

MINING, BUSINESS AND STOCKS

BUSINESS BRISK ON THE EXCHANGE.

The Forenoon Sales Footed up To More Than Twenty-two Thousand Dollars.

PARK CITY'S MOVE UPWARD.

Little Bell and Daily Judge Amongst The List—May Day Recovers Some—Closing Quotations.

The week began with the mining stock market in good tone and the record of Secretary Shorten shows sales aggregating 28,690 shares, of the market value of \$22,450. The new Nevada stocks did not participate to any great extent, the only ones being Belmont, which was sold at \$1.25 and a few weeks ago, sold at \$1.25 and some of the talent are predicting that it will go to \$1.50 or better. Daily Judge seems to have recovered from the slump of last week and is again on the up-grade. The stock sold at \$1.25 both on the regular and open boards. The shipments of last week were up to the average and the records show that the heaviest tonnage sent out of the camp came from this property. Columbus Consolidated moved upward, closing on a sale at \$2.25. May Day was the most attractive of the Tintic stocks called, and is in a fair way to recover from last week's losses. Beck Tunnel was supplied at \$1.15 while Ohio Copper was in but little demand, 40 cents being the best price that could be obtained for it.

The closing quotations and sales were:

DAILY JUDGE MILL.

Park City Plant Doing Splendid Work—Ontario Drain Tunnel.

A Park City Record reporter visited the Daily Judge mill Monday evening and found it pounding away perfectly. Under the direction of Night Foreman "Bugs" in the mill's earnings. The mill run this week for the end-of-the-month cleanup, and as a result already big shipments are still further increased. There are still several hundred tons of ore which accumulated during the mill's period of idleness to be treated yet, though the production of the mine, without any attempt being made to break any records, is far beyond that required to keep the mill running constantly. The concentrates being turned out are still the same high grade as at the beginning, and the zinc product now being saved, cuts no little figure in the mill's earnings. The management is now experimenting with one of the Wall style jigs, something new in the way of equipment at the mill, and if they prove entirely successful, several more will be placed in the mill, is producing wonderfully, and as yet no effort has been made to take a big tonnage of ore from the workings. The immense ore bodies on the 1500 level, having so far been passed by, awaiting the further development of the mine.

Though but little is heard from the Ontario drain tunnel, work is going steadily on there and considering the many difficulties to be overcome, good progress is being made. There is little change in the volume of water coming from the tunnel, it being about equal to what it was when the mine was in the mine. When the next effort to tap the pent-up water will be made, depends almost entirely upon circumstances, though it is thought that the water, when it does come, will be entirely successful and the great waterway will again be opened. It is to be hoped that such will indeed be the case and that it will not be far in the future. The blocking up of the camp's great drain has, and is still, making a great difference in the development of many of the camp's prospects and producers. The Daily West cannot sink an account of the water, neither can the American Flag, and in others really necessary and important work cannot be accomplished.

Wm. Whitehill, of the Wildflower group of claims, owned by a stock company of this city, will commence work at the property in the near future. Some work was done last year and the showing already made is encouraging to a great extent.

The latest reports are the effect that the Silver King sale had fallen through. No information concerning it has been given out for publication, but it is understood that the filing of the \$800,000 suit against the King by Jas. McGregor is responsible for the hitch in the transaction. The bad roads are a source of some annoyance to the operations in the Thayne canyon section of country, and as soon as they become passable renewed activity will mark the work being carried on in the many promising properties there. The California Comstock proposition will be in line for work by this time also, and the Jupiter, Odin and Silver Bell, are a trio of hardy youngsters which will also be vigorously heard from during the summer.

The new compressor plant at the Odin is doing the business, and the work has now reached that point where the compressor is expected to lodge in the crosscut tunnel is expected at any time. The development work has naturally progressed much more rapidly since the installation of the power drill and with each shift the showing grows more and more encouraging to the promoters of the company. Shipments will be made as soon as the roads will permit.

