## LAKESIDE COPPER SHIPMENT COMING

President H. E. Beck Arranges For Sampling of Initial Lot Early Next Week.

CAR BEING LOADED AT SALINE.

Surface Showing Indicates Immense Copper Deposits-Ogdenites Locate Ground.

The initial shipment of ore from the property of the Lakeside Copper company on Promontory point, west of Ogden, will reach local sampling mills early next week.

H. E. Beck, president of the company, was down from Ogden yesterday to confer with Howard S. Stowe, the Salt Lake director of the corporation, and to a "News" representative stated that a car is being loaded at Saline, a station on the Southern Pacific, about one and one-half miles from the Lakeside mine.

Mr. Beck exhibited some fine specimens of copper ore, both oxides and "It is yet to be determined," said the president of company, "whether the ore deposit every reason to believe that it will We know we have a wonderful showfew shots the other day three car loads of ore was broken. This is the ore that we are going to ship. We do not expect the car that is to come in next week to contain sensational values; it is being taken out just as it was broken down."

Mr. Stowe expects to leave for the new copper camp tonight and will spend tomorrow on the company's ground. A good many Ogden people have visited the district within the past week and, it is said, have located the country for miles around the Lakeside property.

### WEEK ON EXCHANGE.

Daly Judge Closed Week With Inclination to Move Upward.

The week has closed with the mining stock market in a somewhat better condition than it was at the opening. In the east, prices have suffened, and that usually has a good effect locally. On the local exchange 122,483 shares were sold for \$149,194.88, against 148.577 for \$51,871.88 shares during the corresponding period last year.
Daly Judge, which has been sulking

for the past week, ended with an inclination to move upward again, it closing today on a sale at 111. Daly West is also in better tone, while New York, another Park City stock, is slightly

Alta stocks have been in demand. Columbus Consolidated has gone up about a dollar a share on the strength about a dollar a share on the attending of the late Important developments in that property. South Columbus has also moved upward and it seems to be the determination of those now in control of the property to open it up along ex-

tensive lines.

There has been considerable call for Tintic stocks and Ohio Copper has been the principal Bingham participant. The clesing quotations and sales to-

#### FRESNO COPPER SQUABBLE.

Shareholders Will Send Another Expert to California Property.

New York, July 28 .- A cable dispatch to a morning paper from Glas-

A much excited meeting of the shareholders in the Fresno Copper company was held yesterday. It was company was held yesterday. It was proposed to prosecute Vercoe, the manager of the company, who, it was stated, had disappeared. It was finally decided to send out a Glasgow mining expert to California to examine the company's ground and report, as it was considered that it would be foolish to abandon the mine on the view of one expert along who had deview of one expert alone, who had de-clared the property of little value. The chairman said he was the largest separate holder and he had not sold single share.

## APEX TRAMWAY SOON TO BE BUILT

All Material on Ground and Construction of Terminals to Start Next Week.

NEW COMPRESSOR PLANT.

Foundations Are in and Boilers Are Being Installed-Building to Go Up at Once.

The management of the Utah Apex Mining company at Biagham has experienced some delay in getting the work started on the proposed aerial tramway which is to convey ore from the mouth of the Andy tunnel down to the tracks of the Rio Grande Western, now being extended into Carr Fork

For the reason that the railroad company has not definitely decided on the location of the grade in the vicinity of the Apex company's dominions, the mining company has been unable to lo-Sate its lower ore bins and terminals; terminal during the coming week.
The upper bins will be constructed to

hold 300 tons, and the lower bins, 500 tons of orc. All the material for the tramway, which is to be 2,500 feet long. is now on the ground as well as that required for the construction of the terpinals and bins. The new air compressor, ordered

some time ago has not yet arrived, but the foundations for the plant have been finished and installation of the boilers s in progress. The construction of the compressor bulliling will be started within a few days.

TO TRANSMIT AIR.

Pipeline Being Laid to Upper Workings of So. Columbus.

The development of the South Columbus mine at Alta is now being conducted under the supervision of A. O. Ja-cobson, superintendent of the Columbus Consolidated. It is the intention of the management to do some prospectlumbus property; out of which numer-ous shipments of high grade ore were made in the early history of the camp. To facilitate this work, a pipe line 4.00 feet in length, is being laid, through which air will be conveyed from the compressor plant of the Columbus Consolidated, for the operation of machtne drills.

