

MINING, BUSINESS AND STOCKS

STOCKS HAD A LOWER TENDENCY.

The Traders Which Displayed Strength During the Past Few Days Lost Ground Today.

GRAND CENTRAL IN THE LIST.

Sacramento Continued Weak-Yankee Con. Lower-Forenoon Quotations and Sales.

Lower prices prevailed for stocks on the Mining Exchange this forenoon. Nearly all the traders which displayed vigor during the past few days were quoted down. Consolidated Mercur sold at 33 cents on the open board, but fell back towards the close with no one willing to bid more than 311/2 cents for the stock. Daly-West recorded a transfer at \$24.00 during the regular call, ending depressed,. Yankee Con. followed the others, selling down. While Grand Central continues to flood the markets with ore, the indifference displayed by the investor caused some holders to relax and it was offered at \$4.50, with no one in the mood to bld above \$4.41. Montana-Tonopah was in strong in the bldding. The closing quotations and sales were:

he crosscut north to the ore bodies has been begun. The new holst of 50 horse-power has been working for nearly a week and great progress is being made in raising to the surface the immense amount of ore and dirt which had ac-cumulated in the drifts and crosscuts which the old gasoline holst was unable to cope with. It is stated on good au-thority that Mr. Henry Kehoe, acting for the Gooderham and Blackstock syndicate of Canada was desirous of obtaining control of the property at a price largely in excess of the present market price of the stock, but overtures made to the company brought forth a response indicating that the present management were not desirous selling their interests and incidentally it may be stated that the ore re-serves blocked out in the mine are estimated at \$3,000,000.

LOG CABIN DEVELOPMENT.

Property Looks Good to Assistant Manager Murry Who Recently Visited It. Richfield advices state that Assistant Manager Murray of the Gold Development company has returned there from a trip of inspection to the Log Cabin mine near Marysvale with the declaration that this property looks better to him than ever before. Work is progressing steadily with the tunnel along the lines outlined some time

NEW EQUIPMENT ORDERED.

ago.

Seven New Slimers to be Sent to the Honerine Mill at Stockton.

Manager Willard F. Snyder of the Western Exploration has announced that the plan to add several concentrat- the young bonanza which, the manaing tables to the equipment of the Honerine mill will be carried out at umn of dividend paying mines before once. Seven slimers of the Wilfley pattern will be installed and the order has already been placed for them. Arrangements have been completed with the American Smelting & Refining company to handle the mill's output of concentrates. About 8,500 gallons of water per minute is flowing from the Honerine tunnel at the present moment, and the mines of the district are being rapidly unwatered.

Mining Near Calientes. (Special to the "News.")

Callentes, April 26 .- A forty-foot ledge of low-grade gold-sliver ore has been stripped for nearly one thousand feet on the Venus claim, one-fourth of a mile from Callentes. Hans Olson has purchased a onethird interest in the Japan gold mine at Calientes, and work will be begun on the tunnel this week.

CONCENTRATES.

James Long, Jr., is up from the Gold Mountain district again.

JACOBSON TALKS COLUMBUS CON. President of This Young Bonanza Tells the Michigan Shareholders What He Is Doing at Alta.

CONSTRUCTION OF NEW MILL

Will Commence as Soon as Possible -Figures on Cost of Production -Crude Ore Shipments.

President Tony Jacobsen of the Columbus Consolidated Mining company is in the copper country of Michigan mingling with the shareholders of the big Alta property located there, of which there is a goodly number.

A few days ago the Mining Gazette of Houghton contained an interview with Mr. Jacobsen, and, in a comprehensive way, he told just what is being done at ger declares, will be placed in the colthe close of the present year.

It was explained that the principal point of attack in the development of the Columbus Consolidated has been through the Columbus tunnel. This is driven north by east as a crosscut for 1,300 feet through country rock, to a point where it intersects the Braine fissure. Then it turns an acute angle and drifts west on the fissure until it intersects the contact against which the very high values are massed and what is known as the Bonanza stope has been opened. Drifting on this contact has been carried on with the most satisfactory results. The drift on the fissure also carried profitable milling ore practically throughout its entire length.

