Scientific Expedition Class from B. Y. Academy Organized.

START IN APRIL.

Intention to Visit Mexico, Centra! and South America-Objects of the Party.

President Benjamin B. Cluff of the B. Y. Academy, Provo, was in the city on business today. In conversation with a representative of the "News" President Cluff unfolded a plan whereby it is proposed to study a number of the sciences by actual and practical ex-

Recently, under the auspices of the

academy, there was organized a scientific expedition party, which will shortly make a tour of Mexico, Central America and portions of South America, for the purpose of collecting specimens in mineralogy, geology, botany and zoology. It is also the purpose of the expedition party to visit ancient ruins of cities recently discovered in Central America. The crowd will be made up of about twenty persons, di-vided into four sections. The first section will study the general topography of the country, together with the ruins; the second section will study geology and mineralogy; the third will make a study of botsny and zoology, and the fourth section will consist of a corps of photographers, who will take pictures of the most prominent places. The company will start on the tour immediately after April conference, and intend going all the way by horseback and pack. This will be the first expe-cition of the kind yet undertaken by Utahans. President Cluff said the ob-jects of the expedition were purely

Beautiful Pin Sent to the Distinguished Lady Last Evening.

The fine brooch that was made for Mrs. William J. Bryan, by the Woman's Democratic club of Salt Lake, as a memento of her last visit, was sent to her last evening.

The design of the pin is exquisite, being a pin and pendant combined, with a diamond in the center, surmounted by sapphires, and the body of pearls. The following letter was sent with the pin:

Mrs. W. J. Bryan, Most Honored and Respected Lady: The Woman's Demo-cratic club of Salt Lake City has the honor to present to you this brooch or pin as an emblem of our love and a souvenir of your visit to our beautiful honor us by your acceptance. We desired to present you an emblem made from Utah material and according to our artist's design. The workman, however, failed to create the design to our satisfaction, hence the delay. Consequently, we decided to select somemore worthy of your acceptance.

May the foundation and shape of this pin remind you that our love is pure, brilliant as the star that points to the path of true happiness; the jewels repesenting a purity of purpose, innocence

We trust it will meet your approval and that you may live long to enjoy it. With love and best wishes for yourself and family and kind regards to your honored husband, the champion of silver and defender of the people's rights, W. J. Bryan, we are very respectfully yours in truth,

MEDICAL SOCIETY ON VACCINATION.

Report of Special Committee Received-Endorsed by Members.

WOULD MAKE IT COMPULSORY

Board of Education Upheld in Its Recent Action - Discussion at Last Evening's Meeting.

The Salt Lake Medical society held a special meeting last evening, at which the following physicians were present: Drs. E. F. Root, W. S. Ellerbeck, R. W. Fisher, Samuel Hughes, Salathiel Ewing, A. S. Bower, W. Y. Croxall, P. E. Jones, H. S. Scott, J. S. Witcher, Ira A. E. Lyons, T. B. Beatty, C. G. Plummer, J. C. E. King, L. W. Snow, P. J. Mc-Kenna, C. P. Hough, A. J. Hosmer, A. C. Maclean and E. O. Jones of Murray.

A request of the special committee on the smallpox situation was read, and a discussion had on the best means of checking the disease. The committee, consisting of Drs. E. S. Wright, S. Ewing and A. C. Behle, reported as fol-

Your committee to whom was referred the question of vaccination and statistics bearing upon the subject beg leave to make the following report: As an introductory we find an article

by Dr. Ernest Hart (now deceased), who was editor of the British Medical Journal and an acknowledged authority on preventive medicine and hygiene, very pertinent.

Impartial students of the history of medical progress readily admit that vaccination, which has now stood the test of practice for a century, remains today one of the greatest medical pro-phylactics the world has ever known. Like all other measures for improving the general health of the community, it emanated from and has been fostered by the medical profession. But the assertion so frequently made by ignorant or unscrupulous laymen that the pro-fession has been influenced in its exertions to maintain the practice by motives of pecuniary benefit is so obviously ungenerous as to only call for a pass-ing notice. The number of doctors who derive any substantial benefit from the practice of vaccination is very small. and those who consider that the bulk of medical men are so inordinately mercenary as to lend themselves to the support of a false system for the sake of a few dollars a year should remember that it is the prevalence of disease and not its prevention which best pays the practitioner. A widespread outbreak of smallpox must prove far more re-munerative than the small fees to be earned by vaccination. If people would but bear in mind that the sanitary science of which England is today so justly proud, and which has led during the last fifty years to a marvelous reduction in the mortality from filth diseases and an increase in the average length of life, owes its origin and develmore readily understand that had vac cination not possessed the powers claimed for it the medical profession would have been the first to cast it aside as they have rejected other false practices.

DEFAULTS IN VACCINATION.