#### BETTER THAN EXPECTED. What Engineer Pearse Says of Developments at Douglas Mine.

So well pleased was he over the reports received from the Douglas mine near Yerrington, Neva upon his arrival from the east, A. L. Pearse, consulting engineer of the Nevada Copper company, immediately wired the Boston of-fice of the company that developments up to date were far better than he exceted they would be,

Advices from the west brings the information that exposures of ore have been made along the surface for almost s mile, and that the mineralization shows a width of about 800 feet. Mr. Pearse left for the Douglas this afternoon, and expects to be absent about two weeks.

LATE COLUMBUS STRIKE. Manager Jacobson Says it is an In. portant One.

Tony Jacobson, manager of the Co-lumbus Consolidated Mining company came down from Alin last night after spending two days in camp during which time he made a careful inspec-tion of the new strike made early in the week in the first west crosscut from the tunnel level of the Columbus Con

The strike, Mr. Jacobson says, is un-dobtedly one of the best ever made in the mine and the orebody bears every indication of permanency. It is in the same contact along which the other important orebodies of the mine were found, but fully 1,500 feet away from

The vein has been followed along the contact for about 35 feet; the whole face of the drift is in first class ship-ping ore and while the exact width of

the deposit is yet to be determined, it is known to be fully six feet.

Assays taken show values of from 30 to 40 per cent lead, 40 ounces silver and 3 per cent copper. Three men are working in the drift, one on a shift and each have been breaking from 10 to 12 mine carloads of ore. These cars hold one and a quarter tons, so it can be figured out that the three men are getting out at least 50 tons a day, and which has a gross value of close to

The ground in which the strike was made was purchased from Albert Thomas not long ago. Mr. Jacobson states that enough ore has been taken out already to pay the purchase price of the ground twice over.

#### ORE IN WEST CROSSCUT.

Peter Porter Received More Good News From Montezuma Today.

Peter Porter, manager of the Monte-zuma mine of Markham guich, Bing-ham, was in telephonic communication with camp this morning, and was advised that the west crosseut from the shaft had broken into the vein towards which it had been directed. The vein was disclosed last night and the morning shift was clearing up after it while Mr. Porter was in conversation with the mine foreman.

The south drift continues to look good and yesterday nine and a half tons of shipping ore was broken, which assays about 60 per cent lead, 27 ounces silver and from \$2 to \$5 in gold. This ore will bring about \$40 a ton in the local mar-

MAY BE TROUBLE.

Tonopah and Goldfield Miners Are Talking Strike.

A private message from Tonopah to-ay conveys the information that the day conveys the information that the miners of Tonopah and Goldfield have agreed to demand an eigh-hour working day and that unless mine owners grant it to them, a strike will be ordered, effective on Aug. 1. It is said the Tonopah Mining company has agreed to the eight-hour schedule; but other companies are holding out for a nine-hour working day.

It is to be hoped the difficulty will be adjusted, as a strike at this time would work seriously to the disadvantage of Nevada mining interests.

NEW NEVADA CORPORATION. Articles of incorporation of the White Pine Gold Mining company were filed in the office of the county clerk rester-

day. The company is incorporated for the purpose of taking over and operat-ing the Snow Bird and Owl mining claims in the Granite mining district of

The authorized capital stock of the company is \$500,000, divided into shares of the par value of \$1 each. The offcers are P. H. Cannon, president; R. E. Taylor, vice president; Joseph T. Hyde, secretary and treasurer. The board of directors consists of the officers and Brigham T. Cannon and John Dorius.

NEW WAGE SCHEDULE. One Will Go Into Effect in Tintic District Next Week.

A new schedule of wages will go into effect in the Tintic mining district on Aug. 1. Single jack men are to get a rulse of 50 cents, making their wages \$3 per day. Machine helpers get the same raise, and will now receive the same amount. Muckers get no change from their present wages, \$2.50 per day and machine men will continue to ge heretofore. The foregoing is the result of a move-ment inaugurated by the miners some

time ago for higher wages. JUDGE VEIN SYSTEM.

What Staff Correspondent Says of Big Park City Mine.

Claude T. Rice, staff corresponden of the Engineering & Mining Journal has contributed an article on the Daly Judge mine at Park City and he treats interestingly of the vein system of that

great property. He says:
The vein system of the Daly Judge
is practically the same as that of the
Daly West. It consists of four known osits. The middle vein, or contact Daly West-Quincy contact; the fissure sponding to the Daly West 01-0; which has been opened up below th ,200-foot level by several drifts; the south or back vein; and a north vein, probably the Daly tissure. Little is known about this north vein. It has been opened by a crosscut from the 1,266-foot level. It lies about 700 feet erth of the middle vein, and appears to dip to the north.

"The middle vein occurs in a roll or trough at the contact between the lime-stone and the overlying quartitie. It dips 15 or 20 degrees to the north. This orebody is rich in zinc, compared with other ores of the Park City, but its chief value is in lead and silver. The McSorley stope on the 1,200 and the Big stope on the 1,250 are the newer developments along this contact. The orebody in the McSorlev stope varies from 10 to 30 feet from foot to hanging an 1 probably averages 15 feet thick. It has been developed by stoping and also by a system of raises for a distance of 400 feet. In the Big stope, on the 1,260foot level, the orebody is, in many places, 30 feet from wall to wall, or 60 to 75 feet measured along the horizon-In both these stopes there is much first class ore and a considerable part of the width of the deposit is so strongly mineralized that it will pay for milling. The middle vein has been de-veloped for over 1,000 feet in new and workings, and the orebody has

proved fairly continuous on the 1,200fissure, corresponding to Daly-West 01-02 fissure, some good ore-bodies have been developed, and much of it carries considerable firstclass ore. The walls of this fissure are quartite. Both in the 1,500 and 1,400-foot levels five fingers, or shoots, of ore have been developed in a distance of 1,000 feet along the vein. These vary from 50 to 200 feet long; the distance between walls varies from 5 to 15 feet. The whole width is not sufficiently rich to mill, but there is almost always a band of first class ore and then quite a layer of second class, so that the major part of the width of the fissure is well mineralized. This fissure deposit in the Daly Judge carries very little farthest finger of ore toward the sout! west is heavily mineralized with pyrite and some lead and carries about \$3 in gold. It is said that the gold values in the Daly-West increase toward Bouanta Flat, to the southwest. Owing to the silicious character of the majority

of the eres treated in the smelters ad-

facent to Salt Lake, this fron-bearing

ore is very desirable for fluxing pur-

placed the 3-inch air pipe and also the vertical ladder-way. The shaft is tim-bered with ordinary 12x12-inch Oregon bine sets placed with 5-foot centers, and agged with 3-inch vertical planks.

"Levels have been run from this shaft, and stations cut, at 500, 700, 1,200, 1,400, 1.500 and 1,600 feet. The stations are 15 feet wide and are about 15 feet high next the shaft. They are timbered mgn aext the shart. They are dimbered with f2x12-inch native pine, consisting of two posts and cap. These are lagged on top and at the sides with 2-inch planks. The stations are laid with double tracks extending 50 feet from the shaft, and are floored with planks covered with iron sheets. Besides these largest there are several billed largest. levels there are several blind levels, such as the 1,260 and the 1,300, and others in the upper workings.

Two-compartment raises, consisting of a chute and man-way, are earried up at intervals of 190 feet in the orebodies. The ore is mined by overhand stoping. with hand and machine drilling. hand drilling is all single-jacking, and or a single-jacker in the softer oreoody, while only about 4 feet can be drilled in the hard quartzite filling which occurs in some of the bodies. Single-jacking is used because it is easier to keep the first class separate

been tried but they did not prove satisfactory. In the larger stopes 24-inch drills are used. One man runs them and they will drill 7 holes, varying from 3 to 4 feet deep per shift. The pressure of the air at the receiver is 85 pounds per square inch; it might be an improvement to use a higher air pressure. Large 3¼-inch drills are used for drifting. Drifts are generally about 7½x6 feet."

#### CONCENTRATES.

H. S. Woolley has gone to Black Horse, Nev., on mining business.

J. E. Darmer, manager of the May Day mine in the Tintic district, will spend tomorrow at that property. Charles O. Ellingwood, general manager of the Western Exploration company, has returned from California.

A shipment of 150,00 pounds of pig copper is enroute from the smelter of the Utah and Eastern Copper company at Shem City. Washington county.

An eastern publication says the Unit-ed States Smelting, Refining and Mining company is seeking to extend its operations into Peru, South America.

Prof. O. A. Palmer has returned from Brigham City, where he went for the purpose of conducting an expert exam-ination of the Wasatch Mining com-

Robert Brown, superintendent of the Continental-Eureka Mining company, is up from Eureka to confer with United States Smelting, Refining & Mining officials today.

