

## NEWS OF THE WEST.

Great Troubles Fighting Mosquitos Around Durango, Colo.

## RESERVOIR UNDER CONSTRUCTION.

Beds of Mural Soap at Somers, Wyo.—A Child Artificer.

Late arrivals indicate the Navajo Indians' whole tribe will soon move to the mountains of Coconino.

P. M. Farnham, one of the best known citizens of southern Colorado has just left Denver, from foursquare about the time he was by a scuffle with his attorney.

A large reservoir is being constructed near Estes Park. When completed it will contain enough water to irrigate about 10,000 acres of land in the valley.

The Glenwood (Wyo.) Telegraph says: A large crowd of cattle pass through here daily, some with them having a thousand cattle each, and others a dozen or more. They are bound for Cheyenne, where they will be sold.

A Denver syndicate has several hundred acres of fine grass around near Horace Head, but committed to wire them out as a large scale, says the Caldwell Union, Denver. They are preparing a system of irrigation and expect improved wagons of newing the soil.

The last batch of mineral soap in the vicinity of Nessie, Wyo., it is said, have been packed up and large quantities of it are being shipped to eastern points. It largely used as the finishing soap for plates, taking the place of a very satisfactory mixture of soap which has always been used for that purpose.

The only son of Mr. and Mrs. David A. McMillan, aged 21 years, was drowned at Wyoming Center in the Des Moines River, on the route of A. E. Heaton, four miles north of Gunnison, Colo. The little lad was trying to save his mother in the drift when he fell in and an hour later his body was found, lifeless.

What becomes of many portions of Navajo property is not yet determined. The field is reported to be less than the average, but the quality is excellent. The straw is much lighter than usual, but the strayed growth has not extended to the head except in those fields approaching the sandy sections of the state, where the crop has been burnt.

It has been a good many years since the cattle of the Navajos have fed so long as they do at this writing, says the Rocky Mountain Journal. Stock in nearly every section of the state wintered well, and the range is everywhere green, and it does not seem that there is anything that anything can occur to prevent a fine crop of beef and fairly good prices.

A man interested in seven claims in the Kennedy mining district, who recently arrived in Denver, says the new mining camp is in place, but a man without money, for there is no demand for workmen, on account of the lack of railroads, and the distance of the claims from the market. There are a number of men there now, who consider themselves lucky when able to "raise" one mule a day.—*Rocky Mountain Journal*.

A special dispatch in the Denver News says that the telegraph wires left behind a host of pests in the shape of cockroaches, ants, and grasshoppers, with which the outfitting of the mail stage coach task. In many cases flies have been found in the evening in order to protect stock while was almost wild with pain from the bites. Men in some of the new camps complained of severe malnutrition, and that they had to subsist on the tips of the swarming myriads. No one in this section has ever seen the like since this section of the valley was settled.

The Grand Junction (Colo.) Standard advocates the construction of good wagon roads from that city toward the northward, by which direct communication and general transportation will be had with the mining districts along White River in Colorado, and with Yampa, a thriving town in eastern Utah, which is surrounded by a prairieland agricultural and fruit growing country. The issue is true, says the Standard, that the Colorado and other territory lies to the southeast, where people would gladly make Grand Junction their trading point if good roads were built for that accommodation.

The machinery, that was shipped here for the larger beer brewery by H. G. and Robert Santachi, who had entered into a supposed partnership with Casper Becker at the Western Dry Goods Store, is now in the hands of George G. Gandy, who is likely to be worked by the law for brewing trouble in place of beer awhile. Since the arrival of the machinery there has been some misunderstanding between the partners. Becker holds the majority interest, but is willing to let the remainder of about \$1,000, the partners' owing under say one-half of their attorney, and a replica suit was immediately commenced by Becker, who was set to action next Thursday, and is expected to settle the question.

*Geographical.*

He was a very simple and foolish old Indian boy, although she was only a girl, and she was a cousin of New York. A sympathetic coming on her part gave her an opportunity to have a brief conversation with her.

"I presume," said she, "that while you grow up you will marry, and little girls do."

"Yes," she replied, "but I am a child."

"Indeed! That will be no disappointment."

"Possibly it may be a misfortune, and to the young woman, but not to me. I fancy I am the last link in her chain quite possibly, but I don't know."
