Grass, Garden and Flower Seeds for sale, by John Hendrick and Co., at Deseret Bank Block, Salt Lake City. C. M. I. Wholesale and Retail Country stores can do well there.

4 & 75

EVENING NEWS.

Friday, March 8, 1878.

PRICE OF GOLD. GOLD, \$100.00. SILVER, \$1.00.

LOCAL AND OTHER MATTERS.

Post-News. The delivery of the lecture by Dr. Crocker, on "Diphtheria," which was to have taken place at night, at the Fourteenth Ward Assembly Rooms, was postponed until another time, when the weather shall be more propitious.

Seeds.—We are in receipt of Nellie Cat's seeds, plants, bulbs, etc., for 1878, together with some samples of choice seeds. He sends a sample of very desirable flower seeds with each catalogue, free to any who write for it. His address is A. C. Willis, Cambridge, N. Y.

Wool Tariff.—The Congressional Globe states that, on Feb. 25th, Hon. George Q. Cannon, in the House of Representatives, presented the resolutions adopted at the Wool Growers' Convention, held in this City protesting against a reduction of the tariff on wool and woolen goods. The resolutions were referred to the committee on ways and means.

Recovering.—A short time since a little daughter of Mr. William Nelson, of the 23rd Ward, was attacked with diphtheria, of malignant type. Dr. Anderson was called in and as soon as the character of the disease was known the patient was placed in a room separate from the rest of the family, none of the other children being permitted to enter it. We are pleased to be able to state that the little girl is now considered out of danger, and is gaining strength rapidly. There is no indication or symptom of the disease in any of the other children, those of whom, however, were the cause of the trouble. The strict quarantine measures carried out by Mr. Nelson are commendable.

Destructive Fire.—The good people of the Fifth Ward are apprehensive of danger to health and property by flood during the approaching summer. Their fears are by no means groundless. The unusually large deposit of snow in the gorges of the mountains this winter is a serious menace to the city. This brings to the mind of the residents of the lower part of the city the scenes of the summer of 1876, when hundreds of them were compelled to wade knee deep in water to reach their dwellings, the interior of many of which were also partially submerged. Their garden stuff, in not a few cases, also were ruined. These were serious matters of damage to those who by no means belong to the affluent class. They are people, almost without exception, who "earn their living by the sweat of their brow," and whose small little homes generally constitute the sum of their earthly possessions.

Not only is the snow deposit in the mountains promising for the descent of large bodies of water, but we are informed that, in addition to its sufficient capacity in point of weight and depth, the canal is badly out of repair in its banks. The snow is to be performed by men and teams, and to have been damaged by other causes.

The proposition in close proximity to the canal have petitioned the City Council and also the County Council to put in operation some effective preventive measures, that they may be guarded against future damage by flood. As the cause of the petitioners appears to demand the attention and action of those officers, it follows, we have no reason to doubt that it will receive due consideration.

Gypsum.—There is an excellent article in the Centennial, on the application of the gypsum to the remarkable effects of plaster and mortar. The writer says: "We know that under produce water, that it is the powder of a certain kind of rock, ground to a powder and spread evenly over an acre of clover will add 2,000 pounds (dry weight) to its yield in a season; known and acknowledged; yet it is none the less true that it does more and with greater results, as can be attested by farmers all over the country. There are thousands of farms that would not pay the cost of cultivation but for clover and plaster. Plaster shows the best results when applied to clover, though it crops, such as corn, wheat, oats, and potatoes, and when applied it is applied in this manner: "From the clover, which is cut with a cut-off, or a mowing machine, in Michigan, it is found that wet land is not benefited by gypsum, although it requires water to develop its remarkable fertilizing qualities, for which reason it should be sown before the spring rains have ceased. A great variety of soils are benefited by it, and even where there is little decaying vegetable matter it works a wonder.

Mr. Welch, a very successful experimenter on soils and the influence on them of artificial manures, first drew attention to the remarkable effects of gypsum, by having a field sown with ground plaster, in such a way that the seed gypsum should be conspicuous to all the passers by. Gentlemen going up to town to green color of those parts of the field which had been sown, and a body wanted to know the meaning of the word "GYPSUM." This brought the rock into favor, and increased the green color of the field, and the chemical properties of the mineral are now well understood and it is used largely as a fertilizer. We need hardly say that gypsum is a common deposit of the earth's crust in our own country.

Remedial.—The following, from the Prairie Farmer, concerning the giving of bloody milk, is worthy the attention of farmers, dairymen and some other folks:

The remedy for the troubles which cause bloody milk will depend, in each case, upon its cause and the cause of it. If there be no other trouble than that the milk is diseased, it can be easily cured, and if there be no indication of any other remedy will be soon. Give 20 drops twice a day, for four days. If the trouble results from an actual injury, it will be best to treat to nature for a remedy. The diet should be of a laxative character. Give a grain while the trouble exists.

If there is fever existing, the udder being hot and swollen, and the milk not only bloody but otherwise diseased, it may be taken as a case of garget. Draw the milk frequently by means of a tube or quill. Give a pound of Epsom salts in a quart of grain, slightly warmed; and give one teaspoonful of saltpetre once a week.

