# MINING, BUSINESS AND STOCKS

# HEAP-ROASTING BINGHAM ORES.

The Bingham Consolidated Will Try This Plan of Removing Sulphur Fumes.

## TO SAVE VALLEY VECETATION.

Demonstration to be Made at the Dalton & Lark Mine - Preparations Now Being Made.

An arrival from Bingham has brought in the information that the Bingham Consolidated Mining company is going to try the process of heap-roasting its sulphide copper ores as one means of eliminating the poisonous gases which, it is charged, is responsible for the devastation of many farms in the valley and causing the demise of livestock. It is understood the Bingham company has preparations well under way and that fires will be kindled under several large heaps of ore within a very short time

heaps of ore within a very short time—probably next week.

This will be the first time that this plan of removing the sulphurous fumes from the ore has ever been attempted in the nearby copper camp and if it can be carried out to a success, it will probably go a long way towards removing the contention now existing between the farmers of the Sail Lake valley and the smelting companies. With the ore roasted in camp, there would be a decided lessening in the density of the fumes coming from the stacks at the present time and, with the devices being installed at the smelter at Bingham Junction, the chances are that they would be so far removed that the grounds around the smelters could be made into a veritable graden spot

smelters could be made into a veritable garden spot.

Undoubtedly, the fumes arising from the burning heaps would destroy every vestige of versetation in the vicinity of the heaps; but this would amount to nothing, as the mountains are barren of any timber hence nothing of any particular value grows-there.

General Manager McVichie being in Denver, no statement regarding the proposed plans could be obtained from him, but the demonstration will be car-

him, but the demonstration will be carried out near the Dalton and Lark properties and sulphide ore from the Brooklyn mine will be used.

## ON MINING EXCHANGE.

Trading Dull but Prices of Some Stocks Were Stronger.

was not much life to mining There was not much life to mining stocks during today's early calls. Trading was slow, but notwithstanding this there was a noticeable stiffening in some directions. May Day and Uncle Sam Consolidated of Tintic were both higher and recorded sales at an advance. New York Bonanza did likewise. Wabash seems to have some suppor

again and as much as \$1.70 was bid for it, while offerings were made at The closing quotations and sales

# SMOKE PROBLEM IN CALIFORNIA.

The Government Takes a Hand to Prevent Destruction of The Forests

# AROUND KESWICK, SHASTA CO.

Injunction Against Mountain Copper Company - Complaint Made About Fumes from Selby Plant.

The smelter smoke problem is causing trouble in California and it would seem that the Utah smelting companies are not the only ones that will be obliged to figure out some remedy whereby the safety of vegetable and animal life may be preserved.

tific Press, the United States Circuit

court has issued an injunction restraining the Mountain Copper company from further damaging the forests in the vicinity of Keswick, Shasta county, Cal. "This suit," says the publication, "has been dragging along for several years with the result that the government has finally secured a victory, but it is a victory of questionable value. The forest about Keswick consists The forest about Keswick consists chiefly of scatering nut pine, brush and a few oaks. That the smelter fumes have injured this sparse and stunted growth of trees there is no doubt, and, also, the contention of the Mountain Copper company that the damage was relatively slight is, without doubt, true, but evidently a principle must be upheld, and, as a result, the town of Keswick, with all of its prosperity and diwick, with all of its prosperity and di-versity of commercial interests, is doomed. The Mountain Copper company has given employment to more than 1,000 men at its smelters, and a single monthly wage paid to these men would pay for all the timber situated within the one in any manner affected by the smelter fumes. The plant at Keswick is a large one and contains a complete and extensive equipment. There are five water-jacket furnaces, having a combined daily capacity of nearly 2,000 tons. There are 11 calcinhearly 2,000 tons. There are 11 calcining furnaces, three converters, and a large amount of other machinery Thousands of tons of ore have been heap-roasted in the past, and the fumes from these heaps, as well as from the stacks, has afforded numerous opportunities for complaint on the part of small formers who will now find that they formers who will now find that they have lost the only market for their products which they have had for years. The works have also afforded a market for the gold-bearing siliceous ores of the district, but with the closing down of the works which will probably follow this recent court decision, Shasta county will have lost a most important. county will have lost a most import-ant factor in its commercial life.

"Within a few days it has been re-ported that money has been subscribed with which to carry on litigation against the Selby Lead & Smelting Co., whose works are at Vallejo Junction, in Contra Costa county, Cal. The principal complainants are said to be the residents of the vicinity of Benica, in Solano county, on the opposite side of the Straits of Carquinez, and six miles distant in an easterly direction. The Selby works have been in operation there for many years, and it would seem that the discovery has just been made that the fumes from the stacks are injurious. The only method as yet pointed out by which the various smelting companies of the west may hope to continue business is that they may engage in the making of sulphuric acid as a bi-product of their smelting operations. This is entirely practicable, but it involves a large outlay of capital for plant, and considerable excapital for plant, and considerable expense thereafter in carrying on the acid making. But after having made this great quantity of acid there will be no market for it which can be reached by the manufacturers where the product would bring a price which would even pay for the cost of manufacture. It has been suggested that the acid could be employed in the leaching of partially roasted ore, thus saving the expense of smelting. It is not a difficult matter for one with a knowledge of chemistry to work out scientific processes on paper, but the business of mining and smelting of copper ores is not conducted for the purpose of demnot conducted for the purpose of dem-enstrating scientific theories, nor even facts, but for profit, and when no pro-fit results from the operation the proposition usually comes to a standstill

