

LOCAL AND OTHER MATTERS.

FROM TUESDAY'S DAILY.

A NOVEL SIGHT.—Large numbers of spectators were attracted to day by the appearance, on the streets, of the road steam-er imported by Mr. John W. Young. It seemed to be easily managed, and traveled along at a goodly rate.

CEDAR CITY.—Bro. John Urie, of Cedar City, called yesterday, and gave a capital report. He says the prospects for grain never were better in that locality than at the present time. Spring showers have been abundant, but now the weather is fine and warm, and the crops are thriving splendidly. Measles have been very prevalent among the children there, but they have disappeared, and health and prosperity are general among the people.

THE HAY QUESTION.—A gentleman of this city, under the non de plume of Z, has sent us the following timely and sensible comments upon the above question:

"One of the 'vexed questions' of this city is in regard to the practice of our hay sellers, the general presumption is that hay is sold by the ton, an understood standard of definite weight, but in practice a ton may be twelve hundred or any intermediate quantity between the above and the legitimate one, according to the elasticity of conscience possessed by the seller or the presumed ignorance or modesty of the buyer. When men purchase calico, sugar or eggs, it is by a definite measure, weight, or count. In the latter article we have heard of dealers being so very scrupulous in regard to the rights of purchasers that they would assort their stock of eggs and all that would pass through a given auger hole would be dealt out at a market rate of, say four cents a dozen, while those which would not pass would be considered worth five cents. A little of this scrupulous anxiety for right would not injure our hay sellers, and would be a benefit to all their patrons. Public sentiment and law long since abandoned the selling of grain and potatoes by measure, and no argument can be used to sustain such a practice that is not more decidedly applicable to the article of hay. Our city fathers should compel the weighing of all hay sold, and refusal to weigh or give weight should be considered *prima facie* evidence of fraud. If persons think they are unable to pay present rates for weighing the charges should be reduced to a nominal sum, so that justice may be done to the public, who should only purchase on presentation of weight ticket.

All practices savoring of dishonesty in the seller, such as weighing men or wetting hay should be punished by ordinance suiting the circumstances.

This matter has been called up by late occurrences, but the evil is of long standing and while some may think that the practice has the sanction of the customer, all will say it is one, more honored in the breach than in the observance, and a load of hay is just about as indefinite as the answer given in court, in reply to a question of assault by stoning. "What was the size of the stone thrown?" enquired the Judge. "About the size of a piece of chalk, your honor," replied the witness.

FROM WEDNESDAY'S DAILY.

GENEALOGICAL.—We are requested to publish the following:

The different branches of the Tyler family of American birth, residing in Utah, who are desirous of obtaining a genealogy of said family, may learn something to their interest by corresponding with Daniel Tyler, Beaver City, Beaver Co., U. T.

CACHE VALLEY.—Bishop S. Roskelley, of Smithfield, Cache county, who arrived from there yesterday morning, informs us that grasshoppers are making their appearance in that county in considerable numbers. They are however confined, as yet, to only a few localities, Logan, Wellsville and Millville having probably the largest proportion on the east side of Bear River. On the west side the pests are more numerous and general. Notwithstanding this the people in Cache are hopeful of raising pretty good crops this season.

THE DESERET CO-OPERATIVE NOVELTY IRON WORKS.—Yesterday afternoon we had the pleasure of visiting and inspecting the various departments of the Deseret Co-operative Novelty Iron Works, on Jordan St., in this city, and were surprised and very pleased with what we saw there. These works were started some few months since by a few men, poor so far as pecuniary matters are concerned, but rich in skill and industry. The shareholders, nine or ten in number, are all practical men, and are kept constantly busy, orders and work of various kinds continually rolling in. They have now procured lathes, planing machines, and all the necessary appliances to carry on every branch of their trade, and they are prepared to build steam engines, manufacture all kinds of mining machinery, stamp mills, saw and grist mills, all kinds of castings, including fire grates, sinks and all necessary in house fitting; also to furnish wrought iron gas piping of all sizes, etc.

This company has set an example that might be followed with advantage by men of other trades here. Its members started without money; they have not a moneyed

man amongst them, neither have they a drone; their only capital is their skill and industry; all work, and the profits arising from their labors are shared and enjoyed by the workers themselves, and no others. An association conducted on such principles is deserving of patronage, and it is gratifying to record that the success of this is now placed beyond a doubt.

