

DRY FARM EXPERT IN NEW ORLEANS

F. D. Farrell, Government Agronomist, Tells of Work in West.

DOUBLE WHEAT GROWING AREA

The New Orleans Playmate recently published an interview with F. D. Farrell, government dry farming expert.

In regard to dry farm conditions in the west, Mr. Farrell is a son of George L. Farrell, the veteran dry farmer of Cache valley and is a graduate of the Utah agricultural college.

The system of dry farming which is being used in the west will be the means of doubling the wheat-growing area of the United States within the next 20 years, said Mr. F. D. Farrell.

Mr. Farrell has been at work for the past year in the west looking into the possibilities of the dry farming, and is now on his way to Washington to make his report.

The system is proving a great success and what was once desert land, growing nothing but cotton and sugar, now is producing from 15 to 50 bushels of wheat per acre.

Land that was once considered worthless, now can be purchased for \$10 an acre, and went begging at that price is now selling for \$50 an acre, and is considered cheap.

Little Soldiers

In your blood are the millions of corpuscles that defend you against attacks of disease. To make and keep these little soldiers healthy and strong, is simply to make and keep the blood of the right quality and quantity.

This is just what Hood's Serravallo does—it helps the little soldiers in your blood to fight disease for you. It cures scrofula, eczema, eruptions, catarrh, rheumatism, anemia, nervousness, dyspepsia, general debility, and builds up the whole system.

It offers the wonderful serravallo principle because it contains arsenic, not simply because it contains arsenic, but because it combines the utmost remedial values of more than 20 different ingredients, and is just as easy to prepare and take as it is just as good. You may be sure it is inferior, costs less to make, and yields the dealer a larger profit.

opportunities offered to American manufacturers and merchants by the development of this near-by Mexican territory. He says:

The company owns some 2,000,000 acres in northern Tamaulipas, bordering on the Rio Grande and San Juan rivers, and has received a subsidy of about \$5,000,000 from the Mexican government to be used in the development of this tract and for the establishment of irrigation plants and the purchase of machinery.

As a result of a recent inspection by prominent men interested in the project it is believed that they will first attempt the establishment of a large tract of land similar to the one at San Benito, Tex., and active work will probably begin in January, 1921.

Mr. Farrell said another problem that the government was trying to solve was the conservation of the rainfall for the purpose of getting sufficient water for the stock.
