

MINING, BUSINESS AND STOCKS

MORE ABOUT CAMP OF GREENWATER

Disclosures Continue to Prove Source of Astonishment to Mining Men.

LIMIT OF ZONE IS UNKNOWN.

Camp is Growing in Proportion, With New Arrivals in Evidence Daily—Real Estate Booming.

All of the big properties of the Greenwater district now being operated are showing up well, says the Greenwater Times of recent date. There is not one among them that does not improve with depth. That can be vividly said of the Greenwater and Death Valley claims, on which there are three shafts going down on as many claims.

There is hardly any use in specifically mentioning many of these copper empires, for we would only repeat what has so often been said about them in the many publications of the country. We have not the space, and were we to mention one, we in justice would be expected to do the same by all.

GROUND STAKED FOR MILES.

The excitement in copper trends down into the Death Valley, and it is said by parties who have been down there during the week that ground has been staked away out on to the salt marshes on that barren and desolate plateau. From Death Valley and between it and the Furnace Creek company's ground there are worlds of copper, but in almost inaccessible places. The immensity of the orebodies is far beyond the comprehension of the mind. Large and responsible mining corporations have been organized to operate them, but we believe that in time these enormous deposits will be eventually mined by a tunnel from the valley cutting the ledges all the way from a few feet to over a mile in depth.

PRESENTS WONDERFUL SHOWINGS.

A full force of men is working in the property of the Furnace Creek property, and it is reported they are drifting on the lead both ways. The same company has subsidiary operations on claims adjoining, and it can be said of them that they present wonderful showings. "Jim Casey" is at the bar on these properties, while during the absence of Gen. Mr. Harvey the management of the whole property rests with Patsy Clark, Jr., who is acknowledged as a young man possessing ability and tact in managing large mining enterprises.

Harry Tague is the manager of the Furnace Creek Extension property, and the claims adjacent to that of the parent. There are many large ledges coursing through the properties and a force of men is employed developing them in a mining manner. Several deposits of rich ore have been found, but work of development continues to determine their extent and to uncover others.

MOST PROMISING IN WORLD.

There is not a more promising mining district in the world today than the Greenwater is. There never was the showing in the world in any country that we have here.

We can give but little information, situated where we are, but there is a report of wide circulation that some of the larger mines of the district are to be merged into one corporation, and the two most frequently mentioned are the Greenwater-Death Valley, Furnace Creek properties and others. It is said that this immense consolidation has been consummated, and that the parties and conditions of the number merged we have been unable to ascertain at this writing.

There has been terrific bounds in all values in camp during the past week. Mining is of course the leading feature and there have been many exchanges of valuable property at handsome figures, and many sales of prospects at all kinds of figures. Every mine, location or prospect commands a price and there is no need of anybody going about without a cent in their pockets when there is a possibility of a piece of ground being vacant within a reasonable distance of this town.

EVERYBODY BUSY.

No one is idle; everybody is busy. They are locating, locating ground that a week ago any prospector in the land would throw his nose up in the air at. Different at this time, for any kind of ground and the way the value trend and run the values remaining with them, there is no reason why all ground is valuable, only for the reason the showing is perhaps a little better in one claim than it is in another is why one commands a better price than the other.

Real estate is on the ascendancy. It continues to climb and Dr. Ford, the manager of the townsite company, has all that he can do to keep pace with the climbing market. Lots that were sold a week ago for as low as \$300 are away up in the high figures, and still going. Residence lots selling for the low figure of \$250 are correspondingly on the rise, an all in a question of what figure they will attain when they reach the peak.

GOLD BUTTE ELECTION.

A. Richter and J. F. Harding Chosen Directors of Company.

At the annual meeting of shareholders of the Nevada Gold Butte Mines company, operating at Gold Butte, Nev., which was held in this city last evening, A. Richter and J. F. Harding were elected members of the board of directors to succeed W. H. Jones and C. A. Verity, who contemplate going to California in the near future to spend the winter. The remainder of the board consists of W. C. Higgins, A. R. Greeson, Charles F. Porter, L. A. Copeland and J. B. Graham, who were re-elected.

