## STANDARD OF BATTERS.

ball STANDARD OF BATTERS. I often hear that argument about the standard of wenty years ago, but that is all stuff. The batters are better now why basebail should not improve like all other sports. It does. The trouble with the batter is simply that the opposition is harder to overcome. There are two forces in basebail, the offensive and defensive. At present they are about on a par, and that makes the game nearly perfect. When they get on a par exactly then the game will be perfect. The totell you my opinion of the relative strength of the clubs in the American eague this year. With the exception of one or two, they are all strong. Wash-ington still looks a little weak, but you never can tell. I do not think Detroit will be able to win the pennant as easily a strong lot of pitchers and his club is ful of ginger, but that is not everything. The New York club appears to be

PATENT MEDICINES Simple Prescription Which Relieves Every Person Who Tries it Promptly. A HOME MADE KIDNEY CURE.

Makes the Kidneys Act Properly and Overcomes Terrible Cases of Rheumatism and Bladder Trouble.

To make up enough of the "Dande-Ion treatment," which is claimed to be elleving nearly every sufferer who ases it for backache, kidney complaint, tore, weak bladder and rheumatism; set from any good prescription phar-macy one-hait ounce Fluid Extract Dandellon, one ounce Compound Syrup of Barsaparilia. Shake well in a bottle and three ounces Compound Syrup of Barsaparilia. Shake well in a bottle and take in teaspoonful doses after each meal and again at bedtime. Those who have tried it claim that it acts gently but thoroughly on the kidneys, relieving backache and blad-der trouble and urinary difficulties al-most instantly. Many cases of rheu-matism are known to have been re-lieved within a few days, the pain and swelling diminishing with each dose. A well known local druggist, who is in a position to know, asserts that this prescription, wherever it becomes known, always ruins the sale of the numerous patent medicine rheumatism in a majority of patent medi-cine manufacturers, and even certain physicians dislike to see published. Few gases, indeed, which will fail to fully yield to its peculiarly soothing and healing influence.

# time since the American league got a foothold in New York. It is a good sign when you see thirteen old players go out to Hot Springs to get ready for the spring season. That means that they intend to put up a fight. Griffith's club has been materially strengthened in the pitching box and in the field. The Athletics always play about the same game. They work along at a regu-lar stride and never make any jumps either way? My club at Boston is vory strong this year and I expect good results. In the addition of Thoney, Pitcher Morgan and others I am pretty well fixed. I am going to play Laporte, the former Highlander, at second base. That is where he be-longs. Now you watch him. The St. Louis club is always an uncer-tainty. They should be much stronger with the aid of Rube Waddell in the pitching box.

with the aid of Rube Waddell in the pltching box. The Cleveland club is always dangerous but as a rule does not last out the season. Chicago will play about the same game this year as last. In the National league I fail to see how any of the clubs are going to beat out Chicago. McGraw has made his team much stronger and he is the only one to go after the Cubs. The Phillies are also growing stronger, but I doubt if they are yet ripe for a pennant.

## AN ATHLETIC PRINCE.

AN ATHLETIC PRINCE. Maharajkimar Victor Nitendra Nara-yan Enters Cornell. While Indian princes have made their marks in athletics in England, where they are not uncommon, it remains for Cornell to introduce an Indian prince to American athletics. He is Maharajkhmär Victor Nitendra Narayan, son of the Maharajah of Cooch Behar, India, The new student, who hopes to make a name for himself in American college athletics, has registered in the College of Agricui-ture, and will take a course in that de-partment preparatory to practical work in India, where his father is the owner of some 40.000 acres of tobacco land. Judg-ring from the East Indian's comments on sports, he appears to be not only well in-formed, but very enthusiastic over ama-teur athletics. According to his own statement, he has played association football in India, cricket and Rugby in England, and un-ful agines he would like the national game of the agines he would like the national game of the source of the course in June 1 is reported that he is not satisfied with condi-tions at the A. C. He thinks there is to a the A. C. He thinks there is to a the the is not satisfied with dondi-tions at the heas the is not satisfied with dondi-tions at the heas the of a there is the opport the is not satisfied with dondi-tions at the heas the is an the sature is any interesting and resume his law studies, and the proper athelices yirit there and suggests that at least \$2,000 should be the state for a theories if the dondi-tions at the heas the dia for a theory is the dondi-toons at the tax theory is the dondi-toons at the the tax theory is the dondi-toons at the the the theory is the dondi-toons at the the theory is the dondi-toons at the heas the dia the state with the should be and the should be and the should be and the should head the should be and the should

America as well as our intercollegiate football play. It is said he hus asked the manager of the football team to enroll his name as a candidate for the Corroll eleven. There is one thing certain if his royal highness expects to make a name in baseball, he must consent to have his name shortened. The rapid American student would never waste time yelling "slide you Maharajkimar," etc. Probably they will call him "Mah" if he makes good.

