19th Ward.

**A FEW WORDS
ABOUT
SEWING MACHINES.**

SOME time ago D. O. CALDER was offered
the Agency for the sale of the Wheeler &
Wilson, Grover & Baker, and other first-class
Sewing Machines; but owing to the conflicting
testimony of persons who were acquainted with
the character of the different Machines, was
unable to decide which was the best for family
use in THIS COUNTRY, and therefore did not
accept.
When in New York last season, he (in com-
pany with H. B. Clawson), visited a firm doing
a very large business in SELLING, EXCHANG-
ING, RENTING and REPAIRING all kinds of
Sewing Machines, and who had no special in-
terest whatever in the sale of any particular
Machine. They informed him that the

HOWE MACHINE
Was in every respect the best Sewing Machine
in the market—that, during the many years of
their business career they never had a HOWE
Machine returned to them—that their cus-
tomers had exchanged nearly all other Machines
for the HOWE—that, if they were compelled to
confine their sales to the Machines of but one
maker, that one would be HOWE. The evi-
dence from disinterested parties of the
**SUPERIORITY
OF THE
Howe Machine**
Was so satisfactory to himself, H. B. Clawson,
Wm. C. Staines, and others who wished to pur-
chase Sewing Machines, that he made a pur-
chase and accepted the AGENCY FOR THIS
TERRITORY.

We are now prepared to receive orders for
those Machines for Family or Manufacturers'
use at
MANUFACTURER'S PRICES AND FREIGHT.
Orders can be left at the Store of Calder
Brothers, Salt Lake City, where descriptive Price
Lists can be obtained, or at our office in Ogden.
All letters addressed to us, will have prompt
attention.

either by letter or telegraph, are assured that
their Goods will be promptly and carefully
packed, marked and forwarded, according to
instructions. ON AS GOOD TERMS AS IF
THEY THEMSELVES WERE PRESENT.
The services of Messrs. H. S. Beatie, John
Clark, James Phillips, and other well-known
Salesmen are secured, which is a guarantee of
satisfaction to the Patrons of the Institution.
H. B. CLAWSON,
GENERAL SUPERINTENDENT.
Salt Lake City, March 10, 1889. w6 tf

THE WONDERS OF THE WORLD.
This world is full of wonders, some
known, and a great many more that are
being discovered every day, and yet
their number may be reckoned as legion.
The telescope reveals untold wonders of
the great universe in which our world
is but as a grain of sand, when com-
pared to others. The microscope in its
turn, is one of the great agents which
aids in discovering a host of wonders, in
the insect world.
These statements are proved by the
following facts, which have been dis-
covered by various means:
It is said that the polypus receives
new life from the knife that is lifted to
destroy it. The fly-spider is known to
lay an egg as large as itself. The cat-
terpillar is said to have four thousand
and forty-one muscles in its little body.
In the eye of a drone, fourteen thousand
mirrors have been discovered; and the
respiration of a carp is produced by no
less than thirteen thousand three hun-
dred arteries, vessels, veins, etc. The
thread of a spider is formed of four
thousand other threads, which come
out of as many minute holes in its body.
Spiders, no bigger than a grain of sand,
have been discovered with the micro-
scope, which spin threads so fine that
it takes four thousand of them to equal
in size a single hair. Ants are known
to travel in swarms several miles in
length, and of great width, over large
tracts of land, and their path is marked
by barren tracts which they have
stripped of all vegetable life during their
journey.—*Printers' Ink*

LIVE DUST.—Mr. Dancer, a Fellow
of the Royal Society, has been making
a microscopical examination of the dust
of English cities, and reveals some un-
pleasant facts about the same. City
dust is generally regarded as a nuisance,
from the irritation which it produces
on the lungs, and the impossibility of
keeping it off from the person or out of
the houses. But according to Mr. D.
there is another circumstance which
will increase the aversion in which
it is already held. In every specimen
examined by him, animal life was
abundant, the "molecular activity"
varying according to the height at
which the dust is collected. And of all
heights which these molecular wretches
could select for the display of their ac-
tivity, the height of five feet is that
which has been found to be the favor-
ite.
Just at the average height of the foot-
passenger's mouth, these floating, mov-
ing organisms are always waiting to be
devoured and make us ill. Further-
more, as if animal abomination were
not enough, a large proportion of vege-
table matter also disports itself in the
light dust of our streets. And the ob-
servations show that in thoroughfares
where there are many animals engaged
in the traffic, the greater part of the
vegetable matter thus floating about
"consists of what has passed through
the stomachs of animals," or has suffered
decomposition in some way or other.
This unpleasant matter, like the "mo-
lecular activity," floats about at a height
of five feet, or thereabouts.—*Boston
Journal.*

A NEW RELIGIOUS SECT.—The ex-
istence of a new religious sect has been
discovered in Russia, called the Skop-
zen, or Skopzi. The sect has been
known to be in existence in Russia for
many years, but has hitherto escaped
the vigilance of the police. The Skop-
zen have most barbarous practices.
The doctrine from which the name is
derived is the mortification of the flesh,
which they interpret as self-mutilation.
The members marry young. After the
birth of the first child, the parents are
rendered incapable of further offspring.
The object of this appears to be in
order to keep the family wealth undi-
vided. The treasury was discovered in
the house of a rich merchant in Mors-
censh. His name is Maxim Plotizyn.
His house is so large as to occupy al-
most a whole quarter of the city, and
served the purpose of a kind of Skopzen
nunnery. Nine nuns were arrested
there at the time, and among them a
sister of the leader of the sect. Pictures
of Seltanow Schilow, and other prop-
hets of the sect, were found in one of
the rooms. The treasury was not dis-
covered without great trouble. The
large cellars were searched in vain. At
last, after passing through six vaults,
on entering the seventh, suspicion was
excited by a large stove, which stood in
one corner, and which appeared never
to have been fitted up for use. On ex-
amining it an iron door was discovered
behind it, leading to a secret apartment,
which contained immense wealth. Be-
