

school has been arranged in courses leading to graduation.

Following is a summary of the class work:

	First Semester		Second Semester	
	No. of Classes	Students	No. of Classes	Students
Theology.....	6	245	6	220
Rhetoric.....	2	73	1	45
Grammar.....	3	188	3	153
Elocution.....			1	62
Reading.....	3	95	1	76
Orthography.....	2	82	1	30
Arithmetic.....	3	220	3	191
Algebra.....	2	23	3	30
Geometry.....	1	5	1	10
Book-keeping.....			1	64
Psychology.....	2	15	1	9
Logic.....			1	17
Physical Geography.....	1	34		
Geography.....	1	115	1	102
Domestic Science.....	1	20		
Physiology.....			1	26
Hygiene.....	1	19		
Botany.....			1	24
Civil Government.....	1	28		
Political Economy.....			1	20
General History.....	1	14	1	14
U. S. History.....	1	26		
Latin.....	1	10	1	5
Spanish.....	2	9	1	4
German.....	2	21	2	21
Vocal Music.....	1	50	1	45
Instrumental Music.....	1	2	1	1
Fine Arts.....	1	8	1	6
Drawing.....	2	40	2	40
Penmanship.....	3	150	3	131
Callisthenics.....	1	59		
Object Lessons.....	1	30	1	25
Theory and Practice.....	2	31	2	48
Commercial Law.....	1	42	1	8
Phonography.....	1	17	2	12
Educational Systems.....	1	4		
Philosophy of Education.....			1	4

Of the students attending the College 3 have completed the preparatory course, 4 the normal, 7 the second year of the normal, 9 the first year of the normal, 10 the business course, and 2 the second year of the literary course.

In addition to the courses here named, one in science and one in mathematics were provided for, for neither of which there have been applicants. The establishment of these courses has been merely a temporary arrangement, and a slight change has been made for the next year, which will not, however, interfere with the progress of those who have been pursuing the courses of this year.

In response to the earnest solicitation of the State Presidency of the Y. L. M. I. A. a five weeks' course of instruction in the work of the Guide was instituted. The class was organized as an association, and regular work was conducted under the direction of the undersigned. To this was added a series of lectures on topics of interest to the ladies. A great deal of interest was created by this course, and the benefits derived therefrom will be shared equally by the Young Ladies' association and the college.

A number of valuable works have been added to the library through the courtesy of Hon. Joseph L. Rawlins, delegate to Congress. The following periodicals have been furnished the reading room:

DESERET EVENING NEWS, Salt Lake Herald, Ogden Standard, Provo Dispatch, Wasatch Wave, Richfield Advocate, Woman's Exponent, Contributor, Juvenile Instructor, Young Woman's Journal, Inter-Mountain Educator, and B. Y. A. Business Journal, donated by publishers; Puck donated by Margetts Bros.; Judge by Utah Book and Stationery Co.; Public Opinion, Literary Digest, and North American Review, purchased.

In addition to the regular and special instructors of the institution the following have favored us during the year with lectures: Elder George Reynolds, Book of Mormon; Elder David McKenzie, Bible Evidences; Lieut. R. W. Young, Commercial Law; Elder James H. Anderson, Manxland. Most of these lectures were delivered before, the regular classes, but some were given in the sessions of the Students' Society, which were held weekly until the close of the first semester, when they were temporarily suspended, on account of the course of light science lectures in the Church University.

While serious discouragements have attended our work in some directions, we feel to acknowledge our gratitude to the people of the Territory, and especially of the Salt Lake Stake for their rallying to the assistance of the college in the matter of attendance. Our record of 282 regular students, in addition to the forty-two who took the young ladies' course, exceeds our annual attendance for several years past. Notwithstanding the raising of the standard of courses, we are able to announce with much pleasure the graduation of four students in our full normal course, the first in the history of the institution; while excellent progress has been made by some students along the other courses. Despite the darkness of the times, a ray of light has been shed upon the institution, illuminating its course to the successful issue of the year. To God we are indebted for the light, and to Him we trust for its continuance and increase.