# THE FIGHT GAME.

THE FIGHT GAME. March 26.—Jim Barry vs. Hank Grif-filn, ten rounds, at Waukegan. March 15.—Harry Lewis vs. Terry Mar-tin, fifteen rounds, at Baltimore. March 30.—Dick Hyland vs. Preddle Welsh, ten rounds, at Milwaukee. March 31.—Jke Attell vs. Battling Nel-son, fifteen rounds, at San Francisco. March 31.—Jimmy Walsh vs. Al Del mont, twelve rounds, at Boston. April 2.—George Memsic vs. Phil Brook, ten rounds, at Los Angeles. April 6.—Jack Johnson, vs. Jim Barry, ten rounds, at Milwaukee. April 1..—Packey McFarland vs. Jim-my Britt, twenty rounds, at San Frân-cisco.

## TEN FAST ROUNDS.

Jim Flynn and Battling Johnson Fight A Draw. Los Angeles, March 24.—Jim Flynn of Puebele, Colo, and Battling Johnson of San Francisco fought ten of the fiercest rounds ever seen in this city before the Pacific Athletic club tonight. The fight was a draw, the advantage passing from one man to the other half a dozen times in a single round. Johnson surprised the crowd by his gameness and his eagerness to carry the fight to his opponent. Flynn showed more cleverness and a series of short rushes nearly carried Johnson off his feet. Johnson, with an occasional left and stiff uppercuts in the clinches, staggered his opponent in nearly every round, but the Pueblo fireman showed an equal amount of strength and some-what more of an inclination to come to close quarters. A Draw.

## INTERNATIONAL CHESS.

Vienna, March 24.—In the second round of the international chess masters' tour-nament today Marshall and Swiderski won their respective games against Salwe and Berger by sacrificing a piece each. Rubenstein and Schlester now lead with two games each.

### WITH THE CUE.

New York, March 24.—In exhibition games of 15.2 balk-line billiards played here this afternoon and tonight both slosson and Sutton defeated Cassignol. In the Hoppe-Schaefer match tonight Hoppe won by 400 to his opponent's 306.

Chicago, March 24.-Demarest defeated Conklin in the amateur billiard tourna-ment play tonight by a score of 400 to 231.

Owing to the illness of H. A. Wright of San Francisco, the match scheduled for tomorrow night has been postponed until Thursday. Conklin will meet the Pacific coast expert that night. WITH THE BOWLERS.

Rumor has it that Coach Walker of the Aggles is to leave Logan when his term expires in June. It is reported that he is anxious to return to the Chicago University and resume his law studies, and that he is not satisfied with condi-tions at the A. C. He thinks there is not the proper athletic spirit there and surgests that at least \$2,006 should be tions at the A. C. He thinks there is not the proper athletic spirit there and suggests that at least \$2,006 should be set aside for athletics. If this is done the chances are Walker would stay. The annual squabble over the U.-A. C. football game has been started, Maddock and Walker can not agree, apparently, on the date or place for the annual grid-iron struggle. Walker wants the game in Logan and Maddock insists that it be played in Salt Lake. ITALIAN CAR RETURNS. Reaches Ogden on Freight Car for More Repairs. More Repairs. The Italian car in the great automobile race reached Ogden last evening from Kelton, 90 miles west of that point The car was returned by freight for repairs. The machine met with an accident and a beam was broken. This will cause con-siderable delay and there is a probability that the French car and the German ma-chine will overtake the Italians at Og-den. The accident to the car was caus-ed by failure to see a big boulder in the road. The auto hit the boulder and the beam was broken.

salories the food value of its proteid; the "longitude," food value in fat, and distance from the hypothenuse, value in carbonhydrate, serving each food in portions of two calories of food value, or some multiple, a weighted pin for each portion is placed on the map. The weights represent the food value of the ration, their positions show the percen-tages of proteid, fat and carbohydrate, and when the basket is allowed to swing freely a pointer indicates on the map the center of gravity of the pins. The map is so gaged that a properly balanced ration will bring the center of gravity within a charted "nor-mal rectangle." In a trial of five months, inthe students were guided largely by appetite, and by noting the indications of the map were able easily to vary the dies so as to reduce the pro-teid to a standard set as desirable.

