Beautiful City of David - Mixed Inhabitants - Travelers Down with Fever-Interesting Ruins-Country of Hidden Treasures - Fabulous Wealth Unearthed -People Live Well-Are Polite and Hospitable.

#### annowwww.www.www.www.www.www.www.

from the exploring party was delayed in the mails and arrived too late to be published in its chronological order. It should have preceded the letter published last week.]

20

LL visitors are delighted with David. It is a beautiful town. beautifully located on a wide plain. Its streets cross at right angles, and are kept clean; there are sidewalks also clean and well paved, and the houses, though all but one or

two are one story, have a homelike appearance. They are one story because earthquakes sometimes visit these parts, and at such times a two story house is at a disadvantage. There are several large stores, two drug stores, and the town also enjoys the distinction of having a British and a French consul. There are no manufacturing establishments, yet a coarse cloth is made by the women, and hats of very good quality are made by both men and women. But the chief source of wealth Hes in the agricultural products. Rice and corn are raised in abundance. Both grown side by side in the valley or on the hillside. To one accustomed to see rice in water during three months of its growth, the sight of a dry rice field is a little strange. Beans is another source of wealth. Hides and beel another, and such medicinal plants as sarsaparilla, and ratefila are also exported. Panama is the market, and a const steamer touches regularly at the port of Pedregal, a few miles from David.

#### MIXED INHABITANTS.

The inhabitants, though of mixed blood, have the white predominating. There is negro blood also mixed with the Indians, but not so much in the town as in the country. Between Bu-gaba and David I would venture to say gaba and David I would venture to say that half the people have more or less African blood in their veins. This is accounted for by the fact that in the early days the Spaniards shipped in many slaves, who when freed remained, intermarrying with the Indians. We had decided on a three days' rest at David, and circumstances, entirely unlooked for forced us to take them.

unlooked for forced us to take them. Through the mountains from San Marcos, Costa Rica, for nearly three weeks cos, Costa Rica, for nearly three weeks we were wet every day, sometimes be-cause of the rivers we had to ford, or swim, sometimes because of the rain. This was too much of a strain on our systems, and before we reached the Rio Chiriqui Viejo, we were down with

[Note,-The following communication | long before this we are forgotten by ninety-nine out of every hundred that saw us. At night we reached the little village of Chiriqui, about six hours travel from David. We applied at a neat looking house for eamp accommo

dations, and were given a hearty wel-come, and before the rain came we were under cover. Although still sick we were better, but we had no appeiite, not even for the bread of David. But the lady of the house sent us in a plate of beans, a sind new to us, which proved both tasy and strengthening, the first thing for several days that we had relished. We hought some more and had had bought some more and had he cook them for us.

After two hours ride the next day we came to absolutiful valley of fifty thou-sand acres or so, cleared of trees exsand acres or so, cleared of trees ex-cept the surrounding mountains, and covered with a thick carpet of green grass. Passing across this we reached a hadenda called Choreha, and hero decided to stop a few moments. The superintendent, when he learned we were Americans, gave us a hearty welsent his servants to take care of our horses, and invited us up stairs, where hot milk was soon served. He hastened to show us that he was an American Cuban, that is, a Cuban who greatly appreciated what the United States had done for his country. On Satisfies had done for his country. On Friding he kindly had some rice, meat and plantains done up for us, with the remark that we would find nothing to cat this side of San Lorenzo, which we reached two days later. This is a town of five hundred inhabitants. It has a store in which are found among other binser sectors of the sectors things, canned salmon, corn, sardines, and crackers. It has also a church, and

the farital padre we have seen. Not far from San Lorenzo we came to another river, this one swollen with the recent rains so that we had to boat our things across, and swim our mules

things across, and swim our nules. We were fortunate in getting a boat, for often we have to swim our nules, packs and all. That night we stopped at a town colled "El Hobo," not a very suggestive name, but nevertheless a ro-mantic little village, inhabited by a social and hospitable people. We pitched our tents near a prominent house, turned our mules out with the animals of the village, and found them next morning near by. The Indians presented us in the evening with some eggs and new corn tomales, and we gave them some medicine, of which

gave them some medicine, of which they were very much in need. The next day our trail was through an open country with an abundance of grass until we reached the hacienda of San Juan. This is one of the largest

cattle ranches on the isthmus. I esti-mated that a thousand head of cattle and horses were in sight from our camp, and the grass seemed almost him-From the ranch we soon passed into