The board later organized with L. A. Copeland, president; W. C. Higgins, vice president; A. B. Greeson, secretary and treasurer; and Judge E. V. Higgins, local adviser.

The annual report to shareholders will be mailed as soon as it is put into printed form.

INSTALLING DONKEY ENGINE.

Victor Con. Making Good Progress in Developing Mine.

Supt. Joseph Treloar of the Victor Consolidated informs the Eureka Reporter that he now has a force of men working on a new shaft for the donkey engine which will be installed upon the 500 foot level. It is the intention of the company to put the shaft down 300 feet deeper. The shaft is now down 500 feet, and will take it to the 800 level. Mr. Treloar says that there is a winze down 200 feet below the 500 foot level and another winze in another part of the mine was also down to nearly the same depth when work was suspended some time ago. There is a 3 foot body of ore carrying 15 per cent copper in the bottom of the first winze and after dropping the main shaft down 100 feet below the deepest workings, Supt. Treloar will cross cut to tap the vein. The Victor ground is undoubtedly traversed by the Carlin ore bodies and the carrying out of the development work which has been outlined will no doubt bring the property to the surface as it never has before. Mr. Treloar has ordered an 80 horse power boiler, which should be delivered at the mine the latter part of this month or the early part of December and after this has been installed he will be able to do considerable other work in addition to sinking the shaft. There is some nice ore at different points in the mine which can be taken out and the shipping of this will bring in some money so that the shareholders will not be assessed. But one shift is now at work at the Victor but another shift will be put on within the next few days.

LITTLE SERIOUS TROUBLE.

D. B. Eldred of Boise Tells About Rush To Reservation.

D. B. Eldred, of Boise City, Idaho, left for the Walker reservation Friday morning, where he will do assessment work on claims staked out by him during the rush last week. Mr. Eldred was in company with Mr. Farnam, of Goldfield.

Mr. Eldred exhibited several assay sheets in Tonopah from stones picked up on his claim, four specimens of which proved a total valuation of \$7,500 in gold. The assay sheet from Mr. Farnam's claim showed a valuation of \$8.68 in gold and \$43.65 in silver, a total of \$52.33. These claims, according to Mr. Eldred, are located about two and a half miles from Walker station. According to Mr. Eldred there was not the sign of violence as far as he could see in the rush. "The men were polite," he related. "Mr. Eldred, and shared their provisions. Some were unfortunate in running short and those with me had plenty as I was plentifully supplied for several weeks. There were disputes but they were all settled amicably. I know of one case where a locator came upon a man about 10 miles from the border who said that he had established his claim 20 minutes after the reservation opened. Immediately the new comer called the bluff, for he knew that the other fellow could not traverse the 10 miles in 20 minutes and the new-comer proved the other fellow a 'sooner' and they settled the affair by establishing equal rights between themselves. All the talk of lawlessness and a shortage of coffins is nonsense."

TO ENTER PARK CITY FIELD.

Iowa Copper Co. to be Incorporated With 500,000 Shares.

In the very near future articles of incorporation will be filed for the Iowa Copper Mining company of Park City, the company owns valuable property in the near vicinity of the Scottish Chief. The claims show a 10-foot ledge carrying gold and silver values and going high in copper. The capital stock will be 500,000 shares, half of which will be used for treasury purposes. L. R. Perry of Forest City, Iowa, secretary and treasurer of the Mount Mason property, will be president of the new incorporation, and A. M. Spooner, of Park City, secretary and treasurer. Some little work has been done on the ground already by Mr. Spooner and others in investigating its merits, and results were most satisfactory.

We Sell Real Estate

As well as Commercial Stocks. Just now we make a feature of

Building Lots in Forest Dale.

We do not recommend these lots as a speculative investment, but we have choice locations for home-builders in nearly every part of this desirable suburb.

