do right by ourselves and all mankind, there is ample scope for the employment of the utmost means and capacity of every one in developing the resources in the elements with which we are suror infringing upon the rights of any. We have an abundance of excellent iron we use. We have had sheep from the beginning of our settlement here, and

which contain considerable acid, and apples that are not of the sweetest kinds have all a neutralizing tendency. They Placed on the earth to subdue it and may be and should be used by all who can obtain them, and most of them everybody can get here, so that the effects of the alkali and saleratus may be neutralized in the system before injurious results become apparent. We rounded, without in the least oppressing are not prescribing remedies when the disease has appeared, but preventatives that it may be kept away. Mothers iron ore, and are still importing all the when nursing infants should remember that they can partake of many things with apparent impunity, because their physical systems are developed and strong, which act very banefully upon their babes whose bodies are weak. In consequence of this, the mothers may continue to use articles of diet, containing the objectionable elements alluded to, without using enough of a neutralizing element, and feel no apparent injurious effects for a time, while the children who draw sustenance from them would feel it and suffer. The habits and diet are authorized to state that enough has already, of the mothers should be, therefore, so ordered that they would enjoy as good health as possible themselves, and avoid the transmission of disease to their children. Infants that have not got their teeth or that are teething should never have food given to them that requires to be chewed, whether it be prepared for them or not; their stomachs have not fined \$10. strength enough to digest it without receiving injury. Another fruitful source of sickness, principally among the young, is negligence in not trying to preserve as equal a temperature to the body as possible. Why is it that colds are much more prevalent in the fall and spring, than in the depth of winter? The nights are cool and frosty; sufficient bed-clothing is used to impart a comfortable degree of warmth; in the mornings, men, women and children will rise from warm beds, put on the clothing that will be used through the heat of the day, and until the air inside the house is heated by the stove the body feels chilled and uncomfortable. Perhaps the little ones are allowed to run about bare-footed, those who should see to their being carefully and warmly clothed finding employment in lighting fires, cooking breakfast and attending to other household is kept as well supplied with wood at mid-day as in the mornings and evenings, and thus there is a continual succession of atmospheric changes from heat to cold and from cold to heat, which surrounds the body, alternately chilling and heating it, producing colds, cured a quantity of Morphine, which he took, catarrh, neuralgia, rheumatism, etc.; all of which might, to a great extent, be avoided by the exercise of wisdom and care in having a more equable temperature in-doors, and using extra clothing when going out into the cool air. Let all rooms be sufficiently ventilated, especially sleeping apartments; use food that will generously sustain the system and the waste of which will pass freely from it; partake of such things as will neutralize the alkaline and saline elements which are around us and which enter into our systems in our eating, drinking and breathing, and try to preserve as equable a temperature as possible, each individual carefully studying their own peculiarities of physical constitutions to deal with them as they may require, and an increase of good health and sound bodies will be the result. We are no doctor, but we have proved the utility of these things and can safely recommend them.

## [November 2, 1864.

THEATRICAL .- That portion of our citizens who take pleasure in witnessing dramatic representations will be gratified to learn, that the Theatre will open, for the regular Winter season, on Saturday evening, 5th inst. The fine old play, "A New Way to Pay old Debts," which has never been performed here, will be produced on the occasion, with Mr. T. A. Lyne as Sir Giles Overreach. This is one of the most difficult characters to faithfully portray that Mr. Lyne has ever been cast in here, and doubtless his numerous admirers will gather in force to witness his rendition of a character that has nothing redeeming in it, except what interest the actor may throw around it by the force of histrionic ability, or the moral to be derived from the working out of the plot and the retribution that overtakes the remorseless and villainous. Sir Giles. It is, throughout, a heavy piece, and will task the abilities of all engaged in it.

We understand the Management intend producing during the season a number of new pieces especially procured for that purpose, as well as plays that are new to the boards here by the most eminent dramatists, and otherwise endeavor to make the season a complete success.

WEST JORDAN CANAL.-The Jordan Irrigating Company have completed the survey for their contemplated canal, and we are informed that the work of excavation commences this week: To those who have been in doubt in reference to the immediate prosecution of the work, we been subscribed for carrying on the work to the completion of the canal. Those who desire to become share-holders in this important enterprise, should apply without delay to Geo. B. Wallace, 17th Ward, or to Robert L. Campbell, Historian's Office.

POLICE REPORT .- Charles Blake was arrested. on the 21st for an assault on a P.G., and on being brought before Alderman Clinton was

On the 25th, a C. V., named Frederick Jones. was arrested on a charge of having committed an outrage too gross for publication. For good and sufficient reasons the hearing of the case was set for Thursday. At the examination the evidence was clear and conclusive against Jones, and he was committed to the custody of the officers to give the Court time to examine the law on the subject. At 2 p.m. on Friday, the prisoner was brought into court and informed by Justice Clinton that there was no law on the statute books of our Territory applying to the case. Jones was thereupon discharged. About seven o'clock the same evening the dead body of Jones was found within a rod of the footpath crossing the S. E. corner of 1st South and 2d East Temple streets. The father of the outraged boy was arrested the same evening on suspicion, but no evidence appearing against him either at the Coroner's inquest or at the examination before Justice Clinton, he was honorably acquitted. The sudden, fatal termination to Jones' career should prove a warning to all workers of abominations, for there is always the risk that some one will be impatient of the law's delay in cases so outrageous and abominable, even when a statute covers the case.

Charles Blake was again arrested on the 25th, charged with assaulting one Tierney, a P.G. At the investigation it was proven that Tierney had perjured himself for the purpose of getting Blake out of the hands of the military. Blake confessed to having stolen the horses, for which crime he had been put in duress by the military, and he has since been turned over to the Sheriff of Tooele county.

HOME ITEMS.

Tierney was set at liberty it seems by the military authorities, went to the Drug store and proand died the same night.

Thomas H. Wright complained of a discharged soldier's having a shot gun of his in pawn, and attempting to take it out of the Territory. The ex-soldier pawnbroker was arrested and brought before Justice Clinton. After hearing the evidence in the case the Court assessed a fine of \$25 and costs, and ordered the gun returned to Wright. The defendant paid the smart, and started for the northern mines.

UTAH COUNTY .- We understand that Brigadber Gen. Johnson, is having a general muster today, of the militia of the southern part of the county.

The crop of Sorghum is represented as being very light throughout the county, and in some localities the Potato crop has been injured by early frosts.

SPANISH FORK .- Mr. Thomas Day, of Spanish Fork, informs us that he has thirteen grape vines 4 years old, of the California varieties, from which he raised the past season 400 pounds of fine, full developed fruit. Mr. George Mayer, of the same place, has raised 100 pounds of excellent grapes from two vines. This was the second year of bearing.

Mr. Z. Coltrin, did not have such good fortune with his vines, for although he had a fine crop, a great proportion of the crop was destroyed by breachy cattle. These three brethren expect to offer for sale in the spring, 1,000 rooted vines.

CONCERT .- We invite attention to Professor Thomas' advertisement elsewhere in our columns, nothing doubting but his personal friends and the lovers of music will crowd the 13th Ward Assembly Rooms on the night of the 3d inst.

A WELCOME FEAST .- On the arrival of Capt. Hyde's train on the 26th ult., the passengers were treated to a very bounteous and varied repast provided by the Bishops of the city wards, an acceptable contrast to the dry fare of the. plains.
