WILL AGAIN PAY DIVIDENDS.

From Some Unexplained Cause the The Horn Silver Will Distribute One About July 1st.

STAR CON. IS WEAKENING. STRIKE IN THE SILVER HILL

Good Ore in the 200 Level - Bullion. Beck Strike-Swansen Storing Lead Ore.

It was learned today from reliable

sources that the Horn Sliver will hand out a dividend to its stockholders on July 1st. The amount will probably be 5 cents per share. Considerable pleasure is said to be felt by President Washington of New York in the mine's condition. A vast sum of money has been expended in development since the last dividend was paid about 18 months ago. The efforts of the management to add to the mine's ore resources are said to have met with a great deal of success. In discussing the matter today Manager P. T. Farnsworth said that the suuply of shipping ore can be increased any time. A great deal of development work is blocked out for the rest of the year, but unless lead drops below the present figure it is probable that this bonanza will distribute regular quarterly dividends, for awhile at least. In spite of its large bodies of copper ore the mine is said to depend largely at present on its lead ore for its revenues. The news that the old producer will re-enter the dividend column will be good news to not only the comparatively few stockhold. ers, but to mining men generally.

BIG MINING STRIKE.

Drivers and Car Runners Quit Work in a Pennsylvania Mine.

A Scranton, Pa., dispatch this afternoon says: The strike of the drivers and car runners which began in the Delaware & Hudson company's Marvin mine on Tuesday, spread today to the Leggett's Creek, the Dickson and the Von Storch mines of the same com-

The threat is made to carry the fight The threat is made to carry the light to every mine of the Delaware & Hud-son in the Lackawanna Valley. Twen-ty-five hundred westers are made idle thus far. The strike is over a cut of ten cents a day in the drivers' wages and eleven cents in the pay of the run-ners without notice. They now dewithout notice. ners without hotele, mand an increase of 10 cents a day over the old wages—drivers, \$1.25; runners, \$1.51. Fear is expressed that the trouble will spread to the Delaware, Lackawanna and Western miners, the men and boys on strike declaring the issue at the Marvin is only the beginning of a similar cut all through the

The Age of Aluminum.

The coming age will be the age of aluminum, said Nicola Tesla, the noted lectrician, recently. It is only seventy years since this wonderful metal was discovered by Woebler, and the aluminum industry, scarcely forty years old, commands already the attention of the entire world. Such rapid growth has not been recorded in the history of civ-ilization before. Not long ago aluminum was sold at the fanciful price of \$30 or \$40 per pound; today it can be had in any desired amounts for as many cents. What Is more, the time is not far off when this price too, will be considered fanciful, for great improvements are possible in the methods of its manufac-

The absolutely unavoidable consequence of the advance of the aluminum industry will be the annihilation of the copper industry. They cannot exist and prosper together, says the New York Mining News, and the latter is doomed beyond any hope of recovery. Even now it is cheaper to convey an electric current through aluminum wires than through copper wires; aluminum castings cost less, and in many domestic and other uses copper has no chance of successfully competing. A further ma-terial reduction of the price of alum-inum cannot but be fatal to copper. But the progress of the former will not go on unchecked, for, as it ever happens in such cases, the large industries will absorb the smaller ones; the giant cop-per interests will control the pigmy aluminum interests, and the slow-pac ing copper will reduce the lively gait of aluminum. This will only delay, not avoid, the impending catestrophe.

SILVER HILL STRIKE.

A 5 - Foot Body of Ore Found in a Drift Off the 200 Level.

C. V. Wheeler of the South Swansea ame in from Silver City last evening with news of an important strike in the Over Hill Mining company's property now leased by Messrs. Leyshon and Short. The property lies between the Silver Park and Rabbitts Foot proper-ties, and has been worked by the leasers for several months past. When nearing the 200 level the leasers are said to have found very encouraging conditions. The shaft followed the vein down from the surface, but at the above mentioned lepth it was found the vein had widbtained, however, excepting in patches f ore which assayed very well, 00 level a drift was started on the vein nd it is said that a five-foot body of good ore was broken into about nine feet away from the shaft. The ore is values in copper, silver and lead.