## MINING IN LA SALS. Outlook for That Section Never Looked

Brighter Than Now. The outlook for the La Sal mining district is much brighter than at any time during its history, says the Moab Times. This is not because a large number of prospectors are at work in the district, but because the pioneer surface scraping, staking period, through which all successful mining sections must pass, is evidently over. Interests have been now acquired by men, who realize that it takes a small fortune to make a good pros-

The Derigo-International consolidation of the fine prospects in Beaver Basin has been accomplished and Bos-ton capital, sufficient for all purposes of development, has been guaranteed for this summer. The Sinbad valley properties which have lately been acjuired by an eastern corporation, will have a reduction plant in operation there during the coming summer. This property is undoubtedly as rich a silver-copper mine as the famous one in La Sal canyon. This latter property after several years idleness caused by litigation, is now out of those troubles,

litigation, is now out of those troubles, and the men now in control are working a good force of men opening up new ground, a property like this which has produced over a half million dollars worth of silver and copper, and hardly yet been prospected, is not likely to be forever abandoned.

Rico and Telluride mining men who have been seeking to bet control of properties laying across Mineral and Pilot mountain section through which the vein from which the famous Wilson Mesa float came runs, are likely the vein from which the famous Wilson Mesa float came runs, are likely to succeed, which means the commencement of some heavy mining. The tunnel under the east of mineral mountain, which was arranged for last year, will undoubtedly, be undertaken this season. The Grouse Mt. Co, which expast three years, and whose principal owners reside in West Virginia, write their superintendent, W. R. Wheat of Moab, that a number of the directors will be out early in the spring and arrange for further work.

range for further work.

These are only a few of the active propositions that are in view for the

# DOWNWARD TREND OF STOCKS CHECKED

While Changes Were Small There Were Some Rather Heavy Dealings.

## SELLING FOR BOTH ACCOUNTS.

Early Break in Prices - Rally Later Resulted in Recovery of Losses.

New York, March 23.-The regular open-

ing in stocks today marked a partia check to the downward tendency with

which the market closed last night,

Changes were generally small, but there were very heavy dealings in some stocks,

notably in Pennsylvania and Union Pacific. There were 6,000 shares of the latter sold at the opening at 128 and 128%. compared with 128% last night. Pennsyl-According to the Mining and Scien-

compared with 12% last night. Pennsylvania opened unchanged and then hardened a fraction. There was a rise of 14 in Colorado Fuel. Northwestern ran off 2 points and Tennessee Coal lost about a point. Apparent support for some st.cks held the market for a time and prices were bid up above yesterday's closing all around the room. Pennsylvania was taken in enormous blocks at 141 before giving away. St. Paul, Delaware & Hudson, Consolidated Gas, Metropolitan Securities and Twin City Rapid Transit gained 1 to 14. Large selling for both accounts was resumed later and the entire market soli lower than at the opening. Louisvide and Nashville, the Smelting stocks, Virginia and Carolina Chemical stocks and Allis-Chalmers preferred declined 1 to 14, and New York, Chicago & St. Louis second preferred 3. Speculation was steadier in tone at 11 c clock, but was becoming quiet. New York. Chicago & St. Leuis second preferred 3. Speculation was steadier in tone at 11 o'clock, but was becoming quiet.

Prices broke sharply again in the second hour, the special weakness of Union Pacific made a bad impression on sentiment. That stock was forced down 1% and the railied 1%. The sudden declines in special stocks followed by railies indicated activity by bear operators to force prices down. Vulnerable spots were found chiefly among recent favorites on the advance, both in the railroad and industrial lists. The Pennsylvania group and Atchison were relatively firm. Suthern Pacific, Rock Island, New York Central, Ontario & Western, Reading, Atlantic Coast Line the Toledo, St. Louis and Western stocks, Duluth and South Shore, the Southern Iron stocks, the railroad equipment stocks and a number of specialities suffered losses of a point or more, Allis-Chalmers preferred lost 3½ and Pitsburg, C. C. C. & St. Louis 3. A vigorous raily was in force at noon with many stocks higher than before. Colorado Fuel rose 2% over last night and Tennessee Coal 2.

Bonds were irregular at noon.

The noon raily was extended until the market had recovered all of its earlier losses. In many instances prices ruled above yesterday's closing, particularly for the active specialities.

Realizing sales made but little impression on the market, although the volume of purchases perceptibly diminished as prices advanced. Union Pacific recovered all of its loss and such favorites as St. Paul, Pennsylvania, Atchison, New York Central, Amalgamated Copper, and the United States Steel stocks soid a fraction over yesterday's closing. Baltimore & Ohlo, Canadian Pacific and Distillers Securities moved up 1 and Reality 2 points. Colorado Fuel had increased its rise to 4 points by 2 o'clock American Express and Colorade & Scuthern second preferred declined 2. Chicago Union Traction preferred 21%, New York Airbrake 4%, and Federal Mining 5.

# TEA

We are not a tea-drinking people; we should be steadier, if we were.

# LOCAL MARKETS.

In today's local markets, pineapples have fallen slightly and may be had for 30 and 40 cents instead of 40 cents fist. Utah potatoes are also falling in price because of the advent of new potatoes from California, Florida and Cuba. California tubers, asparagus and grape fruit are arriving in generous quantities, and later in the week there will arrive fresh instalments of Florida tomatoes, two cars of oranges, a car load of bananas, and other things. Oranges this season, are unusually a car load of bananas, and other things. Oranges this season, are unusually juicy and the flavor is fine; but the wet season has left the fruit poor for keeping long. Salmon is a little scarce on account of the heavy coast rains which have muddled up the streams. Prices obtaining today are as follows:
