Boxing the Ears.

Boxing the ears is an inexcusable brutality; many a child has been made deaf for life by it, because the "drum" of the ear is a membrane, as thin as paper, stretching like a curtain just inside the external entrance of the ear. There is nothing but air just behind it, and any violent concussion is liable to rend it in two, and the "hearing is destroyed forever, because the sense of hearing is caused by the vibrations of this drum or "tympanum." Picking the ears is a most mischievous practice. In attempting to do this with hard substances, an unlucky motion has many a time pierced the India-rubber life preserver; nothing harder or sharper than the end of the little finger, with the nail pared, ought ever to be introduced into the ear, unless by a physician; persons are often seen endeavoring to remove the "wax" of the ear with the head of a pin; this ought never to be done; first, because it not only endangers the rupture of the ear by being pushed too far in, but if not pushed so far, it may grate against the drum, excite inflammation and an ulcer, which will finally eat all the parts away, especially if of a scrofulous constitution; second, hard substances have slipped in, and caused the necessity of painful, dangerous and expensive operations to fish or cut out; third, the wax is manufactured by nature to guard the entrance from dust, insects, and unmodified cold air, and when it has subserved its purpose it becomes dry, scaly, light, and in this condition is easily pushed outside by new formations of wax within.

Occasionally wax may harden and interfere with the hearing; but when this is the case it is the part of wisdom to consult a physician and let him decide what is the matter and what the remedy; if one cannot be had, the only safe plan is to let fall into the ear three or four drops of tepid water, night and morning; the saliva is better still, it is softer and more penetrating—but glycerine is far preferable to either, it is one of the best, blandest fluids in nature and very rapidly penetrates the hardest wax, cools the parts, and restores them to a healthful condition. If, in a week, there is not a decided improvement in the hearing, medical advice ought to be had at once, as next to the eye, the ear is the most delicate organ of the body.

Sunstroke.

The usual exciting cause of sunstroke is exposure to the direct rays of the sun, generally in connection with great exhaustion of the bodily powers. It sometimes occurs without the direct agency of the sun. The principal pre-disposing cause is the use of alcoholic stimulants. Enfeebled, poorly fed, overworked, and irritable persons are also somewhat liable to it. I never yet have known of a single instance of sunstroke occurring to a person who neither used alcoholic stimulants or tobacco, and who was regular and temperate in his habits. As special precautions during hot weather, the entire body, including the head, should be bathed daily in cool or cold water; great care should be taken not to wear anything around the neck so as to impede the circulation in the least, and the covering of the head should be light and porous, so that the air can circulate freely through it. Those who obey the laws of health, need have no fear of sunstroke. The treatment of sunstroke should vary somewhat according to the condition of the patient. In all cases he should be removed to a cool and shady place, and the clothing stripped from his body. If the head is hot, cold water or ice should be kept constantly applied to the head and neck, and hot water to the hands and feet. If the skin is cool and moist, the entire surface of the body should be vigorously and continuously rubbed until reaction takes place. If the skin is hot and dry, then the whole body should be rubbed with cloths wet in the coldest water that can be obtained, or with pieces of ice, until recovery takes place, as it almost invariably will under this treatment. Bleeding in such cases, as practised by many, is almost certain death.—Herald of Health.

THE EAR-ACHE.—Generally heat is the best remedy. Apply a warm poultice or warm oil to the ear. Rub the back of the ear with warm lanolin. In case of a foetid discharge, carefully syringe the ear with warm milk and water. In all cases keep the ear thoroughly cleansed. Relief is often given by rubbing the back of the ear with a little hartshorn and water.