the virgin forest, crossed the San Juan river and continued under the shade of trees, and thick clouds which already were forming for the afternoon rain. We reached a river Friday, Aug. 16th which to look at was too deep to ford. Brother Klenke rode in to test it, but Brother Klenke rode in to test it, but soon returned with the disappointing remark, "It will swim our animals." What to do was the next question. There was nobody within five miles. Our ax handle was broken and we could not make a raft, and if our things were wet, a day would be lost in drying them. So we did the only thing we could do and proceed on our journey. We stripped and carried our baggage over. The water came up to our necks, but the stream was not swift, and was only thirty of forty yards across. Here only thirty of forty yards across. Here was a new experience. We had rafted across rivers, swimming behind to push the raft over. We had forded when the water took the mules nearly over their backs, and we had crossed in cances, but this was the first time we had car-ried our luggage over. But in two hours we were on the trail again fresh from our morning bath. As we came out from the river bottom we reached an open country cov-ered with rich pasturage with here and

have been in for weeks, with bad and muddy roads.

Sona, where we spent our last Sun-day, is a beautiful little village, on the very tops of the hills, where a sort of mesa is formed, and everywhere the of mesa is formed, and everywhere the ground is covered with a carpet of green grass, kept clean by the con-stant rains that one could walk out with his carpet slippers without fear of getting them solied. The houses are scattered promiscuously, every person building where seemeth him good. A neat little garden, containing cane, banagas or plantains, corn, a menco bundling where seemeth him good. A neat little garden, containing cane, banatas or plantains, corn, a mango tree or two, a gourd tree which fur-nishes cups to drink out of, and a few vegetables, surround each house, and contrast beautifully with the green grass. The houses are mostly thatched, without sides, or with sides of upright sticks so wide apart that plenty of fresh air is always admitted. But we must except three or four, the one we occupied being one, and the acting al-calde's, Senor Rafael Morgas' another, which were built of lumber sawed by hand, and carried on mule back from the mountains a few miles away. Every bedy was sociable, and of course anxious to know who we were and where we were from. We gratified their curiosity, and increased their wonderment by answering their quesvonderment by answering their ques-

At 6 o'clock Monday we were in the addle. Senor Rafael Morgas made no charges for our pasturage and house accommodations, and refused to take pay. We thanked him, bade him and his kind family good-bye, and as we passed the house of our washer wo man bade her good-bye as well. In al must every house we passed people were at the door and called out "bien viaje," a pleasant trip.

PEOPLE LIVE WELL. At noon next day we reached Las Palmas, a neat little village, so named because of the great number of beautiful paim trees including cocoanuts growing about the village. Here we escaped for noon, and drove to the house of Senor Reyes, a promin-ent citizen, from whom we enquired as to where the alcalde lived. Senor Reyes at once invited is to camp at his house, stating that the alcalde lived next door, at present was away, but would return in a few moments. We camped, and had no more than un-packed when the lady of the house asked us to have some refreshments, Before we left, dinner was ready, and Before we left, dinner was ready, and we were invited. The meal consisted of tortillas, beans, soup, rice, meal and eggs, served in clean white plates, with knives, forks and spoons. We judged, as the meal was not prepared especi-ally for us, that the people live well. And why not? A very little work and an abundance of the richest vegetables and most whother weins and be an abundance of the richest vegetatics and most wholesome grains can be produced, and the abundance, of grass stiggests that meat and milk can be produced equally cheap. These people ought to set as good a table as any people in the world.

HOSPITABLE PEOPLE.

The people are also very hospitable and patient. No inconvenience seems to bother them. We often camp with them in their small huts. We kick out their dogs and pigs, put our cots in a dry place and pils, put our cots in a dry place and pile our packs where they, too, will be dry. We cook on their fire, using their wood and their water, which perhaps the woman has carried half a mile up a hill, and they take it all is good part seemingly delighted to in good part, seemingly delighted to have us around. When we eat they often bring us some dainty dish, dainty to them, such as an egg or two, a plate of beans, or of rice, a piece of sugar, their sugar is something like our maple sugar, or a tortilla made from new torn, and invariably, which pleases us nore than anything else, they beat their hungry dogs and cats away. The cost to us is nothing, but we always make some return gift, which invari-ably pleases them. I speak now of the

are off to the fields, if before noon, or if after are usually in a hammock or on the rough cane bed. Everybody works in the early morning, and usual-ly everybody rests in the afternoon.

Yesterday we reached Santiago the capital of the Veraguas district and a town of two thousand five hundred inhabitants. Here we find the first display of military power, there being three hundred soldiers stationed in town. They live off the people and drive in stock for slaughter at pleastree never asking who is the owner and never offer pay. When they are to go out on a skirmish they take horses and mules at pleasure. The in-

habitants are in a semi-terrorized con-dition. But this is war in Colombia. We called on the Prefecto, who in-formed us that there was in town an American, Nathaniel J. Hill, by name. We immediately hunted the gentleman up, and found a hearty welcome. He provided us with pasturage, for our animals, and a couple of rooms to camp in, sending over such little convenience as chairs, lamps, water pitcher, etc., which we were in need of, and we were comfortably located to rest over Sunday.

