

POWERFUL ELECTRIC LOCOMOTIVE.

Double Ended Motor for Hauling Heavy Passenger Trains that is a World's Record Breaker—Ten Cars Can Be Hauled At a Speed of 70 Miles An Hour.

THE most powerful electric locomotive in the world has just been completed for the New York Central & Hudson River Railroad in the shops of the General Electric Company and the American Locomotive Works at Schenectady, N. Y.

This locomotive is one of between 20 and 30 which will be used by the New York Central & Hudson River Railroad company for hauling the through passenger trains within its Electrical Zone from Grand Central station through the Park avenue tunnel to Croton on the main line, a distance of 34 miles, and

double ended and symmetrical in construction, so that it can be run in either direction with equal facility. The locomotive has four driving axles, and pony trucks at each end. Each driving axle carries without intermediate gearing the armature of an electric motor having a normal rating of 500 H. P., and capable of developing much greater power for short periods. This locomotive is, therefore, capable of developing greater horse power than any steam locomotive.

EXAMINE YOUR DENTIFRICE.

Acid and grit, deadliest enemies of the teeth, abound in cheap dentifrices. Fine perfumes do not make fine dentifrices. Your teeth deserve better of you than to be offered up a sacrifice to your pocketbook.

SOZODONT

Is of proven value. Sixty years is a pretty good test. No acid, no grit in Sozodont. The Liquid penetrates the little crevices and purifies them; the Powder gives a bright and polished surface.

is equipped for both straight and automatic air braking, signaling and electric air heating, air sending device, electric air compressor, etc., being as complete in every way with respect to operating devices as a steam locomotive.

The Sprague-General Electric Multiple Unit Control is used, the motors being connected four in series; two groups of two in parallel series and all four in parallel. To facilitate running in either direction there are two master controllers, one at each end of the central cab, so located as to best enable the engineer to observe his track and signals. The controllers, reverser, regulators, etc., are located in the cab extensions on each end of the central cab.

There are four third-rail contact shoes in parallel on each side of the locomotive, and on top of the cab are also contact shoes for use in special places where an overhead conductor may be desirable.

CROWDING OUT THOUSANDS OF DOLLARS WORTH OF WINTER MERCHANDISE! A TREMENDOUS, SWEEPING SUCCESS!

OUR GREAT JANUARY CLEARANCE SALE!

6 more days of this sensational price cutting. Every item in the store slashed to the lowest notch this week because we must clear out all winter stocks to make room for incoming spring merchandise, and we've made prices that will do it.

BARGAINS THAT OUTDO ALL COMPETITION. JUST COMPARE!

Printer's ink and flowery speeches are well enough in their way but even these cannot do our great values justice. For your pocket-book's sake make a personal investigation and be convinced that price for price we undersell them all. No half hearted cutting here, we've started out to do the biggest "sale" business in our career and we're doing it; we have to keep up the marvelous surprising pace we struck last week and if Price cutting and bargain giving will do it there will be a continuation of the store-crowding throughout this entire week.