The falling off of vaccination is no doubt largely due to the absence of any widespread epidemic of smallpox throughout the country within recent years. The feeling of false security thus created has led a number of persons to put off for the moment the temporary inconvenience of being vaccinated. As might well be expected under these circumstances whenever smallpox threatens to spread in a district, there is a rush for vaccination among the unprotected which, by straining the local resources to their utmost limits, is not calculated to secure the most efficient protection in all cases. Moreover, experience has shown that with the subsidence of the immediate danger the rule of apathy again sets in.

INFUENCE OF ANTI-VACCINA-TORS.

But although individual apathy has much to do in the falling off of the amount of vaccination, some of the baneful influence is attributed to the opponents of the system, who persistently disseminate gross misrepresentations calculated to create a distrust of vaccination. It has been truly said that if persons who so readily neglect vaccination at the bidding of a few energetic but not too scrupulous agitators, could look on the sight, common in smallpox epidemic, of a family living together in the same house and under precisely the same conditions invaded by smallpox, the unvaccinated members developing the disease in all its loathsome virulence, the recently vaccinated or revaccinated escaping altogether and those who years previously have been vaccinated more or less efficiently escaping with a few spots and slight constitutional disturbance, the perverted statistics and the sophistries of the an-ti-vaccinators would be brushed aside forever.

NECESSITY OF VACCINATION. It has already been shown that in the variety of lessons taught by careful study of recent statistics and a comparison of them with the older figures the most obvious and important isallowing of course for a few exceptions which prove the rule-that efficient vaccination in infancy affords an almost absolute immunity from smallpox up to about ten years of age, and that after that date the operation must be efficiently repeated. Efficiency, how-ever, is essential. Certain anti-vaccinators assume that all vaccinationgood, bad and indifferent-must be regarded as equally protective or rather unprotective against would be scarcely less absurd to argue that the mere visit to a doctor's office should be regarded as proper vaccina-Vaccination may vary very much in quality; and the more closely the vaccinarecent epidemics been studied the more obvious has it become that a deplorably large proportion of the nominally vaccinated today have been most inefficiently vaccinated and are consequently ni many cases almost unprotected against an attack of smallpox. Better not vaccinate than place them in a state of false security, and at the same time endanger the practice of one of the greatest prophylactics of modern times. The evil results so often referred to by anti-vaccinators can easily be traced to faulty methods I nvaccinating, such as care-

agement of the case. INFLUENCE OF VACCINATION

lessness in employing modern methods

of asceptic work, the selection of proper

vaccine matter and subsequent man-

out of 451 vaccinated children under 10 | years of age attacked by smallpox only twenty-four showed any "pitting" on recovery; whilst in nearly all the children of the unvaccinated class were incidentally inspected in the course of the inquiry, the attack of smallpox was of a severe type and in a majority of cases was followed by considerable pitting.

STATISTICS AND TABLES.

No fact is better attested than this

protection in the case of smallpox. The proof of the degree of it is seen at a glance by observation of statistics in countries and cities where they are most accurately kept. Thus in Sweden the mortality from smallpox in the twenty-four years before the increduction of vaccinia (1801) was 2,050 per 1,-000,060 annually; after vaccination 158 per 1,000,000. Drysdale says of Berlin that the mortality in that city during the epidemic of 1878-74 rose to 243 and 262 respectively per 100,000 inhabitants. Thereupon vaccination the first year of life was made compulsory, and re-vac cination in the twelfth year of life, with the result that in the first year of enforcement (1875) the mortality fell to 3.6 per 1,000; to 3.1 in the year 1876; to 0.3 in 1877; and so on for succeeding years down to 1883 with an average of 1.7 per 100,000. Corbally reports that the vaccinated children of Sheffield (1887-8) had as compared with the unvaccinated children a twenty-fold immunity from attack and as a 450 fold security against death by smallpox. These facts render further statements superfluous, but a few points may be added from army life. Army statistics are especially valuable for their accuracy. Thus Schultze shows that since operation of the German law the annual average cases of smallpox per 100,000 was in the army of Germany 4.94; of France 169.72; of Austria 374.0. During the Franco-German war (1870-71) the mortality of smallpox in the unvaccinated French army was while that of the vaccinated German army was but 261. As already stated elsewhere, there has been reported but one case of death from smallpox in the German army since 1874. Morbidity shows the same results as mortality statistics, for since the enactment of the compulsory law in Germany (Schultze) there have been attacked with smallpox annually: In the German army, up to 1887.... In the French army, up to 1886.....169.0 In the Austrian army, up to 1881....317.5

clined as the councilman from the money to a paper that had taken such strong issue with the members of the Medical society and suggested that the society buy sufficient copies of the other papers to send one to each subscriber of the "News," free. Continu-ing he said, however: "I believe the "News" will print it. This society cannot down Penrose. All the medical societles in American couldn't do that."

Dr. Hough said that there was no doubt as to the attitude of the "News" on the vaccination question and that it had done untold injury to the cause. But if the people did not want to be protected from smallpox the only thing for them to do was to let them take the consequences.

