

## FARM HORSES.

**Blots Concerning Their Feeding and Management—Horsekeeping.**

Among other subjects discussed in the special farmers' institute edition of the Iowa Homestead is the feeding and management of horses. Following are in brief the more important points emphasized in the discussions:

A great many of horses and very little attention is given to them by some farmers. There is quite a difference in the manner of feeding, but all agree that corn, oats, and meal hay are best to feed horses. One writer says to the barn in the morning and drives in any waste hay which has been thrown over, and even the horses eat this before it gives them grain. The writer finds that 20 lbs. of grain will suffice for a 1,000 pound horse. Cattle and horses not accustomed to work are often fed grain whenever the work horses are fed, which is not considered economical on the beef plan. They should be fed well consistent in growth rather than fat. One man has lived more than 6 years without knowing much about grain. Most of the advises advised that a good plan is to keep the horses in Maryland, and even so far north as central New Jersey, artificial heat may be dispensed with, but it will be found safe and more convenient to have it.

In this house a number of crops are grown in blossom every winter, such as cabbages, lettuce, strawberries, etc., and they are given a good lot of vegetables, which are cut up and served raw or taken down and the ground cropped with closely planted vegetables. The string and tillage which the land requires seem to keep it free from weeds and plant diseases, so that the winter crops, although grown right along on the same soil, do not suffer from them.

The whole United States, Professor Deed and certain at least 100 species of woods, Michigan has 122 species, with the number increasing annually, and every new kind coming to day.

**HAY YOUNG** passing under the name of "Losing Strength," is a very interesting article, written by a man who has had a great deal of experience in raising and marketing hay.