The contact which crosses the Braine fissure dips to the east. Therefore by sinking vertically from a point in the tunnel east of the contact, a winze would intersect the contact at depth. This course of development has been undertaken. The winze starts about 40 feet east of the contact and is now down 60 feet. It is calculated that the contact will be opened in about 50 feet more of sinking.

The value of the ore has shown a S. M. Levy is in Bingham today in-specting the Deems property in Carr solid ore. The assays from the bot-

Came Realizing. New York, April 28 .- The strength of the London stock market helped the opening here today and prices were fractionally higher except for the Eric stocks,

which were sharply depressed by the poor showing of net earnings for March. Amalgamated Copper, selling ex-dividend, rose nearly a point and Anaconda

jumped 3%. Union Pacific's gain of a 1/2 measured the largest advance of the morning. Realizing sales in Amalgamated and

Union Pacific defeated attempts to ad-

WESTERN MARKET LETTER Special Correspondence.

Kansas City, Mo., April 25 .- The supply of range bred cattle was light From Ogden, Cache Valley, and intermediate points last week, and was made up mostly of From Ogden, Chicago, St. Louis, Kansas City, Omalia, Denver and San Francisco Panhandle stuff. Kansas fed, high grade Panhandle steers sold at the latter part of the week as high as \$4.70; From Ogden, Cache Valley, St. Anthony, Portland, and San Francisco they were heavy and well finished. Fed, Colorado steers, 1,350 pounds, sold Thursday at \$4.75. On Monday, which was the low day of the week, 975 pound and 1,100 pound Panhandie steers brought \$4.00 to \$4.25, and on Wednes-day, 975 pound Panhandle steers brought \$4.30. Seventy-five pound Colo-rado heifers brought \$4.20 during the rado heifers brought \$4.29 during the week, and western stockers and feed-ers sold at \$4.00 to \$4.15. Steers closed the week fully steady with the close of previous week, and fed she stuff gained 5 to 10 cents. Stockers and feeders did not change during the week. The total

not change during the week. The total supply of cattle for the week was 31,-300, which was liberal, and consisted of 50 per cent beef steers, 30 per cent she stuff and butcher cattle, and 20 per cent stockers and feeders. The excel-lent demand for killing stock, which D. E. HURLET, G. P. & T. A. D. S. SPENCER, A. G. P. & T. A. City Ticket Office, 201 Main Street, Telephone 350. has been enjoyed ever since the close of lent, easily took car of all the killing cattle at an average gain of 5 to 15 DENVER PRID GRAND

cents over previous week, and at prices the most satisfactory of this year to date. On account of storms in the west yesterday, supply today is light at 4,000 head, and market is snappy and active at strong prices, with cases 10 cents higher.

Sheep and lamb prices are 30 cents higher than a week ago. Supply con-tinues light; about one-half of the run of a year ago at this time, presumably on account of the lateness of southern sheep in moving. Prices are strong to 10 cents higher today than Friday, and lambs sold at \$6.50; yearlings \$6.00; wethers \$5.75; ewes \$5.35. All these prices out of a run of \$,500 head, and nothing extra choice. Clipped stock brings 50 cents less per hundred than same weight in fleece, but this margin will rapidly disappear and be entirely wiped out by the middle of May. High prices are expected to remain for the present.

sanra ke

Also Direct Line to

Union Pacific defeated attempts to ad-vance the market further and there were a number of small reactions. General business, however, was very singgish and the price movement inconsiderable. St. Paul preferred gained 1. United Fruit 1½ and Brooklyn Union Gas 3. Norfolk & Western sold off a point on the intended issue of a thirty-five million dollar mortgage and the Eries were under pressure, the common losing 3%, the sec-ond preferred 1½, and the first preferred 1%. Hocking Valley preferred dropped 3½ and Hocking Coal 1. Toledo, St. Louis and Western preferred rose ½, but the gener-al list was drooping and exceedingly dull. Bonds were steady at noon. When selling of Norfolk & Western and the Eries was suspended the market slif-fened, but the demand was largely cen-tralized in Pennsylvania and a few spe-cialties. Some large blocks of Pennsyl-vania were brought above 118, but the other coalers were immovable. During the afternoon hardly any of the active stocks covered a range of more than ¼ and many did not even vary ½.