Glee Club.—Next Tuesday evening the Union Glee Club will give an entertainment in the Seventh Ward School-house as a complimentary benefit to Mr. Wm. H. Foster. The programme will be full and well selected, and Misses L. Nebeker, S. E. Olsen and A. Bourne will assist. Mr. Olsen and Miss Bourne will be the accompanists, and the whole will be under the direction of Prof. C. J. Thomson. Mr. Foster is well known as a good musician and a good man. The Club are splendid performers, and the young ladies are most excellent vocalists. Admission 25 cents, reserved seats 50 cents. To commence at 8 o'clock sharp.

"The Flood."—The bluster, disagreeable weather last night told somewhat on the attendance of the lecture of Mr. S. W. Darke, on the "Mosaic Account of the Flood." The gentleman handled the subject in an instructive and interesting manner, directing his arguments to showing the feasibility and consistency of the Bible narrative of the great historical event. He had evidently given the subject careful study, and made diligent research for reliable information in support of his position.

Theatre.—Den. Thompson and his company performed Joshua Whitcomb last evening to an audience moderate in size but enthusiastic in appreciation. The building snow storm prevented many from attending but the piece was played to the same vim and excellence exhibited on former occasions.

The Majestic are the attraction billed for the Theatre.

TESTIMONIAL. I hereby certify that having suffered greatly for some time past, I at length consulted Dr. E. L. Plant who yesterday gave me some medicine, and in two hours and a half I was relieved of a tape worm seven yards in length. In gratitude I present this testimonial to the skill of Dr. Plant.

Mrs. L. E. ZORNE, Cedar Fort, Utah Co. S. L. City, March 5, 1878.

Excommunicated. Charles P. Bird and his wife Amanda Bird, and Allen Tanner were cut off the Church of Jesus Christ of Latter-day Saints for apostasy.

JOHN R. MURDOCK, Bishop. RICHARD H. HENRI, Clerk. Beaver City, March 4, 1878.

"Red Stockings."—We are requested to announce that the "Red Stockings" baseball club will meet to-morrow evening, at 7 o'clock, at the office of the Doctors Benedict.

From South.—Hon. John W. Young returned last evening from the south.

OBITUARY. Died at Orderville, Jan. 2nd, 1878, of influenza, THOMAS W. COONELL, who was born in Orderville, Tooe County, Indiana, on the 1st of July, 1841; joined the Church at Preston's Fork, Iowa, in the year 1860; resided in the State of Iowa in the year 1861, also several winters in the Territory of Arizona, and was with the company in which Rep. George A. Smith, Jr. was travelling when he was killed. Moved from Cedar City in the year 1865 to be a home missionary among the Indians in the south-west portion of the Territory; joined the "United Order" which was first established at Kanab, and has been a faithful and earnest worker in that order until his death. He was the father of thirteen children, and had several grandchildren and one great-grandchild. He has a deeply felt and a very large circle of friends and acquaintances.—(Com.)

BUILDING LOTS FOR SALE. Of any size, very cheap, and on easy terms, the best building lots for sale, and at a low price. Apply to Mr. ROBERT LAWSON, grocer, near Ryker's corner, 2nd South Street.

DISINFECTION.

Suggestions by the Quarantine Physician at Salt Lake City, March 4, 1878.

Whereas, the City Council of Salt Lake City have recently passed a resolution, requiring the Quarantine Physician to publish, as often as considered necessary, the best method for disinfecting, where cases of SCARLET FEVER and DIPHTHERIA exist.

The following is respectfully submitted:

All cases should be isolated immediately from the community. The patient should be placed in a room, and the room should be disinfected. The patient should be kept in bed, and the room should be kept at a temperature of 60 degrees Fahrenheit. The patient should be kept in bed, and the room should be kept at a temperature of 60 degrees Fahrenheit.

The patient should be kept in bed, and the room should be kept at a temperature of 60 degrees Fahrenheit.

The patient should be kept in bed, and the room should be kept at a temperature of 60 degrees Fahrenheit.

The patient should be kept in bed, and the room should be kept at a temperature of 60 degrees Fahrenheit.

DR. E. L. PLANT'S.

Warm Springs for all kinds of stock, is giving entire satisfaction and may be had wholesale and retail at his office, Market Street, Salt Lake City, and at the Globe Hotel, Ogden, every Monday.

THE DAUSMAN & DRUMMOND TOBACCO COMPANY'S.

CROSS-BAR.

TRADE MARK—Stamped on Each Plug.

THIS 16 ounce army pound is marked into 16 equal spaces (1x11) each space representing an ounce. It being justly divided, the consumer is satisfied with his allotment, and the retailer knows that he has given neither too much nor too little; as he is liable to do where the lump is not so marked. This lump also renders it unnecessary for the retailer to have more than one package of Tobacco open at a time, as he can accurately cut any size lump needed from a 12 ounce lump down to a single thick pocket piece. It is the only plug of Tobacco marked for the benefit of the dealer and consumer. All others marked with tin, wood, leather, or other tags, or in any other manner are solely for the benefit of the manufacturer.

It saves interest, as a single package gives the dealer the sizes he requires, it is not necessary to keep six or eight open at a time as is usually the case.

The manufacturer is able to make a better chew in a pound lump than in a smaller one for the same money. No loss can accrue from change of styles or variation in prices. Most dealers know by bitter experience how great an advantage this is. It is manufactured with the utmost care and each plug is perfect in chew and style.

For sale by all Wholesale Dealers.