A few lots on Fifth East (on continuation of the East Boulevard); some on Driggs' Street; a few fine building sites on Calder's Park car line (7th East Street); and enough lots for about half a dozen homes with east frontage on 6th East Street, a little way north of the fine grounds of the Country Club. We can suit you if you want a home; and price, terms and treatment you will find to your liking. If you are a good neighbor we want you. If not, the price you might offer would not be an inducement to sell to you.

WORK ON SMELTER WILL BE PUSHED

Construction of Ely's Great Plant Now Employing Large Force.

AS COMPARED WITH WASHOE.

Figures Which Show Relative Importance of Two Plants—Ely Smelter To Cost the Most.

There is great activity at the smelter site at McGill's, where Ely's great plant now in process of construction will be located. One hundred and fifty men are on the payroll and buildings are springing up and the excavation for the plant is being rushed. The company is installing a water pipe line from Duck Creek to the site and will in that way convey water into every building of the company and into the buildings of the commissary. There will also be installed an 840 light electric plant. Mr. Hudgins, the commissary contractor at the site, is erecting buildings, machinery in every particular, as fast as lumber can be secured, and at present is feeding the new town and everyone in it with satisfaction to all concerned.

Some idea of what Ely's new smelter will be can be gained by the comparison with the great Washoe smelter, which was built at a cost of \$9,500,000. The Ely smelter will cost \$10,000,000, and will be larger and arranged according to the most advanced ideas of the science of smelting. The Washoe plant employs 2,327 men in the works and 276 in auxiliary industries. Ely's smelter, because of its greater size, will employ more men.

Last year the Washoe smelter produced 104 per cent of the world's supply of copper and 20 per cent of the production of the United States. The smelter receives an average of 8,000 tons of ore a day, or about 2,000 tons less than the Ely smelter will handle. This ore comes from the mines of the Anaconda, Parrot, Trenton, Washoe, Red Metals and Pittsburgh & Montana, and as about 80 per cent of this ore carries less than 6 per cent copper, it is sent to the concentrator.

In less than three and a half years, the smelter has treated ore valued at \$104,216,083. This will give some hint of what the Ely smelter will do.

During the three and a half years, the total cost of operating the smelter was \$28,700,386, of which \$7,067,324 was sent for labor; \$4,293,455 for coal; \$4,012,005 for coke; \$49,047 for lime rock used in smelting; \$3,161,029 for machinery; \$3,896 for lumber; and \$1,480,813 for railroad rates.

The Washoe smelter is about 20 miles from Butte and a flourishing city of 15,000 inhabitants, Anaconda, has grown up around it.

As the Ely smelter will disburse as much or more, it will support a population as large or larger.

CONCENTRATES.

J. A. Young, a Salt Lake mining man, paid this place a visit this week on mining business and to look over the country. He is much impressed with the possibilities that exist here in all lines of business—Yerlington Times.

Joe Enzensperger, of Berkeley, Cal., formerly of Salt Lake, spent a few days in town last week and this. He had some men staked out for him Monday on the reservation, and was in himself and secured some promising claims—Yerlington Times.

Willard F. Snyder is expected to arrive in the city tonight from New York. W. C. Clays with interest in the Blackhawk mining district, yesterday received word of a new strike on the Tiger group of claims adjoining the Lucky Boy. Assays of ore show 35 per cent copper, 12 ounces of silver and \$16.50 in gold.

The Ely Investment company promoted the sale of the Emma mine in Robinson canyon for \$10,000, says the White Pine News of Ely, Nevada. The mine was formerly owned by the Thomas Wren estate, Sol Hill, the Sader estate, and Judge A. E. Cheney. Every foot of mining ground in the district is being eagerly bought up. Ely has just started to grow.

The storm of the last few days has interfered somewhat with the setting up of the new machinery at the Little Chief mine. The body is now being put in place and the gallow-frame will be raised today or tomorrow. Supt. Joseph Hannin says that a couple of weeks' more time will be required to get everything in proper shape so that work can be resumed underground.