The motion of Dr. Jones, that the report of the committee be accepted and endorsed as the sentiment of the Foclety, and that the daily papers be asked to publish it in full, was then

put and carried by a unanimous vote. COMPULSORY VACCINATION. As to compulsory vaccination Dr. Fisher said that neither the board of health nor the board of education had the power to enforce it. That was something, if done at all, would have to be done by city ordinance. He com-mended the board of education on its action on the vaccination question and said the society should go on record as upholding it in what it had done. The merits of vaccination were then iscussed and developed the fact that all the members of the society approved Dr. Jones moved that it be the sense of the society that the board of education require all children attending the public schools to show satisfactory signs of successful vaccination as a condition to their being allowed to at-

unanimously. Attorney E. B. Critchlow, a member of the board of education who was present at the meeting, was asked if he thought the board would maintain its position with respect to excluding unvaccinated children from the schools, Attorney Critchlow said the matter rested almost entirely with the board of health. If the latter instructed the board of education to admit only vaccinated children to the schools, it would, he thought, be a bar to the successful prosecution of an action against the board of education for denying admission to the schools of children who had not been vaccinated.

tend, and that the society require the

proper health authorities to take such

action as will sustain the board of edu-

cation in that course, and that the soci-

ety does not approve of closing the

schools. The resolution was carried

THE REPORT DISCUSSED.

Dr. Philo T. Jones suggested that the daily papers be requested to publish the ommittee's report in full. At this point Dr. Bowers inquired if it was a fact that compulsory vaccination had been abolished in England. To this inquiry Dr. Hugher, who had been a practicing physician in Great Britain, said that the law of the realm had been so modified that persons satisfying the courts that they had conscientious scruples against vaccination would be relieved therefrom. The law had likewise been amended in that it prescribed that vaccination should be done by a public vaccinator and in the most improved scientific manner that has been prescribed. The effect of this new law was that evasions of vaccination since it went into force, two years ago, were forty per cent less than in any year for the past forty years, and that vaccination was done in England

more than it ever was before. Dr. Bowers's question having been disposed of by the reply of Dr. Hughes, Dr. Fisher said that he was in hearty accord with the suggestion of Dr. Jones -that the newspapers of the city be requested to publish the committee's report in its entirety instead of giving a

reporter's synopsis thereof. Dr. Beatty was also of the opinion that the report should be published in full, particularly in the "News" be-cause it "reached a class of readers that no other paper did." He would be willing to pay for the insertion rather than not have it appear at all. The medical in mitigating the severity of smallpox councilman from the Fifth here paid is well shown in the official records of his respects to the "News" and its edi-

A STRINGENT FOOD LAW. Prohibits the Use of Arsenic or Alum in all Articles of Diet.

The law enacted by the Missouri legislature, a copy of which was recently published in our columns, and which prohibits the manufacture or sale of any article intended for food or to be used in the preparation of food, which contains alum, arsenic, ammonia, etc., places that State in the lead in the matter of sanitary legislation.

Laws restricting the use of alum in bread have been in force in England, Germany and France for many years. In this country, in Minnesota, Wisconsin, Michigan, Ohio, Kentucky, and several ether States, direct legislation in reference to the sale of alum baking powders has also been effected. In several of these States their sale is prohibited unless they are branded show that they contain alum, and in the District of Columbia, under the laws of Congress, the sale of bread containing alum has been made illegal. Following are the names of some of the brands of baking powder sold in

Baking Powders Containing Alum

out and keep it for reference:

this vicinity which are shown by re-

cent analysis to contain alum. House-

keepers and grocers should cut the list

Chicago. PERFECT Contains Alu Manf. by Perfect Baking Powder Co., .Contains Alum St. Louis.

Contains Alum Mant. by Saltair Baking Powder Co.,

In addition to these, many grocers

sell what they call their own private or special brands. These powders are put up for the grocer, and his name put upon the labels by manufacturers of alum powders. The manufacturers of is said, find their efforts to market their goods in this way greatly aided by the ambition of the grocer to sell powder with his own name upon the label, especially as he can make an abnormal profit upon it. Many ers, doubtless, do not know that the powders they are thus pushing are alum powders the sale of which would be a misdemeanor under the law re-

It is quite impossible to give the names of all the alum baking powders. They are constantly appearing in all sorts of disguises, under different names and at all kinds of prices, even as low as five and ten cents a pound. They can be avoided, however, by the housekeeper who will bear in mind that all baking powders sold at twenty-five cents or less per pound are liable to contain alum, as pure cream of tartar pewders cannot be produced at anything like this price.

PREACHING AND PUBLIC SPEAKING."

Of the 5,000 copies of this popular book published last year only three or four hundred remain and the author has decided to sell these through the "pitting," or permanent disfigurement following the disease, again by the length of stay of patients in the hospital. From Doctor Bary's report in the Sheffield epidemic of 1887-8, we find that