AT SCOTTISH CHIEF.

Important Changes Taking Place in Bottom of Incline.

A telephone message from the Scottish Chief mine near Park City last night brought the information that a pleasing change is taking place in the bottom of the incline shaft now being sunk

Manager W. J. Lawrence said the rock is heavily impregnated with copper stain and he anticipates the ap-pearance of some pretty good ore in the very near future

FROM THE SHEBA.

Salt Lakers Return Favorably Impressed With Nevada Proposition.

President George W. Bartch of the Sheba Mining company returned from Nevada this morning, where he has been making an inspection. He was ac-companied by E. W. Griffith and George Woodson, and all gave evidences of en-thusiasm over conditions at the Hum-boldt county proposition, where a progressive campaign of development is being carried on.

Mr. Griffith, who went out at the solicitation of eastern clients, returned thoroughly convinced that the property is a good one and that it is being ec-onomically and judiciously operated.

YAMPA SMELTER CHANGES. Bingham Plant Will be Closed While

They Are Being Made.

That some changes are necessary in the Yampa smelter at Bingham has been apparent for some time. The management, it is said, has been confrontwith some serious problems since the furnaces were first blown in on account of unexpected changes in the character of the ores of the mine where they were least expected. Because of this, results have not been satisfactory, so the conclusion has been reached to remedy the derects and within the next few hours the plant will be blown out.

In the meantime the company will forward its ores to the Bingham Con. smeller for treatment. About 200 tons per day will be sent down.

While the changes are being inaugurated in the Bingham smelter the capa-city will be increased to \$00 tons per day. The plant has been handling about 175 tons per day. The shutdown will last probably 60 days.

MONTANA'S NEW HOIST.

Plant is in Operation and Giving Good

Fork Another shipment of gold bullion from the Century mine of Park Valley has arrived. Byron E. Shear of Denver is in the city en route to Tonopah, where he has mining interests. General Superintendent Clarence E. Allen of the Centennial-Eureka is in specting that Tintic property today. Work will soon be inaugurated at the D. & M. group at Pork City. The ground is owned by James Duffy and James Mara. The tunnel of the Great Western mine in the Big Cottonwood district has been completed to the length of 1,200 feet. A party of gentlemen from the oil fields of southeastern Kansas are said

to be here for the purpose of looking into the local oil situation, The owners of the Corona, property

at Park City have reported a new strike. The property is located just north of the town of Park City. The ore and bullion settlements re-

ported late yesterday were as follows: Crude ore and concentrates, \$31,700; base bullion, \$49,700; gold bars, \$17,400. Superintendent John A. Kirby of the Daly-West mine at Park City, who un-derwent an operation at the Holy Cross

hospital recently for appendicitis, is able to be out again.

The contract for three boilers which are to become a part of the equipment of the concentrator at the Cactus mine in Beaver county was let yesterday af-ternoon to J. J. Burke & Company, Each of them will be of 300 horse power capacity.

Will Henry and Lee Hunt, who are developing a valuable uranium property in the "Break," across the Grand River from Richardson are negotiating a deal with Salt Lake parties. A represent-ative of the syndicate is expected in soon to examine the property .- Moab Times

The "News" acknowledges the receipt of a topographical map of the Mt. Baldy mineral belt of Sevier and Piute counties, compiled by J. F. Gibbs, the well known mineralogist, of Marysvale, Appended is a brief study of the geo-logical conditions of that section. The The map will be of almost unestimable value to mining men interested in that part of the state.

Simon Bamberger has returned from trip to the Bamberger-Delamar mines at Delamar, Nevada. On the train which brought him to Salt Lake was a hipment of gold buillon of the value of \$15,000, which is on the way to the sub-treasury at New York. Mr. Bam-berger reports satisfactory conditions at Delamar. The mill is handling about three hundred tons of ore every (wenty-four hours,

Manager J. A. Czizek of the Lost Packer Mining company of Idaho has returned from camp. Before leaving he completed arrangements for the construction of twenty-five miles of wagon road over Mt. Estes. About \$10,000 will be expended for this purpose. About Mr. Czizek reports physical conditions at the mine as being very satisfactory and that it will undoubtedly show up at the end of the year with a good bullion record.

The smelter of the Pittsburg & Montana Copper company, at Butte, which has already had its trial run, is ready for work, says an exchange. The for work, says an exchange. The Pittsburg smelter, as it is called, contains many new devices for handling and treating ore. The plant will treat between 300 and 400 tons of ore per day. The mine is not yet in position to supply this amount, but the develop. ment is being carried forward aggres-sively and it is understood that the showing warrants the smelter. The amelter construction is said to have made the startling record of being finished earlier than was expected.

WM. M'KINLEY:

SAID

tom at present show 10 per cent cop-per, 14 ounces of silver and \$2 in gold to the ton. This shows that an ore body exists whose values are much greater than was originally calculated. From all indications, the richest and biggest ore bodies of the Columbus are

yet to be opened. The drift on the Braine fissure has been carried westward, past the con-tact for 300 feet. At that point it turns into the country rock and be comes a crosscut once more, paralleling the first crosscut which intersected fissure, about 1,000 feet away. the This present crosscut is driving on the strike line of the Howland tunnel, with which it will connect in about two months. The Howland tunnel is driving in from the mountain side at a point over 1,000 feet west of the Columbus tunnel. It has already been carried in about 700 feet. There remains about 300 feet to connect it with the crosscut now driving out from the Braine fissure. This achievement will provide ventilation and safety for the miners, as well as facilitating the operations of the property. The mill will be built at the portal of the Howland tunnel and all concentrating ore will be

trammed out through that course, the high grade ore coming through the Col-umbus tunnel. erection of the mill will begin on May 1, as it is calculated that the snow will be sufficiently cleared by that time to permit the work. The engineers say they can complete this work in 60 days if no obstacles arise, but the management is calculating on 90 days after the construction begins as the time when the mill will be ready for service. In the man while, development is progressing in a healthy manner and not a pound of ore is being stoped. A large stock pile of concentrating ore has accumulated from the development, however, in addition to the high grade ore which has been forwarded to the smelt.

The management is figuring on the concentrating ore running \$10 a ton, which will give a value of \$1,000 to the 100 tons treated daily. The costs are figured at \$4 a ton, including everthing, from the mine to the smelter, This leaves a profit of \$6 a ton or \$600 net from the mill alone.

In addition to this, there is the profit on the smelting ore, which will be selected by hand from the mine run as it goes to the mill. This will be a variable quantity upon which it is impossible to make a satisfactory estimate. The estimates on the concen-trating ore are made on the lowest grade of material now in the stock piles, and are looked upon as tirely conservative. The object of the company will be to mine for concentrating ore and not for shipping ore Whatever shipping ore is forwarded will be what is selected from the material on its way to the mill, and which is considered to be too high a grade to be concentrated. This will be thrown out and sent to the smelter without

treatment. As already stated, there has not been any stoping done. But the stopes have been opened, raises put in, sublevels run, and everthing is in prime condition for operations as quickly as the mill is ready. The present shipments of smelting ore, culled from the material which comes from development alone, is sufficient to take care of the actual mining operations, de-spite the fact that the transportation of 16 miles necessitates hauling it four miles by sled over wretched snow roads and then transferring to wagons for the remaining 12 miles, after

which it is loaded to cars. As quickly as the mill is completed the heavy construction account will be From that time forth the mine over. is expected to be on a paying basis, which will soon yield sufficient surplus to put it on a sound financial footing; after which it will be able to return profits to the stockholders. There will be no important new velopment work undertaken until af-ter that period matures. It is contemplated, however, as soon as the mine is in position to assume the undertaking, to develop the property by means of another tunnel at a level 400 feet below the present one. This will open up an immense area of addiKANSAS CITY.
