### ON WEST SIDE OF LAKE.

Giant Coppper Queen Properties Showing Up With Some Good Ore.

Development work still progresses favorably on the diant Copper Queen Mining company's property located on the west side of the Great Sait Lake and those in charge express the confidence that a good pro-ducing mine will soon be opened there. James M. O'Brien, formerly connect-d with the Amalgamated properties in Montana, recently paid a visit to the camp and returned quite enthusiastic over the possibilities of the property

and the district in general.

The Glant properties consist of 205 acres of ground, Mr. O'Brien states, and adjoin the well known Copper Mountain mine, owned by the Lewis-

hown brothers. ledge penetrating the ground of the later has a southeast course and becomes very prominent at the northwest end of the Copper Queen No. 4, which is the northwest claim of the Giant Copper Queen's property. The ledge at this point has a width of about 40 feet, and increases in width until the Copper Queen No. 2 is reached, and continues this width through claims Nos. 1 and 5. The management has wisely selected an ideal place in the wisely selected all ideal place in the center of the claims for systematic and cheap mining by commencing on the cast side and cross-cutting the ledge at a depth of 75 feet with the specific intention of upraising to surface and sinking at the same point, thereby giving splendid air course for ventilation at this level, and assuming the ledge will continue its present width of 40 feet, it will thereby expose 120,000 tons of copper and gold ores, valued, it is conservatively estimated, at \$35 per

The cost of mining, transportation exceed \$15 per ton. The company was incorporated several weeks ago with C. E. Dugger napositiont and manager, and M. H. Redding, secretary.

#### BUTTE'S COPPER MINES.

this Year Promises to be a Record bryaker for Muntana Camp.

This year promises to be one of the out presserous it the bistary of cop-r coloning in flutte, says a corresponont of the New York Commercial Bury both EINDING the recent of Utimities full forces of And ork man are weighing in the minure of the case of the case, and that biomenant culture the property, shown by the met that the bitte, Alan apocinty.

conda & Pacific and the Great North-ern rallroads are taxed to their utmost to handle the numerous trains of ore being transported from this city to Anaconda and to Great Falls.

The Washoe copper smelters at Ana-conda are working full blast. Every 24 hours in the neighborhood of 6,000 tous of ore is concentrated, smelted and reduced to copper ingots. Prior to the general suspension of the Amalgamated Co,'s properties in Montana, the monthly production of the Washee plant eclipsed the world's record, and, according to unofficial opinion, the output next month will establish a new record. About 2,000 men are employed at the various departments of the reduction works, and in the course of several months, when it is expected to have the arsenic-saving plant in operation, em-ployment will be afforded to many

Within a few months the new smelter of the Pittsburg Co., located on the flats below the city, will be in full swing. Already the company is securing pyritic ore from various mining districts in the state to use as flux in the reduction of copper ore from the Butte properties. The capacity of the new plant will be in the neighborhood of 800 tons a day and the works are designed with a view. and the works are designed with a view to increasing the capacity of the smelt-er at any time the output of the mines

An interesting evolution is taking place on the famous Anaconda hill. The remarkable prediction is made that in the course of five years, the Anaconda hoist will be on a level with the Never Sweat mine, many feet lower. This change is being effected on account of the fact that the men are constantly engaged in cutting off the surface for the purpose of filling the miles of worked-out stopes. The big dumps of waste rock which were made from the Anaconda mine in the early history of the development of that properly

have been put back into its depths.

Eventually, Anaconda hill will become, it is believed, almost a foot-hill in size, if the top of the hill is to replace the miles of space from which innumerable tons of ore is being extracted day

AS TO THE COPPER SLUMP. Eastern Authority Believes Prices Wil Go Higher Again Soon.

For the first time since the new year began the copper market has been dis-playing some signs of weakness during the past two days, says an eastern authority. This temporary reaction, as it is termed in some quarters, is due almost entirely to the dropping off of the foreign demand which has been very strong since the beginning of De-

cember.

This sudden slackening of the foreign demand has had a rapid effect on the copper market according to published quotations, the price now being below 13 cents, whereas a little while ago all of the producers were talking 14-cent

Notwithstanding this temporary luli In the buying movement it is import ant to note that none of the large copper producers are selling their output for less than 13 cents a pound while re-ports state that one of the large Michi-gan copper companies has refused to sell any coppper for less than 131/4 cents

As illustrating the difference of opinion which prevails concerning the outthat in the optimistic sections, which always are found in close proximity to copper mining centers, 15-cent copper is being seriously talked of for the coming year. It is pointed out that the January price of copper always marks the lowest quotation for the year and to substantiate this argument the following table has been published showing copper prices in January for the past five years in comparison to the quotations made in the subsequent months:

1903, 1902, 1901, 1900, 1899, 

It is reasonable, however, to suppose that the heavy European demand has stocked the manufacturers abroad with considerable copper and no further extraordinary demand from that source can be expected for some time.