STORING LEAD ORES.

Swansea is Not Handling Its High

Grade Ore on the Market. A returned visitor from Tintic re-A returned visitor from tinue re-ports the Swansea storing great quanti-ties of lead or in the stopes and drifts, in the mine. As is known, some of the Swansea ore runs high in lead. This is stored and that which carries only bout 12 to 15 per cent lead with the liver is being shipped. The large exas of iron in this dry ore, as it is ble smelting ore, notwithstanding the percentage in lead is low. The wisdom of this course is apparent. With a large curplus on hand the Swansea is under no necessity to market its lead until through the influences of the producers

organizations and perhaps other things the price of lead again begins to climb. A number of smaller producers than the Swansea are taking a similar course, and if this action is general in the West it appears that that of itself

gar annount an will slightly help to reduce the lead surplus during the present year.

MINING NOTES.

R. C. Lund is in the city from Fay, Nevada. The Swansea will pay its dividend of

The books of the Daly West close to-morrow on the month's dividend.

The Taylor-Brunton sampler reported 19 cars of ore from Tintic today. Tomorrow is the time set for the

first payment on the Dalton & Lark. Eleven cars of ore were on the market today from the Centennial Eureka, A small shipment of ore will shortly be on the market from the Columbia on Lion Hill

M. W. Taylor, the well known brok-er, was in Tintic today visiting several mining properties.

Eight cars of Concentrates were on the market today from Senator Clark's Ophir Hill mine.

C. V. Wheeler came up from the South Swansea last evening and reports the mine looking well.

Some diversity of opinion exists regarding the value of the May Day's two rich cars of ore. Newt. Dunyon, who is conducting

work on the Tiernan group in North Tintic, was in town today. About 160,000 shares were brought in by the company at the West Morning Glory delinquent sale yesterday after-

Superintendent Isaac Jennings of the

Grand Gulch copper mine in Mojave county, Arizona, has returned to the metropolis for a few days. R. H. Terhune has returned from Humboldt county, Nevada, where he went to look over some mining prop-

Everything is said to be inreadiness at the Northern Light mill, and W. Orr, the cyanide expert, is expected any day from Denver to start the mill up.

A Van Patten of Ogden has ordered an air-compressor and drills from the Salt Lake Hardware company for the Carbonate Gem mine in Morgan county. Times-Review: The assay office of the Dexter Gold Mining company is now in charge of Mr. William Mage-nau, who arrived Friday evening from

N. S. Johnson, L. V. Bean and two other zentlemen are in the city from Sioux Falls, S. D., for the purpose of inspecting the Stockton Gold Mining and Milling company's property in which they are interested.

R. E. Rex confirms the strike reported of the St. Joe in Bingham. Drifting is now going forward on the vein. The work is being pushed in the lower tunnel though when power is secured. will be in the near future, more progress will be made.

SCIENTIFIC MISCELLANY.

A cycle of het and cold summers coinciding with the decades, has been traced by Mr. A. B. MacDowall in the records of Greenwich observatory, Since 1841 the mean temperature for June, July and August has ranged between 57.4 degrees and 65.1 degrees, and it is found that the summers reaching or exceeding 63 degrees have been nearly 9, and that the summers of 60 de completely distributed in the years ending with 0 to 4. In other the earlier summers of decade have tended to be cool, and the later ones to be hot. The ten-dency has been followed as far back as 1810, but the records before 1841 are less trustworthy.

The world's manufacture of calcium carbide for acetylene gas is using elec-tricity stated by Prof. Borchers to be equivalent to 180,000 horse-power; that of the alkalles and the combinations of chlorine for bleaching, 56,000 horse-power; of aluminum, 27,000 horse-pow-er; of copper, 11,000; of carborundum, 1,700, and of gold 455. Electroplating is carried on by nearly 200 firms in Shef-field and over 100 in Birmingham. Electric smelting of iron has proven suc-cessful experimentally, and 60,000 horse-power from the river Aar has now been secured for manufacturing iron from the hematite of the Bernese Oberland. Lacking coal, the machinists of Switzerland have been compelled to import more than \$10,000,000 of Iron a year.