Investigating the effect of compress ed air on health, two British engineers have shown that a pressure of 92 pounds per square inch-more than six atmospheres may be endured without unpleasant results. The pressure must be taken off at a uniform rate, how-ever, at least 20 minutes being allowed for each 15 pounds of reduction, and capillary circulation in the body must be kept up by muscular exercise during compression. Slight temporary neuralgic pain in the arms was the only ill effect of the great pressure.

That earthworms as well as squtr-rels may aid the forester is the novel suggestion of an American naturalist. Dry maple seeds are drawn into worm burrows, where they sprout, and it is believed that some of hem must sur-vive in favorably moist seasons.

The new miners' lamp of Santa and Spelmans, of Brussels, is designed to give warning of danger, and is based on the principle that a flame like that of benzine remains constant in size and brightness under constant in size and brightness under constant conditions, but is increased by such a gas as fire-damp and reduced by carbonic acid. The lamp has a protective casing of wire gauze provided with eternal cool-ing ribs. It is surmounted by a re-fractory chimney, through the opposite sides of which pass the elements of a thermopile, and any variation of curthermopile, and any variation of cur-rent is shown by a galvanometer in connection with these elements. If the flame is made larger and hotter by the presence of fire-damp, the therby the presence of fire-damp, the ther-mo elements are affected, an increase of current intensity being indicated by the galvanometer needle. Carbonic acid gas, reducing the flame, is similar-ly signaled by a reduction on the gal-vanometer scale, and a recording ap-paratus connected with the galvano-meter may be made to keep a record of the varying conditions in different parts of the mine's workings.

parts of the mine's workings. The electric arc from the incaud-scence of carbon electrodes converts into light only about one per cent of the energy, and the so-called "flaming arc" is an attempt to gain efficiency by adding to the carbon substance that produce a luminous flame. Reporting the latest results, Prof. A. Blondel, the French electrician, states that salts of the calcium group have proven suitable materials. The pure chemicals may be used for electrodes or employed in a homogeneous mixture with carbon, but electrodes of carbon with a core of the chemicals have advantages. A lamp with such electrodes, giving a powerful light, has much greater efficiency than any other. The quality of the light may be varied, but the elements of the calcium group are best to use, as they not only give out red and yellow rays but are freer from ultra-violet radia-tions than the iron or titanium arcs.

# **Avoid Secret**

# **Stomach Remedies**

Because Most of Them Contain Dangerous Ingredients, Which Produce the Drug Habit.

Thousands of people, having dyspep-sia or stomach troubles in some form, continually "dope" themselves with all sorts of secret tonics, drugs, wills entherrise stor which per only pills, cathartics, etc., which not only inflame and irritate the stomach and intestines, but in many cases cause the opium, morphine and cocaine habits. You have a right and should de-mand to know what any medicine contains before you take it, unless it is put up or recommended by some rep-utable physician. Fakes and quacks utable physician. Fakes and quacks will put most anything into their sec-ret preparations, to make you like their useless stuff so as to want more of it, until it makes you the victim of some drug habit, which will ruin your health in a short time. Stuart's Dyspepsia Tablets are not a secret remedy, they do not contain a secret remedy, they do not contain injurious drugs, and they are recom-mended by thousands of physicians in the United States and Canada to their patients for dyspepsia, catarrh of the stomach, and all other stomach trou-bles resulting from improper digestion of food. These wonderful tablets actually di-gest food because they contain the very elements that are required of a healthy stomach to properly digest food, thus acting as a substitute and giving the overworked digestive or-gans a rest and a chance to regain their former health, strength and vig-Stuart's Dyspepsia Tablets contain fruit and vegetable essences, the pure concentrated tincture of hydrastis, and golden seal, which tone up and strengthen the mucous coats of the stomach and increase the flow of gas-tric and other digestive juices; lactose (extracted from milk; nux, to strengthen the nerves controlling the action of the stomach; bismuth to ab-sorb gases and prevent fermentation, and pure aseptic pepsin (gov. test) of the highest digestive power. All of these are scientifically incorporated in these tablets or lozenges and consti-tute a complete, natural, speedy cure for any stomach trouble. Stuart's Dyspepsia Tablets are sold in large fifty-cent boxes, by all drug-gists. Stuart's Dyspepsia Tablets contain Write us for a free sample package. Write us for a free sample package. This sample alone will give you suffi-cient relief to convince you. Address F. A. Stuart Co., 150 Stuart Bidg., Marshall, Mich. D D D D