The reasons now advanced tending to show an increased consumption for the present year in the United States are largely statistical and based on precand due to the ever increasing capacity of the copper consumption of this coun-try. This tendency has been in evidence for 20 years with an occasional respite so that those interested in mak-

ing copper are not worrying about the New mines are being opened continually and estimating the copper production for 1903 at 717,000,000 pounds the production for 1904 should easily show a record 750,000,000 pounds. These figures eliminate all importations of copper to the United States, which, it is assumed, will not vary to any great extent from the figures for 1903.

ROCCO-HOMESTAKE PLANT. New Hoist in Commission - A Double

Compartment Shaft. The new hoisting plant at the Roc co-Homestake mine in Nevada is in commission and is capable of going to a depth of 1,900 feet. The company contemplates doing this and putting down a double compartment shaft. Funds are available to carry out this

A Thousand Dollars Thrown Away "My wife had lung trouble for over fitteen years," writes Mr W. W. Baker, of Plainview, Neb. "We tried a number of dectors and spent over a thousand dollars without any reilef, She was very low and lost all hope, when a friend suggested trying Foley's Honey and Tur, which I did; and thanks be to this great remedy it saved her life. She is stronger and enjoys better health than she has ever known in ten years We shall never be without Foley's Honey and Tur, and would ask those afflicted to try it." The prevention of consumption is entirely a question of consumption is entirely a question of consumption is entirely a question of fatul lung troubles as Fuley's Honey and Tur. Sole ngents, F. J. # RIPARIAN RIGHTS.

Something to Be Considered by Locators of Oil Lands Along Shores of Great Salt Lake.

### LEGAL ADVICE IS OBTAINED.

Two Utah Cases Quoted-An Understanding of Subject May Avoid Trouble in Future.

Word comes from along the shores of the Great Salt Lake that scores of oil land locations have been and are being made along the lake front, from this city to Promintory Point on the north, upon ground now laid bare by the recession of the waters of the lake, This has caused the raising of the question of "riparian rights" and it is well that "matters of this kind should be understood thoroughly by persons interested in the formation of new com-panies or in the layestment in oil stocks," said a gentleman, one of the first to enter the Farmington field, this

"I believe that if this riparian right question as well as the ownership of such lands is understood by the general public it will save trouble in the future and percent no end of costly litigation. For n.y own information I received legal advice on the subject from Frank E. Gregg, a well known Denver attorney, and if it will benefit anyone else I am willing that it should go into print.

The letter from the Denver attorney contains the following: The supreme court of the United States has settled beyond controversy certain questions relating to this matter, and I find on investigation that my suggestion to you was correct, namely that when a state is admitted into the that when a state is admitted into the Union, the state so admitted becomes the proprietor of the beds of the navigable streams and lakes within the state, and the United States has no further title in such lands. The power or control of the United States after the admission of such state has to do only with matters of commerce and pavigation.

It is also well settled that the "ri-parian" owner, or the owner of the lands bordering on such navagable lakes, takes title only to the margin of the water and becomes the owner of the accretions and also relictions by the recision of the water.
It is also well settled that the "ripari-

an" owner on streams and lakes not navigable takes title to the thread of the stream or to the center of the lake; but as to lakes, some of the cases only carry his title to the extent of a legal subdivision of the land. The supreme court of the United States has several times decided that

on these questions it will follow the rules laid down by the state where the

question arises.

In the case of Pointer vs. Chipman, 8
Utah, 450 (32 Pac. 692), Judge Miner
says: "There is no tide water in this
territory, and therefore no water which,
by the technical meaning of the term
travitorials 'navigable' at common law would come within it. The general meaning of the common law is applicable to inland lakes which are not of such size and importance as to be classed with the great navigable lakes of the country, and we do not consider that we should gepart from the rule in this case. The fact that Utah lake is navigated or navigable does not change the rule in

this case. You will notice that Judge Miner, in the above quotation, says in each in-stance "in this case," and of course the only question before the court in that case was whether or not the riparian owner on Utah lake was entitled to the selections to his land by reason of the waters of the lake receding, or whether he was entitled to ownership of the he was entitled to ownership of the land to the water's edge, and he decided it in conformity with nearly all the decisions that whether the water be navigable or not, the riparian owner is entitled to the accretion and reliction.

In the case of Knydson et el. In the case of Knudson et al vs. Omanson, 10 Utah, 130 (37 Pac, 250), Chief Justice Merritt speaks of Utah lake as a navigable lake, and then, referring to the case of Hardin vs. Jordan (140 U. S. 371) he says: "In the case of Hardin vs Jordan, the doctrine is clearly announced by the supreme court of the United States, whose decision is absolutely conclusive upon this count, that whether the body of water is navigable or not, the practical result is the same, the only difference being that in the case of non-navigable waters the riparian owner takes the fee to the centre of the lake or stream, while in the case of navigable waters the ownership in fee extends only to the water's edge, but in either case all the accretions and relictions belong to him as an incident of his riparian owner-

You will notice that Judge Miner, in giving his decision, indulges in general language from which it might be con-tended that that decision fixes the status of both Utah lake and Great Salt Lake as not being naving'e lakes, and therefore that the title of the riparian owner might extend under the water as gable streams and lakes, but it is notceable too that he suggests in each instance that the announcement of the doctrine he thus suggests is in connec. tion with the particular case being con-sidered, namely; that of accretions and

I have taken it for granted that the ocations made out in the lake were not made in conformity to any state (Utah) aw, but only in the United States landoffice in usual manner on the theory that the bed of the lake was still a part of the United States public domain.

