up the school.

The first local game is now scheduled with the Montana university at Salt Lake on Nov. 3. It is followed by the Boulder game on Nov. 17, and a game with the Legion Aggies on Thanksgiving day.

## GAME TOMORROW.

All Hallows and Ogden Will Open Season on Local Field.

At Cummings field tomorrow afternoon Ogden and Salt Lake will engage in football, the contesting teams being All Hallows and the Ogden High School. The game is expected to be much less in character this year than it has been with its football, and All Hallows is out with a shout of the largest possible dimensions. Ogden High School put up a stiff game against the scrub eleven from the University last week, and the varsity boys won mostly from blocking pure bluffing. Tomorrow is mostly a matter of conjecture and both teams have plenty of backing.

## FINE WEATHER

And Fast Hares Make Joy for All at Hot Springs.

Hot Springs, S. D., Oct. 18.—The William Burke challenge cup was the trophy contested for at the national coursing meet today. Patched Up, owned by D. K. Carter of Cottonwood Falls, Kan., won the cup. The weather was fine and the hares were fast.

First Round—Happy Free beat College Queen, Wild Gus beat Affection, Mr. War beat Contender, Gus beat Fine El, Patched Up beat Lady Roberts, LaGarcia and Munster Muldoon tied. Second Round—LaGarcia won. Mawer Fair beat Mr. Roy, Mr. Patton beat Fine Envy. Second Round—Happy Free beat Wild Gus, Bartagus beat Mr. War, Patched Up beat LaGarcia, Mr. Patton beat Master Fair.

## SUTTON IS CHAMPION.

New York, Oct. 18.—George Sutton of Chicago is now the acknowledged world's champion 28.2 ball line billiardist.

In a match game for the title he defeated George Slosson of this city at Madison Square Garden last night.

ison Square Garden concert hall tonight by the score of 500 to 375.

In the tournament held here last April Sutton made the world's record run of 214 and an average of 100. Sutton tonight showed some of the most brilliant billiards ever seen in this city. His best run was 302 in the fifth inning.

## YALE'S CHANCES GOOD.

Garden City, L. I., Oct. 18.—At the close of today's play in the intercollegiate golf tournament Yale seems to have a royal chance of repeating its double victory of last year on the links of the Garden City club. Yale won the team championship yesterday.

## PACIFIC COAST.

Oakland, Oct. 18.—Vickers' delivery shut out Oakland today and won the game for Seattle by a score of 3 to 0. Vickers struck out 12 men.

## R. H. E.

Seattle ..... 5 3 0  
Oakland ..... 0 3 4  
Batteries—Vickers and Blankenship; Rively and Hackitt.  
Umpire—Derrick.

## The Finest Private Tomb.

"The finest private tomb in the world," said an undertaker, "cost \$900,000. It is in England—the tomb of the Duke of Hamilton, in the park of Hamilton Palace.

"This tomb is a model of the castle of San Angelo in Rome—a tremendous, circular structure of the purest marble.

"The gates are a copy of the Ghiberti gates of Florence, and the coffin of the Duke is inclosed in an Egyptian sarcophagus of black marble.

"Our American millionaires, extravagant as they are in other ways, don't spend as much on their tombs as I should like to see."

What is a cold in the head? Nothing to worry about if you treat it with Ely's Cream Balm as soon as you begin to sneeze and sniffle. Neglected, the cold may grow into catarrh, and the air-passages be so inflamed that you have to fight for every breath. It is true that Ely's Cream Balm cures catarrh promptly and certainly. But now know the old cure about the ounce of prevention. Therefore use Cream Balm when the cold in the head shows itself. All druggists, 50c, or mailed by Ely Bros., 54 Warren Street, New York.

A miner recently imprisoned by a cavern was able to signal his rescuers by tapping on the airpipe which entered the workings. The sounds gave only vague information, and he affirmed that his confinement might have been shortened many hours if he had been transmitted details of his surroundings. This experience has led to the suggestion that a simple code of signals be prepared for emergency use. Some may learn the Morse alphabet, but this can hardly be expected of miners, while a few easily remembered combinations of taps may serve to give intelligible directions to rescue parties.