# **Count the Cream**

You would all eat Mapl-Flake if it cost 10 cents per package. You would all want our maple flavor -our perfect cooking-were it not for that five-cent difference.

# But what if Mapl-Flake is 15 cents?

Figure the whole cost-the food and the cream together. Cream costs as much on poor food as on good food. See how little you save.

You want Mapl-Flake because it tastes best. But that is of least importance. The vital fact is that Mapl-Flake is cooked best.

# Our process requires 96 hours.

That is four times as long as it need take-four times as long as it does take some others. There is where our extra cost comes in.

But all of the wheat is thus made digestible. By a shorter process it is not.

Starch, to be digestible, must be made soluble. The particles must be separated for the digestive juices. That requires proper cooking.

So our wheat is steam-cooked for six hours, then cured, then flaked, then toasted 30 minutes at 400 degrees.

That process is expensive, but it is necessary, else we would not employ it. For without it we could give you Mapl-Flake at 10 cents.

We boil our wheat in pure maple syrupthe source of our delicious flavor. That is less important to you, perhaps, than it is to a child. It induces a child to like the food that is best for it.

Wheat is the perfect food-Mapl-Flake its perfect form. But the deciding point with a child, you'll find, is the maple sugar flavor.

The only food served in individual packages in hotels, clubs, cafes, and on dining cars.

NGRAVING

SP TEM

# SCIENTIFIC MISCELLANY.

SCIENTIFIC MISCELLANT. In the curious case recorded by Dr. Vaughan Pendred of Coventry, Eng-land, a bright lad of 6, who has been making rapid progress with his pen and is proud of his success, writes with equal facility forward or backward. When acting by himself, he begins at the right hand side of the paper and writes to the left. From copy he writes normally, but, on being asked, declares that the "mirror-writing" is the correct form. Such writing seems to be less rare than is supposed. Among several hundred persons in good health a medi-cal investigator some years ago found more than 5 per cent to whom mirror-writing was natural, but it appeared that these persons were either left-handed or temporarily using the left hand. In a mirror the left hand re-versed writing of right-handed persons showed the usual characteristics of handwriting. The peculiarity is espe-cially common among expert penman, and seems to be still more frequent in nervous and cerebral disease. An at-tempt was made to explain it by the bilateral action of the brain. The right hand is normally guided by the left exceptral cortex, and it was shown that if this instead of the right cerebral cor-tex should primarily control the left hand, that hand would write backward. The puzzling phenomens of the

The puzzling phenomena of the earth's atmosphere—especially those of the aurora—are found by Svante Ar-rhenius to be best explained as effects of solar dust. The influx of such dust would be greatest when the sun is most active, and it is then that aurorae and magnetic storms—attributed to the dust when electrified—are most numerous, and clouds also are especially abundant. Jupiter shares in the dust, becoming lighter in hue in sunspot maxima, ow-ing to increased cloudiness.

The air is found by Prof. Miquel of Montsouris to contain most microbes at 9 in the morning and 9 in the evening; fewest at 3 in the morning and 3 in afternoon.

The mechanical diet indicator of Prof. Irving Fisher, of Yale university, is designed to show automatically the proteid, fat and carbohydrate in any distary, and it not only indicates the proportions but also points out the eas-est way to bring the ration up to a given standard. The machine consists of an iron upright nine inches high, from which is suspended a basket hold-ing a card printed with a right-angled triangle as a "food map." Each individ-ual food has its own location. The "iatitude" of any food represents in
