## CRICKET.

One half of the members of the Deseret Union Cricket Club played against the other half, on Washington Square, on Monday the 26th. Wickets were pitched at 10 o'clock, and the play was kept up until about 7 p.m. The batting was excellent on both sides; and the game was said to be the most closely contested that has been played in the city. The Club, we understand, are anxious to play against some other club, or any eleven in the Territory, between this and the 6th of October. But testants of Monday will probably play another game. The opposing sides were distinguished by rosettes of red and blue. And, as will be seen by the following tabular score of the playing, the reds won by 10:

> BLUE. First Innings.

H. Hedger, sen., b. Wells, R. Cooke, run out, John Paul, c. M. H. Walker, S. S. Walker, c. S. Cooper, b. S. Wells, J. Payne, b. W. Cooper, A. Stayner, c. M. H. Walker, G. Luff, b, W. Cooper, R. THE VALUE OF THE CORN HUSK.

A NEW INDUSTRY.

Every body is familiar with husk mats, and it is well known that excellent mattresses can be made from this article, but a very small portion of the crop is saved for these purposes. It is not generally known that the husk is applied in foreign countries to many other important uses. Some writers even assert that the value of the husk crop, if utilized, would be nearly equal that of the oat and barley crops of the country combined. We have seen most excellent husk letter paper, and it is said better paper can be made from it failing to make such a match, the con- than from either linen or cotton rags; and, because it has great hardness and firmness, exceeding that of the best hand make English drawing papers, that it is especially adapted for pencildrawing, water colors, and short-hand writing, for which latter purpose it is extensively used. Its durability, it is claimed, renders it peculiarly valuable for documents, records, bank notes, bonds, etc.

Corn husks contain a long, straight, strong, flax-like fabric, which can be spun, like flax, into a thread, and the thread, like linen thread, woven into cloth of great tenacity and strength, which excels all the course materials in common use, in resisting decomposition. This will furnish an excellent substitute for coarse flax, and hemp

cloths, and bagging. Again in the course of extracting the corn fibre, long fibres are found at the bottom of the boiler, in a spongy condition, filled with a glutinous substance, which on closer examination, proves to be a nutritious dough. This may be dried and baked, and furnishes a good, wholesome, sweet bread, especially when mixed with wheat flour. It possesses the peculiarity, that it keeps perfectly sweet for months, although exposed to the air. It will not mould, and excels almost all known vegetable substances in its resistance to decomposition. Mixed with wheat flour, it would probably make a very good material for ship bread and crackers. Cattle eat it voraciously. Of this farinaceous, substance there are 15, pounds in a hundred pounds of husks; of the long fibre, suitable for spinning, a hundred pounds of husks furnishes 25 pounds, while, at the same time, 20 pounds of paper is afforded, from the 100 pounds of raw material—the entire Runs. valuable products being 60 per cent. of

the weight of husks. These interesting manufactures are chiefly conducted under the patronage of the Austrian government, and it is stated that the knapsacks for the Imperial army, wagon tops, floor cloths, fire buckets, and paper of all varieties, from the coarsest wrapping to the finest bank note paper used by the government, are manufactured at the Imperial mills. Besides these, there are two private mills in operation near For which CASH will be paid, or SOAP given Vienna, conducted on an extensive in Exchange. scale, the owners of which, it is said, became independently rich in the two first years of their workings, their mills being several times extended and kept running night and day to fill all their different orders.

The importance of saving the husks will be fully appreciated, when it is remembered that they are, simply incidental, to the production of a most important cereal, everywhere cultivated, and that they cost nothing beyond the care attending their collection and preservation.

The chief reason of the inattention hitherto bestowed by capitalists on this article is traceable mainly to the difficulty of procuring a sufficient supply of husks. We are satisfied that the demand will abundantly warrant farmers in saving and storing all the husks they can. They are easily baled and The day's amusements on the square marketed, like baled hay, and will find At President B. Young's