#### CONCENTRATES.

A. C. Milner has gone to New York on a brief business trip. Ed. L. Sheets, the well known broker has gone to California on a brief vacu-

Fred Burbidge, former manager of the Bunker Hill and Sullivan mine in northern Idaho is in the city today, enroute home from a trip east.

The ore and bullion settlements re-

ported late yesterday were as follows: Crude ores and concentrates, \$33,000; base bullion, \$36,700; gold bullion, \$11,-800. Total, \$81,500. The Federal Mining company whose properties are located in Beaver coun-

ty, will patent a portion of its claims this year. Application for mineral sur-veys have been filed. President Bayly of the Copper Belt railway, completed his inspection of

that property yesterday and has de-parted for the east where he will confer with the Bingham Con. directors now in the east. Physical conditions at the New York Bonenza conditions at the New Jork
Bonenza continue to improve. The
west drift on the 400-foot level shows
a nice face of ore. A raise is being
made in the first—chute, encountered

some time ago. The shaft at the Latham mine in the Spruce Mountain mining district has penetrated ore for a distance of thirty feet. The local management is very much gratified over the recent devel-opments. Much of the ore is of high grade lead.

Vivian P. Strange, M. E., has re-turned from a trip to the properties of the Ivers Mining company in White Pine county, Nev., where he was called on professional business. He says a vigorous campaign of development is in progress at the mines mentioned, which have a nice showing of ore.

Operations were resumed after the third eruption at the Guffey-Galey gas and oil well at Farmington this morning. Superintendent W. R. Rumbaugh stated while in the city yesterday that the mud is well nigh knee deep around the derrick. The drillers came into the city on Saturday evening last and rigged themselves out with high tep rubber boots.

## MOST STOCKS MADE LOSSES.

Further Slump in Cotton Was the Chief Reason for a General Decline.

#### MARKET SLOWLY HARDENED.

Secy. Shaw's Notice to Banks of a Call For Movey Caused Some Concessions.

New York, Feb. 4.-Very light opening transactions in the stock market today carried the average of prices a small fraction lower than last night. Because of the further slump in cotton nearly all stocks receded in price. Losses went from 1 to 11/2 in Brooklyn Transit, Metropolitan Securities, Sugar, the Realty stocks, Chicago Terminal preferred and Colorado & Southern first preferred. Delaware & Hudson lost 2, Chicago & Northwestern 21/2 and the preferred 21/4. United States Steel preferred resisted the depression and rose a frection over last night when the market steadled. With the rally in the cotton market, stocks recovered to about last night's level and slightly above in a few cases. United States Steel pre-ferred touched 55%.

Bonds were irregular at noon.
The market hardened slowly to above last night's close, Colorado Fuel gained 1½ and Tennessee Coal 1, in sympathy with the firm tone of United States Steel preferred.

preferred.
The notice from the secretary of the The notice from the secretary of the treasury for the payment of 29 per cent of government deposits in national banks caused prices to fall back a shade. The movement was inconsiderable, however. Pittsburg, Cincinnati, Chicago & St. Louis declined 3% and Westinghouse Electric a point, while Chicago & Eastern Illinois certificates rose 5 and St. Louis & San Francisco second preferred a point.

PRODUCE.

CHICAGO. Chicago, Feb. 4.-Wheat today surpass-

ed the season's high mark, established less than 24 hours previous. There was a wild scramble among shorts to cover at the opening. May was forced up to 95½, which is ½2% to 1½6½, above last night's closing figures. July was ½ to 1 cent higher at \$ to 55%. War news was the principal influence in causing the upturn. Later the May option settled around 9½, while July steadled at 55½. From 9½, May jumped to 8½, totally eclipsing the high record made earlier in the session. The market was exceedingly nervous and only a few trades were made between these figures. A somewhat steadler tone then developed, while trading became comparatively quiet. As the day advanced prices gradually settled under a heavy load of liquidation, until May had fallen to 94 cents. A resumption of activity occurred late in the day on fresh rumors of war. Some of the early short sallers endeavored to buy their wheat back, but offerings were small. Prices again started upward and had nearly regained the high point at the close. Final figures on May were at 15% (55½, a net gain for the day of 1½ cents. July closed at 85%(85%, %g1 cent above yesterday's close:

### What You Get.

You Pay For

That is the way the Burlington runs its dining-car business-and what you get is good. The above expresses the basis of the popularity of Burlington dining-cars. It is an actual fact that the service and food in the Burlington dining-cars equal that of any high-grade

One of the best ways of becoming popular is to minister skillfully to the needs of the inner man, and what we want is deserved popularity.