C. E. Allen, managing director for the United States Mining company, came out from Salt Lake yesterday for the purpose of looking over affairs at the Centennial Eureka mine. The company is now at work putting up the new steel building which is to replace the structure which now houses the machinery at this mine—Eureka Reporter.

GO RIGHT AT IT

Friends and Neighbors in Salt Lake City Will Show You How.

Get at the root of the trouble.

Rubbing an aching back may relieve it.

But it won't cure it.

You must reach the root of it—the kidneys.

Doan's Kidney Pills go right at it: Reach the cause; relieve the pain.

They cure, too, so Salt Lake City people say.

K. Searies, of 450 West Second South Street, Salt Lake City, Utah, says: "I cannot praise Doan's Kidney Pills too highly. I procured this remedy at the F. J. Hill Drug Co.'s store and used it for a kidney trouble which had brought me into a run down condition. I did not expect such quick relief, but by the time I had taken two boxes there was a big improvement. The kidney secretions were regular again and every pain or ache had been removed. I certainly owe Doan's Kidney Pills a strong endorsement."

For sale by all dealers. Price 50 cents.

Forster-Milburn Co., Buffalo, New York, sole agents for the United States.

HUSLER'S FLOUR!

That's why it makes such good bread.

Light Mining company of this city were filed with the county clerk today. The capital stock of the company is \$500,000, divided into shares of the par value of \$1 each. F. Khans is president; A. Callaghan, vice president; O. B. Gefek, secretary and treasurer; George E. Brown, manager. The company owns the Buckhorn and Silver King groups of claims located in Douglas county, Nev.

EN ROUTE TO CANANEA.

W. C. Greene of Greene Consolidated Makes Brief Stop in City.

Col. W. P. Greene of Greene Consolidated passed through the city yesterday

on his private car enroute to the coast. Col. Greene, in company with one or two of his directors, is making a tour of the country, including stops at the principal copper camps. He states that while he came here from Butte he made no purchases of Butte copper property and does not intend to interest himself in any new ventures.

The Greene Consolidated mines at Cananea, Mexico, are now handling 2,500 tons of ore daily, and as soon as the colored gets there a further force of men will be put on sufficient to double this tonnage.

The company has a total capitalization of \$10,000, and is one of the largest and best known copper companies in North America.

EXPECT TO CUT ORE BODY.

In a letter received from the superintendent of the Gold Butte Mines company with properties in the Gold Butte mining district, the officials of the company were yesterday notified that the face of the tunnel which is now in 266 feet is in highly mineralized rock and contact with the ore body is expected any time.

It is believed that the tunnel is approaching what is known as the Gold Butte vein, rock from the surface of which assays \$12 to \$50 per ton, with a streak running \$500 to \$1,000 in free gold. There is every indication that the vein of the property grows richer with depth, and the development of the property is therefore watched with much interest.

OLD SORES OFTEN LEAD TO CANCER

Whenever a sore or ulcer does not heal and shows signs of becoming chronic, it should arouse suspicion, because many of these places lead to cancer. It may appear as an ordinary sore at first, and is given treatment as such, with some simple salve, wash or plaster, with the hope that the place will heal, but the real seat of the trouble is in the blood and cannot be reached by external remedies, and soon the sore will return. After awhile the deadly poison begins to eat into the surrounding flesh and the ulcer spreads rapidly, becoming more offensive and alarming until at last the sufferer finds he is afflicted with cancer. Cancerous ulcers often start from a boil, wart, mole or pimple, which has been bruised or roughly handled, showing that the taint is in the blood, perhaps inherited.

Another cause for non-healing ulcers and sores is the remains of some constitutional disease or the effects of a long spell of sickness. S. S. S. goes down to the very root of the trouble and cures so thoroughly that there is never any sign of the trouble in after years. As soon as the system gets under the influence of S. S. S. the place begins to improve, the discharge gradually grows less, the inflammation leaves, the flesh resumes its healthy color, and soon the sore is well, because every vestige of the cause has been removed from the blood. Book on sores and ulcers and medical advice without charge.
