The Baton Rouge Advocate of the 14th ult. says that a citizen of that town has discovered a new system for the manufacture of sugar, by which he can, with the machinery now in use, make sugar pe feetly white. The molasses, which will be in less quantities then of present, will also be changed into the oldinary natural syrup.

"I never used revenge" writes Lord Hurbert, "as leaving it always to God, who, the less I pun sh mine enemies, will inflict so much the more punishment on them." This is pardon with a vengance!

A lady, one night at a party, was much annoyed by the impertinent remarks of a coxcomb who sat near her; at length, becoming tired and vexed, she raid, "Be pleased sir to cease your impertinence." The fellow was astonished at so sudden a rebuke, and could only reply, "Pray, Miss, do not cat me." in no fear," she replied, "I am a Jewess."

A quarrel occurred between two neighbors, and a death taking place in the family of one of them, the offender was not asked to the funeral. "Never m nd," said the other, as the cortege moved by he door, "we'll have a corpre of our own at home, by and hy, and see then who'll be invited."

One little "garden patch" of ours, says the American Union, has been profitable, very, this scason.— The bugs are up the cuembers, the chickens are up the bugs, the neighbors' cals ate up the chickens and now we are in search of something that will eaf up the cats.

In June, 956,500 three cent pieces were coined at In July, 719,409. Total for two months,

A few days back, in a printing-office in Vienna a Hamburgh compositor refused to set the types of a manuscript, because he found it ut'erly impossible to deciphen it. The factorum complained against him tary authorities, he was forthwith arrested, and after a month's investigation, sent for one week in chausto the blockhouse, for being a blockhead.

About sonset we were surprised by the most delightful sounds, the blerks very charitably determined upon some the bread making properties of the four must appeared to be their evening by my agreements. It

Great Mechanic thought best adapted for the purpose when He made animate machines, the near course we pursue: Feed the geese kept for breeder is absolute perfection reached. For we may be ers, moderately well all winter with a mixture of very sure that there must be excellent reasons why grain and boiled roots. Provide a warm, dry, well-His contrivances are best, though we fail to discover, sheltered place for sitting; and when the goose is them. We can see, however, with what admirable on the nest, give her regular daily food, principally economy of power the jaws of the horse are comtrived to grind his corn. The heavy, head-hearing upper jaw is fixed; the lower one moves, and being of little weight, requires but little power to move it. It is also an upward pressure, so that no weight rests upon the corn, as in the present erroneous sys. "No, sir. You took the ____?"

"Took wof? Yere's yure corntentible copoffer and, proceeding to dash a loose penny lower grinders, with their serrated edges, may be nonsense. Who ever saw moisture adhere to the toward the attendant, which lay upon the ma- likened to little millstones of small surface, which, with a semi-rotary motion, reduce the corn to oreal. Designedly or not, the conical mill is on precisely the same principles throughout. The upper stone ing 14 cwt., like the upper revolving stone of the present foills, is only 1 cwt., 2 qrs. Thus the unword pressure is as nisely proportioned as the horse's jaw; sufficient only to open, not to grash the corn. It is, too, of small surface, like the grinders of the horse; and set at an angle not many degress removed from that of the harse's jaws,

> rup has very ingeniously carried out. Instead of having one small conical surface, whereby some of the meal would be re-ground, and the stones become clogged, though not to the same extent as on the old principle, he divides even this smallest surface into two, by having two pairs of conical stones on the same shaft, the lower pair about two feet three inches beneath the upper, so that each surface And to prevent any portion being re-ground, the first object to be avoided in good milling, there are vertical brushes fixed ing to a radius of fourteen or fifteen inches, and nearly touching a fine meshed cylinder that surrounds the whole mill. No sooner, then, is the fine flour liberated from the upper stones than it is sent through the cylinder by these revolving brushes, whilst all that will not go through has not been suf-

> destroyed, makes heavy bread, which is very unhealthy; and of which, from some cause, we have quite too much, in the present method of grinding. England or France, it would be quite as applicable to Utah, and we recommend the above conical observations to the notice of our mechanics and millers, and if there is a reasonable prospect of improving our flouring establishments, that an exper-

down stairs, the side of his head scraping the paint from the edge of the steps, and his legs, mean time, performing an involuntary pirmette, which would have done infinite justice to a French dineing master.