WELLSVILLE.—We learn from Bishop Wm. Maughan and Bro. Francis Gunnell, who called upon us this morning, that, once more, Wellsville is visited with grasshoppers. This town has probably suffered more from their destructive ravages than any other in the Territory. This season, not anticipating their appearance again, the citizens have sown a greater breadth of country than has been cultivated for the last four years. To get seed to do this, and to procure their breadstuffs, many have sold their stock and everything they could spare. The Fall and Spring wheat looks very promising, and should the former yield an ordinary crop, enough will be raised to supply all the wants of the settlements. Notwithstanding the grasshoppers, hopes are entertained that considerable grain will be raised. The people are peaceful, contented and happy. Many have turned their attention to teaming to raise money to pay for their land. A co-operative saw-mill, of the Wood & Mann pattern, has been recently started and is likely to do good business.

DESERET MUSEUM AND MENAGERIE.—Yesterday afternoon we heard, in the vicinity of our office, a prolonged growl verging on an angry roar. On stepping out to ascertain the cause we observed Prof. Barfoot, engaged in superintending the removal, to the new premises of the Museum and Menagerie, one of the large brown bears, and the growl was bruin's method of uttering his protest of dissatisfaction at being so summarily disturbed. The new premises, situated on First South Street, opposite the Temple block, are much better adapted for this growing institution than those just vacated, being more extensive and roomy. The Professor is busily engaged to-day arranging and classifying the different departments. The valuable mineral and other collections will now be shown to much better advantage than hitherto, the building formerly occupied having been, for a long time past, altogether too small for an advantageous display of the numerous and fine specimens which have been so carefully collected.

The Museum is an excellent place to obtain a large amount of valuable information, in a nutshell; for the resources of Utah, so far as developed, can there almost be taken in at a glance. A large number of people, strangers as well as others, have taken quite an interest in its growth, many of whom have manifested this feeling by contributions to its various departments, in the form of mineral specimens, ancient and modern curiosities, etc., for all of which courtesies the donors have the thanks of the proprietor, and the manager.

HOME NEWS.

PARIS, 7, via FRANKLIN, 9.

The weather is very warm and pleasant and the roads good.

E. L. Clark and David Hess, of Farmington, with some ten or eleven others, have settled at Georgetown, late Twin Creeks.

A pleasure boat built at St. Charles, capable of accommodating about twenty persons, will be launched on Bear Lake in a few days. This will meet the wishes of travelers and pleasure seekers who may be somewhat encouraged to enjoy the beautiful lake, as the "monster" has not, that we hear of, yet made his, or her, or its first appearance this season.

LOGAN, 10.

Quite warm. Vegetation rallied wonderfully after the rain. All the people are busy as bees in fields and gardens. Numerous hosts of "hoppers" have made their appearance in the west field and are doing damage.

FAIRVIEW, 10.

Grasshoppers have appeared all over Sanpete and Sevier, but have not been seen here yet.

A large extent of ground has been cultivated here this spring and a beautiful harvest is anticipated. The brethren have been sowing wheat for the Indians, in Thistle Valley, where they seem to have lots of good cattle of their own and manifest a disposition to settle down and make something.

A number of miners from the East passed through here yesterday, for the purpose of prospecting in the hills for precious metals.

ESTABLISHED.....1842,

For the Manufacture of

RUSSELL & CO'S

IMPROVED

Double-Fan Three-Hitch Gear

Threshing Machines.

THE success achieved by this machine during the past season is without a parallel.

Over Eleven Hundred Sold

During the season just closed, all of which have given entire satisfaction. Men that have made a business of threshing for twenty years say that the IMPROVED RUSSELL will thresh and clean more grain of all kinds and do it better, with less power, than any machine in the country.

The Three-Hitch Gear and Pivot Cylinder

Has been found not only more convenient and durable than any other arrangement in use, but to run much lighter, and is less liable to get out of order.

The Adjustable Concave

Has greatly increased its capacity for clean and speedy threshing, and the

Separating Capacity

Has been vastly improved by the increased width of the Straw Carrier and the extra Beater in the second carrier.

The Two Fans

Now used in this machine have more than doubled its capacity for cleaning—in fact it is

the only machine that will clean grain fit for market, and do it in such quantities as will justify a man in spending his time in threshing.

DOUBLE-PINION HORSE-POWER,

With Russell's Patent Movable Center.

Russell's Improved Double-Pinion Eight and Ten-Horse Power, with movable center, has long been in use, during which time it has withstood the most severe tests; and for light draft, strength and durability, it has no equal.

The movable center, as constructed by us, is of great value, for by its use the master wheel is allowed to adjust itself to the master pinions, so as to divide the labor equally, thus overcoming friction and removing, to a great extent, the liability to break by sudden jerks or starts of the horses.

Russell's Patent Safety Coupling.

This inclosed safety tumbling-rod coupling is undoubtedly the best ever offered to the public.

Straw Stacker.

Straw Stackers, single length, sixteen feet, or to fold, twenty feet long, either with or without canvas sides.

Truck Wagons.

The Truck for hauling the Separator is made of thoroughly seasoned timber and ironed with the best of iron, and suitable for farm purposes.
