

the semi-lunar valves, and a slender clot of fibrin was found in the aorta, where it was divided about two inches from these valves for the removal of the heart. The subcutaneous adipose tissue divided by the incisions was a little more than one-eighth of an inch thick over the thorax, but was thicker over the abdomen, being about a quarter of an inch thick along the line alba, and as much as half an inch thick towards the outer extremity of the transverse incision. On inspection of the abdominal viscera the transverse colon was observed to lie a little above the line of the umbilicus. It was firmly adhered to the interior edge of the liver. The greater omentum covered the intestines pretty thoroughly from the transverse colon almost to the pelvis. It was still quite fat and was very much blackened by erroneous congestion. On both sides, its lateral margins were adherent to the abdominal parietes opposite the eleventh and twelfth ribs. On the left side the adhesions were numerous, firmly organized and probably old. On the right side slight pleuritic adhesions existed between the convex surface of the lower lobe of the lung and the costal pleura, and firm adhesions between the interior edge of the lower lobe of the pericardio and diaphragm. The right lung weighed 32 ounces. The posterior part of the fissure between its upper and lower lobe was congenitally incomplete. The lower lobe of the right lung was hypostatically congested, and a considerable portion, especially towards its base, were the seat of bronchial pneumonia. The bronchial tubes containing a considerable quantity of stringy mucopus. Their surface was reddened by catarrhal bronchitis. The lung tissue was cedematous. (A foot note here says: A part at least of this condition was doubtless due to extravasation of the injection fluid used by the embalmer, but it contained no abscesses or infarctions.) On the left side, the lower lobe of the lung was bound behind to the costal plexra above to the upper lobe and below the diaphragm by pretty firm pleuritic adhesions. The left lung weighed twenty-seven ounces. The condition of its bronchial tubes and of the lung tissue was very nearly the same as the right side, the chief difference being that the area of the broncho pneumonia in the lower lobe was much less extensive in the left lung than in the right. In the lateral part of the lower lobe of the left lung, and about an inch from its pleural surface there was a group of four minute of gray of hepialization, each about an eighth of an inch in diameter. There were no infarctions and no abscesses in any part of the lung tissues. The surgeons assisting at the autopsy were unanimously of opinion that on reviewing the history of the case in connection with the autopsy, it is quite evident that the different suppurating surfaces, and especially the fractured, spongy tissue of the vertebrae, furnish sufficient explanation of the septic condition which existed during life. About an hour after the post mortem examination was completed, the physicians named at the commencement of this assembled for further consultation in an adjoining cottage. A brief outline of the results of the post mortem examination was drawn up, signed by all the physicians, and handed to Private Secretary Stanley Brown, who was requested to furnish copies to the newspaper press.

Signed, Bliss, Barnes, Woodward, Reyburn, Lamb, as above.

The report contains paragraphs detailing the observations made at Washington on the pathological specimens preserved for that purpose. The names of Drs. F. H. Hamilton, D. H. Agnew and A. H. Smith were not appended to it. It has, however, been submitted to them, and they have given their assent to the other portions of the report.

ATLANTA, 3. — The programme for the opening day's ceremony of the international Cotton Exposition is just out. There is an elaborate programme; Gov. A. H. Colquitt, President, will receive the buildings and grounds on behalf of the Exposition, Hon. Z. B. Vance, of North Carolina, will welcome the guests to the south, and Hon. D. W. Voorhees and others of national fame will deliver addresses, etc.

DENVER, 3. — The *Republican's* Pitkin special says: Several citizens were lately robbed and badly beaten. The robbers were Charles Briggs, proprietor of a dance hall, and his associates. To-day, after warning

the inmates, they set fire to the hall. Briggs fired into the crowd without effect. An unknown party returned the fire, fatally wounding him.

CLEVELAND, 3. — The matter of the final interment of the late President Garfield, having been agitated by some people in his old district, Dr. Robinson has talked with the widow, Mrs. Garfield, who said, if the trustees had not offered the lot, she should have purchased one in Lake View Cemetery, as she believed, if alive, the late President would so have directed. She thought it his wish to be buried there. She added, that the question of burial was no longer open, and will not be opened.

The Garfield Monument Commission thanks Longstreet, and through him thousands of Southern people, for the expressions of sympathy, and suggests that at the cotton exposition at Atlanta and at the exchanges in the South, contributions be raised for the monument.

CINCINNATI, 3. — To-day was made Garfield Memorial Day. All the public schools of the city were closed. The pupils and teachers draped and adorned the school rooms. The pupils wore mourning badges, and the exercises consisted of recitations of extracts from Garfield's speeches or of poems relating to him, and a brief address by visitors. The exercises were very impressive, often bringing tears to the eyes of all. Rev. Isaac Everett, who preached Garfield's funeral sermon, made a brief address at the Woodward High School, and Hon. Benj. Butterworth spoke at the Mount Auburn School.

PHILADELPHIA, 3. — John Maginnes shot his wife in the breast and killed his mother-in-law, who was pursuing him.

NEPHRETICUM!

THIS GREAT KIDNEY AND BLADDER TONIC

SUPPLIES A WANT LONG felt by a certain class of sufferers, and has a high rank among remedial agents. It is a specific in the cure of all Kidney, Bladder and derangement of the Urinary Organs, Irritation of the neck of the Bladder, a burning sensation, retention of the Urine and Brick Dust Deposit, tendency to Gravel always coupled with pain in the back, are sure indications of Dropsy, Diabetes and Bright's Disease of the Kidneys. AYER'S CHERRY PECTORAL,

For Diseases of the Throat and Lungs, such as Coughs, Colds, Whooping Cough, Bronchitis, Asthma and Consumption.

The few compositions which have won the confidence of mankind and become household words, among not only one but many nations, must have extraordinary virtues. Perhaps no one ever secured so wide a reputation, or maintained it so long, as AYER'S CHERRY PECTORAL.

It has been known to the public about forty years, by a long continued series of marvelous cures, that have won for it a confidence in its virtues, never equaled by any other medicine. It still makes the most effectual cures of Coughs, Colds, Consumption, that can be made by medical skill. Indeed, the CHERRY PECTORAL has really robbed these dangerous diseases of their terrors to a great extent, and given a feeling of immunity from their painful effects, that is well founded, if the remedy be taken in season. Every family should have it in their closet for the ready and prompt relief of its members. Sickness, suffering, and even life is saved by this timely defence. The prudent should not neglect it, and the wise will not. Keep it by you for the protection it affords by its early use in sudden attacks.