RENIAMIN CLUFF, JR. Santiago de Veraguas, Colombia, Aug. 24, 1901.

"A short distance out of Buena Vista here is a cave swarming with spiders f immense size, some of them having egs four inches in length and bodies as "A short distance out of Buena Vista there is a cave swarming with spiders of immense size, some of them having legs four inches in length and bodies as large as that of a canary bird. The cave was discovered in 1868 and was often visited by ploneers on their way to Cal-ifornia, who obtained their webs for use in the place of thread. "Early and late the cave resounds with a buzzing sound emitted by the spiders as they weave their webs. The webs were tested in 1871 and found to

quive no tanning. "A number were cantured and tamed, and manifested great affection for al members of the family. They were far superior to a cat in exterminating rats and mice, following their prey into the holes in the walls and ceilings. One spider, kept as a pet by a Buena Vista lady, used to stay all night at the head of her bed acting as a sentinel."

ere of company C of the Ninth United States infantry. The treachery evinced on that occasion by the professedly friendly natives will cause the war department to mistrust even the most cordial advances in that region in the future and more United States troops are to be rushed to Samar to thoroughly subdue the treacherous rebels. Many prominent army men believe that Samar may give Uncle Sam trouble for years to come.

Chiriqui Viejo, we were down with the fever. It was not bad, however, and did not delay our traveling, but on arriving at David we gave up, or rather relaxed, and for two days were on our backs. The people around were kind, bringing us such things as we were in need of. A couple of days of rest restored us, and by Sunday we were able to go out. First we called on the Jefe militeria, who assured us that so far as the gov-ernment was concerned we would have a safe journey to Panama, but, he add-

a safe journey to Panama, but, he add-ed, "There are bands of banditti, against which we cannot assure you." In talking afterwards, however, with a prominent revolutionist we were as-sured that no harm would befall us, and our journey would be perfectly safe so far as the revolutionists were concerned.

The French consul proved to be very sociable, and his family very interest-ing. He talks a little English, and took no little interest in us and our trip. As a mater of double security, he kindly signed our papers and placed on them his official seal. The English conthem his official seal. The English con-sul we met at Bugablta. He assured us that if he could do anything to ald us he would be pleased to place himself at our service. "There is no American consul here," he said, "so if I can act in the stead of one for you, I shall be pleased to do so."

Within forty miles of David, at a place called Boqueta, is a flourishing American colony of twenty families, mostly from California engaged in the coffee business. They declare, so I am informed, that the climate is similar to that of California, and that the place is as healthy.

#### INTERESTING RUINS.

But the ruins found in the district of Chirique interest us as much as the people now living, "Everywhere," says people now hving. Everywhere, says Mr. Genuit, a Californian whom we met at David, who is an enthusiast in archaeology, "are ruins to be found indicating that at one time at least in the world's history this country was densely populated. One day's drive from here are the ruins of an ancient city, and everywhere can be found mounds and graves." We had seen many of the mounds and go-called graves or guacals in our brief research, but did not know, of course, of their extent.

#### HIDDEN TREASURES.

In these graves, so called, for very seldom is found any sign of a skeleton, or that a body was ever there, much treasure is often found, principally golden ornaments and images. Plates, cups, mugs, and various dishes of pure gold; images or various animals and birds, and, it is said, the image of a horse have been found. The recepta-cles of this treasure are stone chests or boxes, built up of flat stones, then covered with a large flat stone or some-times func forces in food the sometimes of two stones. In fact, they are placed in a chest similar to that in which the Prophet Joseph found the plates in the Hill Cumerah. Thus they are kept safe and dry. It is said that as much as seven hundred is said that as much as seven human pounds of gold have been discovered in one chest. Throughout all this country at intervals these chests are found, and they are found as well in the region of