WILLARD DONE.

WEATHER AND CROPS.

George N. Salisbury, U. S. Weather Bureau director, issued the following bulletin last night:

One farmer called the past week "An ideal week of growing weather," and the general tenor of reports was to the same effect. It was, throughout, quite warm for the season; and the warmth, combined with scattering showers on May 29th, 30th and June 1st, gave to vegetation a decided impulse. At this time of year Utah farmers depend upon an artificial supply of water almost wholly, but it is a great saving of water and help to crops if occasional showers occur.

In the earlier localities winter wheat and rye are headed out. Barley will be headed in another week. Alfalfa is nearly everywhere quite tall and heavy. It is blossoming now, and on the drier lands the cutting of it has begun.

Corn and potatoes have come up well, and are big enough to be plowed. In Utah county farmers have finished thinning out their sugar beets. Strawberries are ripening, and some were shipped last week.

Although water has become scarce in some places, yet, on the whole, it has held out better than was expected.

Box Elder—Maximum temperature, 90; minimum temperature, 58; 1.5 inch rain on 29th. Unirrigated spring wheat and lucern are suffering. Other grain and lucern doing well. Winter wheat heading out. Some grasshoppers hatching.

Cache—Meadows and pastures doing finely. Prospects of good hay crop. Irrigation only begun in gardens, although it will soon be a necessity with grain. In the gardens a kind of fly is eating the plants.

Rich—Severe hail storm on the 26th, but it did no damage. Prospects good for hay and grain. Potatoes just coming up. Maximum temperature, 86; minimum temperature, 38.

Morgan—Shower on the 29th. Very warm. Crops where irrigated are growing fast; where not they are dying out. Lucerne 20 to 24 inches, blooming.

Summit—Max. 92; min. 28. A few light rain showers. Warm days and nights with heavy dew. Heavy shower June 1st. Crops growing fast. Dandelions are becoming so numerous as to be a pest.

Wasatch—Max. 86; min. 36. Rain and hail on 30th, .20 inch. Showers and sunshine since have fairly made the vegetation boom. It has been an ideal week of growing weather.

Uintah—Max. 86; min. 42. Rain of 0.41 at Vernal on 30th. Grain and luceru doing well. Planting is finished. Strawberries are ripening.

Weber—Max. 92; min. 60. Average sunshine 94 per cent. On 29th over half an inch of rain. Crops have not looked better for years. Lucern on high, unirrigated land is being cut. Fall grain on same kind of land is short, but well headed. Strawberries are being picked.

Davis—Spring grain is being irrigated. Alfalfa is beginning to blossom. Strawberries will soon be in the market.

Salt Lake—Max. 89, min. 52, rain 25. Lucern is nearly ready to cut. Spring grain is being watered, and grows very fast. Shower on the 1st.

Tooele—Grain looks well. Strawberries are ripe. First crop of lucern is being out. Wire worm and grasshoppers are doing considerable damage.

Utah—Thunderstorm on the 29th. Crops look well, and growing fast. Some corn and potatoes are big enough to be plowed. Thinning of beets is now finished. Strawberries are ripe. Some were shipped last week.

Juab—Warm and sunny. Grain doing finely. Corn two inches high, and potatoes peeping up. First grain watered on the 2nd.

Sanpete—Maximum, 34; minimum, 48. All crops look above the average, except apples. Frost killed early blooms. Heavy shower on 30th. Water is getting scarce.

Millard—Maximum, 86; minimum, 56. Rain 0.56. Cereals and vegetables are both looking splendid. The earlier crops look best. Lucern in bloom; rye heading out.

Sevier—Grain does not look as well as it would have looked if there had been more water and less wind. Fall rye is two feet high. Wheat is fifteen inches high, and starting to head. Barley will head in another week. Lucern is very heavy.

Grand—Soil wet down six inches by rains of 29th and 30th. All crops are looking well, including fruit. New potatoes are on hand. Strawberries prime.

Garfield—Past week favorable; showers helped all crops. Too dry before.