The ore and bullion settlements ported late yesterday afternoon by Mc-Cornick & Company were: Crude ore and concentrates, \$28,000; base bullion, \$65,000; gold bullion, \$6.900. Henry Catrow, secretary of the Ohio

Copper company, is expected to arrive from the east this afternoon, accompanied by his mother, Mrs. N. J. Ca-

trow, who comes to spend the summer The Utah Consolidated Mining company has been made defendant in a suit filed yesterday by Richard McCoy, who asks for \$600 damages claimed to have been done to his farm by smelter smoke from the defendant's smelter.

S. Herbert Williams, managing director of the Shawmut Consolidated mine at Bingham, came in from camp yesterday afternoon and reports that the main tunnel has encountered another fissure which shows a width of about 18 inches and at a depth of about 300 feet below the surface. The fissure carries fair copper values and will be followed. Mr. Williams expressing the belief that it will lead to a larger body.

The Farrell Mining company floated its banner to the breeze in Butte yes-terday, and if everything goes right it will begin developing its property within a few days. The company is or-ganized under the laws of Montana, and its capitalization is \$1,000,000, in 500,000 shares, but it is understood no stock will be placed on the market. The directors of the corporation are A. T. Morgan, Walter C. Lewis, Donald Campbell, W. H. Hall, Daniel Tewey, Carlton H. Hand and J. D. Slemonds. Anaconda Standard.

One hundred De Forest Wireless stock at \$3.00. Must be sold at once, so give us a bid, E. M. West & Co., Tel. 165. \$27 D. F. Walker block.

# AFFECTED STOCKS

New York July 28-Prices on the stock per, 51/65% per cent. arket today started generally higher, but some of the most prominent market leaders showed the effects of realizing. Changes were generally small and dealings on a moderate scale. Northern Pacific advanced a point. The other-transcontinentals. Amalgamated Copper and

The Back, or south, vein dips 70 degrees to the south and has been developed for a distance of two reet, berrianding near the Daly West end line and going southwest. The ores in this vein likewise occur at shoots separated from each other by barren bars. There are three or four shoots which vary in length from 5 to 12 feet. The orebodies in the back vein have not yet been thoroughly developed.

The Daly Judge orebody is opened up by a series of levels driven from a three-compartment shaft. This has two holsting compartments 4½x5 feet in the dear. In the ladder compartment are placed the 3-inch air pipe and also the vertical ladder-way. The shaft is timbered with ordinary 12x12-inch Oregon oine sets placed with 5-foot centers and trees the south and has been deciming 4.

Continentals. Amalgamated Copper and National Lead were slightly lower, the last named declining 4.

Prices fluctuated singuishly and irregularly. The ladustrials were most prominent. United States Steel was heavily dealt in up to 3%. Smelting gained 2½ and Amalgamated Copper 14. Lackswam as rose 19. Delisware & Hudson 2. There were declines of a point in Great Northern preferred and International Paper preferred. The coalers became prominent. Reading rising 2%. Central of New Jersey 3½. Delaware & Hudson 3½ and Wabash preferred and United States Pipe preferred 1. Prices soid off sharply on the disappointing bank statement, but the list was supported and railled strongly at some points. The closing was active and irregular. ly at some points, tive and irregular.

#### PRODUCE.

Chicago, July 22.—Cash houses were active seliers of wheat here today and as a result the market was week. The principal bearish influence was the more favorable news from Russia. September opened a shade to 160% lower at 18% to 18% and sold off to 75%, railied to 76, where it closed half a % lower.

The corn market opened weak and continued so. September opened 160% to 160% lower at 50%.

Oats opened weak, September 160% lower at 32%.

Provisions were quiet and easy. September pork was off 2% at 17.00. Lard was down 2% at 5.67%, Ribs were a shade lower at 3.15.

## **EVERYTHING MAKES** FOR PROSPERITY

New York, July 27 .- R. G. Dun & Company's Weekly Review of Trade tomorrow will say:

"Comparisons of the volume of curent business, with results at the corresponding date in previous years, are so uniformly favorable that the outlook can only be regarded with confidence, Semi-annual statements are now sufficiently complete to make it certain that the first half of 1906 was the most prosperous six months period in the nation's history, and, unless heavy can-cellations occur, the last half of the year will establish a still higher record. Complaints of inadequate labor supply are universal. Building operations are extensive, and would be much greater in extensive, and would be much greater if the cost of labor and materials had not caused the abandonment of many plans. Railway earnings in July thus far surpass corresponding reports of last year by 8.5 per cent, and foreign commerce at this port alone for the last week shows gains of \$2,110,472 in exports and \$1,589,518 in imports.

"Failures this week number 216 in the

Failures this week number 216 in the United States, against 214 last year, and 15 in Canada, compared with 27 a