BAILEY SPRINGS STRIKE.

High Grade Silver Ore Being Taken Out For Shipment.

The Pioche Record sent a representative to make an investigation of the late strike made at Bailey Springs, a short distance out of Pioche, where he found five men busily engaged in taking out some high grade chloride of silver ore.

"South of the original discovery another strike has been made which shows greater values than found on the surface in the former place, the ore being of the same character."

"North of and on the belt some 200 feet distant still another strike has been made, which in appearance seems just as important as any of the others. This is about all the prospecting which has been done in the entire district and the extent of high values consequently can only be contemplated."

"The district, which at present has no name, appears to be about two miles in width, and six miles in length in a series of rolling hills, and is crossing in a north and south and east and west direction by large and in some instances extremely large quartz ledges cropping boldly above the surrounding."

"These ledges, excepting the one mentioned above, seem never to have been prospected, and possibly no part of them ever assayed. The rock is exceedingly hard and of a peculiar dark or black and unattractive color, which perhaps accounts for the district having been overlooked up to this date."

"The formation is bedded Cambrian quartzite, slightly tilted to the south and west by an enormous granite belt on the north for a distance of six miles, thus marking distinctly the mineral district. In the opinion of the writer every indication is favorable to a permanent camp and the values being uncovered almost at a stroke are sensational in the extreme. Little attention has been given the new camp by the local public until recently and only a few prospecting outfits are as yet there."

"Should these discoveries have occurred anywhere else on the globe except in the vicinity of Pioche, resident inhabitants would be breaking their necks to get there, for it is a pity some of them are not doing this."

CANNON BROS. BROKERS.

OUT IN THE BUSY CAMP OF TINTIC.

The Godiva's New 150-Ton Milling Plant is Doing Nicely.

NORTH TINTIC DEVELOPMENTS

Showing at Scranton Property—Dragon Iron Production—The Week's Shipments.

Special Correspondence.

Eureka May 7.—The new concentrating plant for the Godiva mine has been finished. A trial of the machinery proved very satisfactory. The plant will handle 150 tons of ore daily, with three shifts working. The machinery is operated by two 50-horsepower motors one of which runs the crusher, roller, screen, line elevator, two jigs, dewatering screen and plunger feed for rolls, while the other motor furnishes power for the Huntington mill, two elevators, tables, two pumps and plunger feed for the Huntington. The ore passes from the bins to the crusher and are deposited in bins from which the rolls are fed. From the rolls it is hoisted on the elevator No. 1 to the trommel screen. The over-size from screen No. 1 returns to the rolls to be re-ground, while the under-size passes to No. 2 screen, the over-size of which feeds jig No. 1, and under-size jig No. 2. Tailings from the jigs pass through the dewatering screen, and are deposited in bins from which the Sherman centrifugal rolling mill is fed. After being re-ground in the roller mill it is carried by a bucket elevator and passed through a series of four tanks, one of which feeds a table. Six settling tanks take the overflow from the classified tanks to table No. 1, the tailings of which are returned by the elevator and pass through the system again, while the tailings from the other tables are carried by the elevator, and deposited in two settling tanks. The water from the mill carries the tailings away.

All indications point to the plant proving a great success. The Scranton Mining and Smelting company has applied for a patent to the Alexander and Wolf Consolidated mine located in North Tintic. The annual meeting of the McKinley Mining company, held at this place on last Monday, resulted in the election of the following officers for the ensuing year: President, W. D. Myers; vice president, Erick Levin; secretary, W. C. Dewar; treasurer, Mrs. Jennie Myers; directors, John Endlund, Erick Levin, W. D. Myers, James L. Williams and Charles W. Hurst; superintendent, Erick Levin. The reports of the officers showed the company to be in an excellent condition, and that the underground workings of the mine are in a splendid condition, being close to the ore bodies.

Drifting from the 1,000 foot level at the Snowflake mine is still progressing and the showing is very encouraging. The drift which was started south of the shaft has been run over 300 feet and it is reasonable to suppose from all indications that it will tap the ore bodies. Active operations are still being continued at the New Utah mine in West Tintic. A new boiler has been installed at the property and the outlook is very favorable for the stockholders. Development work on the 700-foot level at the Carissa mine is showing up some fine ore and the underground conditions are in excellent shape. The prospects for the future are very bright. Work has been commenced on the Farrago group of claims in North Tintic under the direction of Sec. D. C. Harrington. Sinking in the shaft, which is now down a distance of 65 feet, is in progress, and work will soon be commenced in the tunnel. A whim has been erected on the property, and development work will be pushed by the new company with vigor. Several other properties, neighbors of the Farrago, are being worked and the owners are very much pleased with the showings produced.

One of the most promising properties in Silver City is the Sunday mine, now under lease by Fred Knaus, Dr. Barville and George Jones of Robinson, who have 15 tons of good ore mined, showing good values in silver and copper.

The Dragon Iron mine at Silver City is now producing from 150 to 175 tons of ore every day and as soon as the roads are in good condition over 200 tons will be shipped daily. Twenty-four carloads of ore was sent out during the past month by the leasees. The regular force is at work and appearances the output this month will greatly exceed the above number of carloads.

Preparations are being made by the Yankee Cons. Mining company to erect a new building in the place of the one recently destroyed by fire, and install a compressor on the ground owned by the company at Homansville. A pipe line will be run from the new compressor to the mine. The reason for putting the compressor in at Homansville is the location is on the railroad and a good supply of water can be secured. The regular force is at work at the mine upon the tunnel level and levels above taking out the ore. A new blacksmith shop and other buildings will be erected on the property at once.

Wednesday the leasees at the Mammoth mine received their checks, and the regular employees will be paid off on the 26th of the month. The annual meeting of the Matilda Mining company will be held at this place on May 9.

Supt. Joseph H. Burrows of the Prairie Bell mine, located in West Tintic, was in Eureka Thursday and reports everything favorable at that property. The ground, which is owned by local people, under development work, is making a very creditable showing, and by extending the work in the tunnel, it is almost a sure shot ore will be encountered in the shaft above.

Chas. Brown, who was formerly shift boss at the Centennial Eureka mine, has here this week and secured the services of several miners, whom he took to Mackay, Idaho, to work on a lease at the White Knob mine.

Work is still progressing on the road leading to Godiva mountain and the mining companies using the road will pay the expense of putting the highway in good repair, so that next winter there will be no interference in the shipment of ores from that section to the railroads.

The annual meeting of the claim owners of North Tintic district will be held today for the purpose of erecting a recorder for the ensuing year.

The Selma Mining company, which owns property in North Tintic, has been active operations on its property, one shift is working under the direction of Supt. L. C. Peterson. The tunnel is in at present a distance of 300 feet.

W. B. Ellis has disposed of his lease in the Bullion Beck mine for \$200.

WASATCH COPPER.

Ogdenites Form a New Corporation—Who Officers Are.

Special Correspondence.

Ogden, May 7.—The Wasatch Copper company has filed its articles of incorporation with the county clerk. It is capitalized for 600,000 shares of the par value of \$1 each, of which \$82,500 shares have been subscribed for. D. S. Tracy, president; Lyman Skeen, Jr., vice president; Leo Harris, secretary and treasurer; Directors: D. S. Tracy, L. Skeen, Jr., N. J. Harris, P. P. Taylor, Caleb Perry, D. E. Pyper and Alex Taylor. N. J. Harris is attorney for the company.

BOOM ON AT KLONDYKE.

H. S. Joseph and Other Salt Lickers In on the Good Locations.

There is a boom on at Klondyke, a camp located between Tonopah and Goldfield. A message received from E. H. Mead, who is now at Goldfield, by Harry S. Joseph, contains the information that several hundred people have gone into the camp, that a town site has been laid out, and there is every reason to believe that a camp is going to be built up as substantially as some of the others that have preceded it.

