THE EVENING NEWS.

GEORGE Q. CANNON. EDITOR AND PUBLISHER. April 29, 1870. Friday.

FARTH CLOSETS.

By an act, recently passed by the legislature of Louisiana, it is made unlawhereafter dug within the corporate obligatory upon the owners of property to fill up all sinks and vaults now in use within the period of one year. This old system is to be dispensed with, and earth-closets are to be adopted in its for the removal of all offensive odors is gaining ground rapidly in sections where it has been tested. . The deep vaults which have been used will soon entirely disappear, along with waterclosets, which are but little better. The use of dry earth is proved to be incomparably superior, in every respect, for the purpose for which vaults and water have been used.

In a city like New Orleans the adoption of earth-closets will prove a great There the drainage by water boon. has been impossible by reason of the want of fail in the lay of the land. The levee has always been the only protection of the city against the Mississippi, and the water of heavy rains runs off slowly to the neighboring swamps. Open conduits, toul with garbage and green with stagnation, have long offended more senses than one in the best portions of the town. There was no other means of getting rid of the night-soil than the old sink or vault-there doubly noxious from the fact that it was almost on the surface of the ground. It is thought that the epidemics of cholera and yellow fever, with which that city has been scourged in former years, may have had their origin in, or at least been considerably aggravated by, the feculence which the best system of sewerage the city possessed would not remove.

The right of property in the feculence removed under the dry-earth system is reserved to the "New Orleans Sanitary and, Fertilizing Company" for a period of ten years, subject to the proviso that the company shall supply, at fair price,

decided improvements on the pure white, black or red races; that, in fact, it is an advantage for a man or woman to have a dash of negro blood in ms or her veins!

The writer of the article in question takes pains to say that he expresses no theory whatever on the subject; but he adds:"

"The question is, however, as we have said, one of vast interest, the importance of which is apparently culminating almost daily. To every thinker and ethnological student the question involved in the spectacle of Thursday is of great importance. As we have said, each student must decide ful for any vault or sink-for the pur- it practically for himself. Theoretically, pose of getting rid of night soil-to be all have the same interest in its solution; and now that the negro has received the batlot, his character and capabilities, his limits of New Orleans, and it is made past and his future, the possibility or impossibility of his fusion with the white, will justiy attract a wider attention and more scientific scrutiny than they have ever yet received."

It is a significant fact, viewing the article from our stand-point, for a paper stead. This plan of using dry earth like the Cincinnati Chronicle to discuss the fusion of the whites and blacks as an undecided question of "vast interest." It reminds us of a conversation which occurred in this city, in the summer of 1865, between several of our citizens and a number of prominent gentlemen, one of whom was a reputedly leading statesman, on the subject of the amalgamation of the whites and blacks. The statesman made a remark that conveyed the idea to the company that he was not averse to such an admixture. A leading citizen, probably thinking he might have misunderstood him, pointedly asked him if he was in favor of the amalgamation of whites and blacks. His reply was: "Why not?" That such a reply should come from a prominent man in the nation, one that held a high place in its councils; and one, too, who wielded a great influence in his party, surprised us; and we thought alas! for

> such views as its leaders. What shall be said for the city where a daily paper declares that this question is one of great importance to its citizens,-a question which "each student must decids practically for himself?' If each student does this, many years will not elapse till the inhabitants of Rio de Janeiro.

A WRITER in a recent number of the San Francisco Call speaks in gloomy terms of the prospect of drouth and famine this year in some parts of the State of California. He says in some localities, farmers their plowing and seeding.

"From all the southern counties, the cr

A NEW GUNPOWDER. -- Carbolic acid. treated with concentrated nitric acid forms crystals of pierie acid, yellow and bitter, used in dyes. Combined with potash, it forms a golden colored gun-powder of prismatic needles, insoluble in alcohol and nearly so in cold water. but dissolves in boiling water. At 572°F. it becomes orange red if heated slowly; and yellow again when cooled. If heated quickly to 620° F., or touched with a red hot body, it explodes violently, with immense volumes of gas (nitrogen. carbonic acid, hydrogen and oxygen) set free, and leaves a slight residuum of carbon and potash. Its smoke is light and easily dissipated, and neither corrosive nor poisonous, like that of common gunpowder. It does not get damp and spoil like gunpowder, by imbibing moisture from the air, so that it will be useful in the dampest mines, and do away with much of the need of strong ventilation. It is coming into use as blasting powder and for fire arms of various grades of strength and kinds of action. The blasting powder is a mixture of picrate and nitrate of pot-For guns, charcoal is added to diminish its violence. The blasting force is much greater than that of common gunpowder and equal to nitro-glycerine. It will be of great use, therefore, as torpedo powder for oll wells. It is nearly as cheap as common gunpowder. Its brilliant yellow color

is another advantage, for it cannot be mistaken for other substances in common use. The French government are carrying on trial experiments to see if it cannot be substituted for its old gunpowder in army practice.

A FACT IN REGARD TO HORSES .-There is perhaps no more marked exhibition of nature's law of adaption of means to ends, or of supply, to waste, than is shown in the arrangement of the horse's foot. There terminates the various ducts of communication and supply, rendering it a point in the animal economy of no little importance. The extremity of the limb being of such a vital character, and coming in contact with the ground, needs protection; accordingly the hoof is constructed especially, it appears, to prevent' injurthe Republic that accepts men with ing the inner portions of the foot in coming against the ground, and not with regard to the injury from above or on the sides of the foot; a consistent fact, since, in the state of nature, these portions of the foot are not subject to injury any more than the rest of the animal.