At intervals these chests are found, and they are found as well in the region of the Cauca and Magdalena rivers. On Monday morning early we were on our way, stopping in town hong enough to post some letters, buy some corn for our animals and some food for ourselves. We were a strange and interesting sight to the people. But the greatest interest of all was elicited when it was learned that we had come by land from San Jone de Cesta Rics. The actorishment over the entire trip from the United States did not seem to be so great as that over the trip from San Jose, And then we had taken the ocean beach road, had crossed the Rio Grande de Terraba, and more still the Rio Chiriqui Viejo. All of these farts were passed from mouth to mouth by the wondering crowd. And now we were going to Panamal. That fact was were going to Panama! That fact was also a matter of comment, for it scened to them that Panama was a long ways off. The revolution did not seem to them, from what I could indue, so much an obstacle in our way as the long and bad tanks. and bad tonds. Finally, we were away, and I suppose

poorer classes, the Indians. We passed through three pretty little Indian vil-lages, one of which, Rio Jesus, interested us very much. As a rule the houses are built around a large open grass plot just at the edge of the forest. The grass plot seems to be the commons, for there are feeding the horses, cows, and pigs of the village. The houses are invariably of thatch roof of palm leaves, with sometimes no sides and at others sides made of upright sticks placed an inch apart. In one or two cases the sides are also thatched with palm leaves. Little children dressed in the modesty of nature were playing around the houses, while the women in around the houses, while the women in many places were pounding or cleaning rice. The rice is all cleaned by hand. A log three feet long is hollowed out bowl shaped in one end, like a mortar, a pounder, consisting of a stick three or four feet long and weighing about ten pounds, is rounded on the ends and with this the hull is pounded off. The

rice is afterwards cleaned either by a fan or the winds of nature if they are there a clump of trees and a village. biowing. About two to three pounds The same description of country we are thus hulled at a time. The men east from Harvard City, then a thriv-says:

### MONSTROUS SPIDERS OF COLORADO annon a Prof. E. T. Laughton has returned to | ing mining camp eight miles west of Buena Vista. In 1880, a man named Shultz cut his way into the spiders' den. He did not return, and a week later a searching party found his body partly buried in the spiders' cave under a mass of fallen we'r ac trwnid have scouled con-

his home in New York after spending in summer in exploring the mountains near Buena Vista, Colo., and investigating the habits of a species of monster spiders found in the middle Cottonwood Pass, says the Washington Star.

rock. As it would have required con-siderable timbering at an expense of several hundred dollars to recover the body, and as the man had no known relatives, it was left undisturbed. Shultz's skeleton is still in the cave, but Little definite is known of these spiders, but around them has been gathered a mass of Indian legend and prospectors' yarns that rival those of Munthe spiders have found another home further back in the mountains. chausen. Many years ago these spiders Some of the tales told about these spiders are given in an old letter which lived in a cave easily reached by tourhas just been found in Buena Vista. It

of soak and rinse with Pearline washing for every hour of hard rubbing with old - fashioned washing. You save half the time. It's easier, pleasanter, healthier work. Soaking the clothes in Pearline and water loosens the dirt so that you rinse it

out with little or no rubbing. This soaking is absolutely harmless to the clothes; takes hold better, does the work more thoroughly, makes it easier to get things clean than with any soap. 629

Wine of Cardui is the best guardian of a woman's health during every period from youth to old age. At no time in her life can she afford to be without this simple vegetable medicine, which is now used throughout the civilized world. The young girl who takes Wine of Cardui when she is 13 years old, avoids the shocks and distresses of coming womanhood. With the aid of this great emmenagogue, she developes into a healthy, beautiful woman and avoids the pain so common to her sex. It helps her safely into womanhood. As a young wife and mother it sustains her during the trials of the new relation into which she has entered. It has brought the laughter of happy children to thousands of barren homes. The mother who uses this pure Wine keeps her health and makes herself a blessing to her family. Later it gently leads her through the dangerous period known as the change of life. This pure harmless Wine is the best medicine a woman can take at any trying crisis. It is not a strong medicine, but may be taken every day in the year by any woman with benefit. It does not force results, but it corrects all derangements of the menstrual organs. It strengthens the nervous system, gives tone to the bodily functions, acts directly on the genital organs, and is the finest tonic for women known to the science of medicine. It is Nature's provision for regulating the menstrual function.

CHICAGO, ILL., March 28, 1901.

I have used five bottles of your Wine of Cardui and as many packages of Thedford's Black-Draught and can say I have found great relief for my ailments. I have greatly recommended it to all my friends. Your medicine is in great demand at the neighborhood drug store. Mrs. WILLIAM VOLLMER.

MOBILE, ALA., May 18, 1901. I have used Wine of Cardui and it has given me relief. I used to suffer with my monthly periods, but now, since we have been using Wine of Cardui I never have a pain. I am married, and since using your medicine I have had a fine baby girl. Mrs. EMMA JAMES.

Over 1,000,000 women, besides Mrs. Vollmer and Mrs. James have taken Wine of Cardui, and seldom, if ever, without benefit. You can get the same relief as they secured, if you pursue the same course. Try the Wine of Cardui treatment. For advice and literature, address, giving symptoms, "The Ladies' Advisory Department," The Chaitanooga Medicine Company, Chaitanooga, Tuna.
