MISCELLANEOUS.

Shot by his own Orders.

Jonathan Hartgroves, of Hillsboro, Ill., owns a large water-melon patch and has a chronic fear of the perennial melon thief. Lately he loaded a big duck gun with a heavy charge of shot and gave the weapon to his 12-year-old son with instructions to watch the patch till day-break and shoot any one he saw in The old man wondered if the it. boy was "dead game," and whether he would really shoot. So Jonathan dressed himself and sneaked into the melon patch. He was just on the point of devouring a lucious melon when the boy emptied both barrels into the old man's body. Jonathan is badly hurt and may die.

Preserved in a Sait Mine.

In a salt mine near Hermannstadt, in Hungary, which had for many years been full of water and was visited by tourists on account of its great depth and its repeating echo, a recent heavy rainfall raised the water to an extraordinary height. Recently a number of dead bodies appeared on the surface, and they were taken out, with consider-able danger to those who undertook They were found to be the the task. bodies of Hungarian Honveds, three hundred of whom fell in the battle Viz Akna on the 4th of February, of 1849, and instead of being buried were thrown into the salt lake of lake of the mine. The bodies are so well preserved that the wounds which caused death may be seen quite plainly. Two of the bodies are headless.—Cor. London News.

Women of Business.

Women are intolerant of one another in business and intensely jealous in society. Mistress and servant are not the only classes be-tween whom dignity of demeanor is set aside. And then the unkindness!-it makes a generous spirit shudder. Said a poor washerwoman who has a family of seven to support: "The gentlemen 1 wash for give me old clothes enough for my three little boys, but I have never had five cents' worth from the ladies. They give me old dresses and cloaks and sometimes a hat, but for each I have done two or three week's washing in payment. That isn't all. They are all the time accusing me of stealing their handkerchiefs."

A Transpacific Cable.

The Colonies and India, of London, say that "the breaking of the Australian cables and the conse-quent cutting off of those colonies from communication with the outer world for several days emphasizes in the strongest possible way the necessity of constructing an al-ternative cable across the Pacific ocean between British Columbia and Sydney to Brisbane. The lesson will no doubt not be lost upon our Australian cousins; It is said that her majesty's government has decided not to share in the guarantee the companies require in order to effect the proposed reductions in the

existing cable rates, and it was hardly expected that it would do so. It might, however, view with greater favor the laying of the new line, and the subsidies the colonies are now asked to give for perpetuating for a time the monopoly of the old line, with assistance from Canada and from the imperial government, would, it is believed, permit of ar-rangements being made for the con-struction of the Pacific cable, and probably insure a reduced tariff by both llnes."

A Dutch Princess.

Princess Wilhelmina, the Dutch heir apparent, is now ten years old, says the St. Louis Republic. The Princess' governess is an English lady. The Princess can express herselfvery well both in French and English. She has not learned Ger-man, the language of her mother. She has a pretty garden of her own, with chalet and pigeon croft. The Princess rises at 7 o'clock and goes to her mother's rooms. Then she goes to her father and gives him a morning kiss. At 8 o'clock the royal family takes breakfast, the Princess being present, as at all meals. After breakfast she receives lessons till 11 o'clock. She then goes to the Queen's rooms, where the time is spent in conversation or her majesty reads and explains a chapter of the Bible. Before lunch, which is served at 12:30 o'clock, the Princess takes a drive in her pony carriage or amuses herself in a boat on the large bonds of Loo. After lunch she has more lessons, plays with her toys and takes a drive with the Queen. At 6 o'clock dinner is served and a few hours afterward the royal family retire to their apartment.

Was he a Mean Man.

One of the meanest men in Harlem has made his will, which some day will be offered for probate. The testator. as reported in the New York Mercury, sets forth his peculiar views as follows:

"I declare this to be my last will and testament. I claim to be perfectly sound in body, but I do not presume to affirm that I am sound in mind. would not stultify myself by set-I would not stuilify myself by set-ting up such a pretension. I have about \$60,000 in invested funds. What a vast amount of hy-poerisy, sorrow and falsehood I could buy with that amount. I first thought of bequeathing itto charity. But what's the use? The createst But what's the use? 'The greatest benefactors of humanity are war and cholera. Besides I owe a debt of gratitude to my wife, who lives I don't know where. She rendered me the greatest service in her power-she abandoned me one flue day and I never hear of her since. In remembrance of this kind act I shall make her my sole legatee; however, on the express condition that she shall remarry at once In this way I shall he sure of knowing that my death was regretted by one human being at least."

How Coyote Pelts are Captured.

trapped or done to death by dead' fall or any familiar gin. The only method is to poison them. Their pelts are valuable for robes and many men--"coyoters"--make a business of their collection every winter. It is not feasible to put the poison in a piece of meat as the vivtim would gulp it down, lope off a matter of four or five miles before he died, and the coyoter would never find him. They take a pine beam eight or ten feet in length and six inches square. At inter-vals of two feet a hole is bored with a two inch auger-say four inches deep. A big kettle of tallow richly intermixed with arsenic is melted, ladled out, poured into these holes and allowed to cool. These tallowed beams are then placed around on the prairie for the pleasure and profit of the coyote. That night some of the coyote. That night some gray vagrant, with nose held high and scouting up the wind smells up the tallow. He draws near. He announces the find by a yell of joy and begins to lick the tallow out of one of the augur holes. Other coyotes come into the game and each selecting a hole goes on his last debauch. In the morning the coy-oter comes out and skins them. They never get ten rods from the tallow after they once find it.—Ex.

Electricity in Agriculture.

It appears from the results of a series of experiments recently undertaken in Russia by N. Specnew dertaken in Russia by R. Speenew that electricity may eventually be made to play a prominent part in agriculture. These experiments, which extended over five years, showed that by submitting different seeds to the action of an electric current their development is rendered more rapid and complete. The seeds of haricot beans, sun-flowers, winter and spring rye were used. A second series of experiments was made with pot herbs and Ments was made with pot herbs and flowering plants at Kief. The in-fluence of the electrical treatment was shown by a larger crop and by the growth of vege-tables of enormous dimensions. In a third series of experi-ments electricity on a large scale was annihed, static electricity being used applied, static electricity being used instead of current electricity. The The results were quickened ripening and results were quickened ripening and larger growth. Barley ripened twelve days sooner with electro-culture. Potatoes treated in the same way seldom showed disease, only 0 to 5 per cent being bad, in-stead of 10 to 40, which is the usual percentage. An important factor in this treatment is that vines which have been subjected to it possess immunity from phylloxera, and this points to a new means of combating the microscropic diseases which attack vegetable growth. It is suggested as a weapon with which to fight the potato bug and the army worm. The cost of the process is comparatively small.—*Chicago News*.

An Arabian Baby's Tollet.

A royal baby's first totlet in A rabla consists in winding a bandage about its body after it has been Coyotes are very wise. The pro-verbial fox is a driveling idiot by comparison. They can not be steel its arms and feet are straightened,