We can scarcely hope for new sources of energy to be discovered, savs Sir Wm. H. Preece, but there are some existing ones we have not touched yet. When the evil day arrives for our coal supplies to give out, we may perhaps be able by the ald of electricity to utilize the heat of the sun and the tides of the ocean. There is, however. a vast illimitable store of energy not only in the rotation of the earth upon its axis, but in the internal heat of this globe itself. As we descend the temperature gets higher and higher. It ought not to be difficult to reach such temperature that by thermo-electric appliances we might convert the lost energy of the earth's interior into some useful electric form.

The longest lightning conductor runs from the lower of the Munich meteorological station on the Zugspitz, the highest point in the German empire, nearly three and one-half miles to the Hottenthal, the nearest constant water.

It is pointed out that a small bronzegreen humming-bird of the island of St. Vincent has not been seen since West Indian hurricane of September, 1898, and it is asked whether the storm has completely exterminated this

This is a German method of making 'Shlo Liao," a famous cement used by the Chinese to unite gypsum, porcelain, marble, stones and stoneware: The ma-terials are 54 parts of slacked pow-dered lime, 6 parts of powdered alum, and 40 parts of fresh, well-strained blood; and these are stirred until a well-mixed mass of the consistency of somewhat stiff salve is obtained. When sufficiently thinned, this cement becomes a durable waterproof paint of varied uses. Two br three coats make cardboard covers as hard as wood, may be used for painting houses, and it gives barrels an oil-tight glaze.

It appears from an observation by It appears from an observation by Heise that even flameless explosives may set fire to gases in mines. A compression of 200 atmospheres would raise the temperature of air to 1,060 degrees C., and, as explosives in bore holes can exert a pressure of 6,000 to 8,000 atmospheres, the heat of compression would be guite sufficient to ignite inflammable gases in the neighborhood. A photograph described by Oscar Gutt-mann is held to confirm this theory. It shows a flash at the meeting point the explosive waves from two simultaneously fired safety cartridges, prov-ing that the air was so heated by compression as to become luminous.

In the kammatograph nearly 600 pictures are taken on a plate twelve inches in diameter, the turning of a handle causing a slow rotary and lateral motion, with the necessary stop for exposure at every fourteenth senond. The pictures, thus impressed in a spiral combine in an "animated photograph," when a positive plate is passed through the connect in from through the camera in front of a lan-

DRY WEATHER THE CAUSE.

Railroad Stocks Make a Poor Showing in Wall street-Live Stock Strong.

New York, June 8 .- Noon: Dealings were small at the opening of the stock market. The price changes were narrow and mixed. During the first hour American hoop, preferred, pressed steel car, preferred, and Northwest declined two points, while Consolidated gas and Lake Erle and Western advanced as much, Baltimore and Ohio and Missouri Pacific yielded over a point each before noon. Weakness spread through the railroad quarter, and especially in the western group. There was not much interest in the

specialties but they weakened in sym-pathy with the railroads. Tennessee oal and sugar lost nearly two points. Western railroad shares broke badly on fears that rate cutting would re-sult from the differneces over the division of traffic and on the crop dam-age rumors. The grangers, Pacifics and Southwesterns lost 1 to 2 points The closing was active and weak at aboue the low level.

Prices of bonds were well maintained during the stagnation. SUGAR.

TRIFLES

-than the cars of other lines. It is what is INSIDE them that makes then

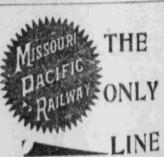

more comfortable,
For instance: The seats in our redining-chair cars are provided with last head pieces-clean and cool. Our dis-ing-cars have electric fans, and aregot. geously decorated with flowers. I every car is a thermometer, which it constantly consults in order keep the temperature of his car as near ly uniform as possible, By themselves, these things are triffed

but the sum total of them goes all way toward making a trip over Burlington a mighty enjoyable expen-Burlington trains leave Denver (M

and 10.00 p. m. for Omaha, Kansas City, St. Louis, and Chicago. Tickets at all R. G. W. Ticket Off.