During his recent trip to Nevada, Mr. Joseph closed a deal for the purchase of the Peabody-Stanford group of four claims for himself and associates, and plans to now well advance for the organization of a new company.

The new townsite is adjoining this property, upon which a vigorous campaign of development has already been inaugurated. The ore carries high values in silver, and samples now on exhibition at Mr. Joseph's offices in the McCormick building shows horn silver in very generous quantities. It started the boom and rush to Klondyke.

UNCLE SAM DIVIDEND.

The directors of the Uncle Sam Mining company are scheduled to meet this afternoon to post the usual monthly dividend of \$5,000. The company's books will close on the 13th and the date of distribution will be fixed for the 20th inst.

CONCENTRATES.

M. J. O'Meara is expected to arrive from Tonopah tomorrow.

D. P. Rohlfing is in Beaver county looking after mining interests.

Col. E. A. Wall is looking after mining interests in Bingham today.

The ore and bullion settlements for last week reached the total of \$55,500.

A. A. Jeffs expects to get away for Canada on a business trip this afternoon.

Manager Tony Jacobson of the Columbus Consolidated went out to Alta today.

Work is progressing rapidly on the

new line of the Rio Grande into Bingham canyon.

Lorin Morrison, manager of the Indian Queen mine in Beaver county, is up from the south.

The new gold camp recently discovered near Yerington, Nevada, has been named Gold Pitt.

Manager G. D. B. Turner of the West Quincy mine of Park City has gone to Los Angeles.

Harry Stonemetz, a prominent Boston broker, is expected to arrive from the east in a few days.

Manager R. H. Channing of the Utah Consolidated is expected to reach home from the east tomorrow.

Matt Dougherty, manager of the Carbonate Hill mine in Morgan county, returned to that property today.

James H. Hendrickson, manager of the Half Moon mine at Osceola, Nev., is in the city on a brief business trip.

John Dery and James Chipman of the Lower Mammoth directorate left for an inspection of that Tintic property this morning.

W. J. Craig left yesterday afternoon for Nevada. He went to examine into the merits of a proposition not far from Manhattan and Round mountain.

At a meeting of directors of the Wash Mining company held on Saturday afternoon, the resignation of William Hatfield was accepted, and J. Leonard Burch was chosen as his successor.

William B. Sprague has been appointed purchasing agent for the Utah plants of the American Smelting and Refining company, succeeding O. E. Carey, resigned.

President W. G. Sharp of the United States Smelting, Refining & Mining company is making an inspection of the Mammoth mine and smelter in Shasta county, California.

John J. Mullin, prominently identified with mining in several of Nevada's camps, is in the city on his way east on a brief business trip. Mr. Mullin has secured a foot-hold in the Fairview district.

Local shareholders of the Little Bell were advised last Saturday that the fissure has been counteracted on the 300 level and that there has been exposed at this point a body of ore nine feet in width.

Auguste Mathez, one of the engineers in the employ of Samuel Levesque, accompanied by Ed Loose of Provo, will leave for the Big Indian mine in the La Sal mining region this afternoon.

Charles M. MacNeill, president of the Utah Copper company, arrived from Denver this afternoon and will remain several days looking after matters pertaining to the affairs of the big corporation over which he presides.

Shipments have been resumed from the Eureka-Ophir property in Dry canyon, Tooele county. Late developments at this property indicate that it is going to be quite a generous contributor to the local ore market during the year.

Don Maguire is down from Ogden today and reports that the season's campaign has begun in earnest in the Sierra Madre mining district. The show is now pretty well off the mountains in the vicinity of the principal mines.

H. W. Coffin of Duluth, who is ex-

tensively interested in the Potot lead and zinc mine at Good Springs, Nev., arrived in the city yesterday afternoon on his way to the Nevada camp. He left this afternoon on the Los Angeles limited. Advances received today indicate that there are 10 cars of lead and zinc ores in transit from the mine.