The direction and arrangement of the fiber of the hoof prove this point, as do practical tests also. A nail driven into Cincinnati will be as piebald as those of the wall of the hoof from below, on account of this arrangement of the fiber, occasions no pain, but a nail clinched on the top or side of the hoof with a hammer, Induces pain, and in some instances, where horses have been lame from no apparent cause, it has been simply the result of an inner irritation, caused by pounding the hoof. This is an important point, and should not be will not realize enough to pay them for overlooked by horsemen. An arrangement by which the nails on a horses 1. SHUMATES, or "Little All Right," hoof could be clinched without using a hammer would eventually be an ad

MANUFACTURED BY National Watch Company N:31570 0 All the grades of the Elgin Watches INCLUDING THE READY FOR SPRING TRADE. The company also call the attention of Watch buyers to the fact that the Eigin Watches now offered have an added improvement over all others, in a new PATENT DUST EXCLUDER So constructed as to enclose the works, and form a protection against dust, enabling the movement to remain in order without cleantible the time that a watch will ordinailly run without this pass etton. The company feel confident, after having had their Watches three years in market, and selling many thousands of them in all parts of the country, that the Elgin Watches are the best time keepers now offered to the American public. OVER FIVE HUNDRED DEALERS

In various parts of the land have unreservedly endorsed them. They are in use upon numerous lines of Raliway, including the Union Pacific and the Pennsylvania Central, and flicers of these roads, with other prominent inem as the be watche

the disinfecting and deodorising materials for earth-closets, as well as the whole apparatus of the new invention, to at owners or occupants of buildings applying for the same. The product of the earth-closet is

most valuable as a manure. We hope to see the system adopted in this city. As it increases in population, there is a greater necessity for the construction of such conveniences upon principles that will not interfere with health and comfort. Dry earth is plentiful here, nearly two thirds of the year. A plentiful supply can be stored in some dry spot for use during the season when it canfor use during the season when it can-not be obtained; and those who use it this year more than usual; the season is can dispense with the nuisance of a vault, and never suffer themselves, nor cause their neighbors or passers by to suffer, from any offensive odors on their premises.

THE Cincinnati Chronicle has a leading article on "Mixed Races," prompted by the writer's watching the procession of the colored people on the occasion of the Jubilee in that city to express satisfaction and delight at the adoption of the fifteenth amendment. He says:

"We were struck not so much by the orderly character of the element recently admitted to the rights of citizenship, as im-pressed by the evidence it turnished, if evidence were needed, that the process of the intermixture of races had already been carried to an immense extent. In the long column were arrayed the darkest negro of unmixed African blood, the mulatto, the quadroon and the octoroon, with all that symmetry of form and almost classical outline of feature vaunted so highly in Havana and Lousians. At a single glance we could compare the pure white and the pure black. and all the shades of difference gradually becoming less and less distinct, and less strongly marked, until they were blended and almost lost in the woman who, had she worn gloves and glasses, could not have been distinguished from the American or European of the purest type."

In his article he disclaims all intention either to advocate or contend against the amalgamation of races. Still, it is a noticeable fact that his quotations are all in favor of amalgamation, cellent for colds. Gardener's Magaand show the superiority of the hybrid sine. over the pure races. He quotes from the testimony of men who have been in South America, in the French colonies of Martinique and Guadaloupe and on the island of Tristan de Cunha, to show that the interbreeding of the whites and negroes has produced, to use the language of one of his authorities, "a favorable, rather than unfavorable, influence upon there sultant race." He also gives instances of the mixing of whites and Indians, as in the case of the inhabitants of the province of St. Paul, in Brazil; and of the admixture of whites strument used is the recently patented

comes up for more rain-rain for the growing corn, and rain for the pastures. The plains and valleys, south of Point Concepcion, in the counties of Santa Barbara, Los Angeles, San Bernardino and San Diego, are in the beginning of a year of famine. All through December and January the people of Los Angeles county were watching the rain-cloud, that constantly came up from the southwest, passed over their heads, and struck against the mountain range to the north and east of them. About the second week in February, there was a rain-fall of some two inches; and the telegraph reported that people were shaking hands and congratulating each other, in a manner similar to the custom of New Year's calls, glorifying over the fact that the dry season was ended. But on the 28th of March, a land owner and an intelligent gentleman of Los Angeles county, writes, also backward. Altogether the old settlers have been puzzled by the capriciousness of the wind currents.

In San Diego he says it is still worse; for it is said there that the people only have "climate for breakfast, harbor for dinner and railroad for supper." The plains through that country are covered with the bones of dead herses and cattle. He proposes, as a remedy for the recurrence of these evils, the establishing of a system of irrigation. It is too late, he thinks, this A complete system of irrigation should be inaugurated, he argues, in the valleys and on the plains of California.

POULTRY .- Feed your poultry on raw onions chopped fine, mixed with other food, about twice a week. It is

better than a dozen chicken cures for cholera. Fowls exposed to dampness are apt to be troubled with catarrh. which will run to croup if not attended to. Red pepper mixed with soft feed fed several times a week, will remove the cold. Pulverized charcoal, given occasionally, is a preventive of putrid affections, to which fowls are very subject. Sitting hens can be cured by putting water in a vessel to the depth of one inch, putting the heu into it, and covering the top of the vessel for twenty-four hours. The vessel should be deep enough to allow the hen to stand. Pulverized chalk administered with softer feed will cure diarrhea. This disorder is caused by want of variety in food, or by too much green food. Garlic fed once or twice a week is ex-

RAPID TELEGRAPHING .- The new telegraph company, the "National," which is now erecting wires between New York and Washington, and will do so all over the United States, expects to transmit dispatches at the rate of 12,000 to 18,000 words per hour over a they have already demonstrated, by actual experiment, that they can work perfectly over 2,000 miles of line at the rate of 200 words per minute, with 28 cups of battery, whereas no Morse machine is able to work through even 500 miles at the rate of five words per minute, with 50 cups of battery.
