

LOCAL AND OTHER MATTERS.

FROM TUESDAY'S DAILY.

INFORMATION WANTED of the whereabouts of Anthony Charles Du Fosse, who left Salt Lake City, Oct., 15, 1860, for California, with six engineers. Any one knowing of him would confer a favor on his sister by forwarding information to Mr. H. S. Smith, Mill Creek, Salt Lake Co., U. T. California papers please copy.

FEMALE RELIEF SOCIETIES AND STRAW PLAINTERS, Ho!—The members of the Female Relief Societies throughout the Territory have frequently been advised to teach the young sisters of their various Wards the several branches of domestic economy, straw braiding, straw hat and bonnet making, and other light but very useful branches of manufacture. We believe that this advice has been followed in many places, and that numbers of the girls are now able to plait straw and manufacture straw goods for home wear. This is very good and is worth all the trouble its acquisition has cost if it answer no other purpose than supplying the families of those who have engaged in it. But it would be still more encouraging if a market could be found for good home-made straw goods or for any amount of plaited straw. We think that a market can now be found in this city for a large amount of plaited straw of good quality. Mrs. W. B. Wilkinson has opened a fashionable millinery and straw goods establishment on East Temple street, and she is prepared to purchase a good article of plaited straw from town or country plaiters. Ladies and gentlemen desirous of purchasing home-made straw goods, or fancy millinery of any style or quality, home-made or imported, will do well to give Mrs. Wilkinson a call, they will find her stock elegant, and as cheap as the cheapest in the market.

FLUCTUATIONS IN BUSINESS.—A great impetus is being given to all kinds of business by the prospect of the development of mineral resources in Utah, and there is every indication that money will shortly be more plentiful here than it has been for some time past. A noticeable fault among a large number of our people is that in times when money is flush they seem to have an idea that such a state of things will continue always, making no allowances for the fluctuations of trade. Hence many spend their means on things that are of no real or permanent benefit. Many people seem to be so organized that they must spend money as fast as they get it. The best advice that could be given to such persons is that if they must get rid of their means, to spend it in making their homes pleasant and desirable and on other improvements that will be conducive to the comfort and happiness of themselves and families. Money was somewhat plentiful here for a short time during the building of the U. P. and C. P. railroads and, doubtless, many who spent foolishly what they then earned by hard toil, have since regretted that they were not more careful to put the means they then had to better uses than they did. It would be wholly inconsistent to expect a future unbroken continuation of the briskness of trade that will characterize this summer and fall. Trade is like the seasons it rises and falls, comes and goes. Mechanics and laboring men generally will do well to use what they make with an eye to the future.

FROM WEDNESDAY'S DAILY.

ACCIDENT.—As the son of Mr. William Lovatt, of the 1st Ward, was playing with other boys near his father's residence, to-day, he accidentally broke his left forearm. Dr. Higgins Davis was called in and set the fractured limb, and the boy is progressing favorably.

METEORIC.—"Last Thursday night a very large and brilliant meteor, with a long train, traveling in a northerly direction, was seen by Mr. W. Driver to burst in the neighborhood of Mr. W. Baker's residence on the bench, scattering innumerable sparks and illumining the neighborhood with a light of varied colors."—*Ogden Junction*, April 1st.

INCORRIGIBLE.—Terry, one of the two incorrigibles who were drummed out of the U. S. Service, at Provo, a few days since, is keeping up his old game. He was arrested yesterday for being drunk and kicking up a general row. When taken to the City Hall he gave the name of Knowlen.

A SHOOTING CASE.—His honor Chief Justice McKean having remanded George Graham back to the Alderman's Court for amendment of commitment, or re-examination on the charge against him of seduction, he was again brought before Alderman Clinton, at noon yesterday. The commitment having been duly amended, he was taken in charge by Deputy U. S. Marshal Firman. As the two were leaving the City Hall, an old gentleman, named Joseph P. Risley, stepfather of the girl seduced by Graham, stepped up and fired a shot from a revolver at him. Graham thinking "discretion the better part of valor," made good time for the middle of the street, when Risley again fired at him. Luckily for Graham the old gentleman was either too much excited to take a steady aim or is a poor shot, as he missed his mark each time. Immediately after

the firing of the second shot, the police were out of the City Hall and had Risley in custody. He was brought up for examination twice last evening but, owing to Deputy Marshal Firman, who saw the shooting, not being present, he was each time remanded.

Since writing the above, Risley has been examined and bound over to appear at the District Court, under \$2,000 bonds.

TERRITORIAL NEWS.—The following was received by Deseret Telegraph:

ST. GEORGE, 4.

The Panacca Co-operative Association have depreciated their stock of merchandise ten per cent, and have declared that, hereafter, their business shall be on a coin basis. Weather delightful.

PLEASANT GROVE, 5.

The fact is unquestionably demonstrated that rich mines are in abundance in American Fork canon; a great amount of ore is already on the dump. An ore smelter is being erected, and preparations for two more are in view. C. B. Hawley & Co. are rearing a saw mill, and two portable ones are coming. These, with those already in successful operation, will furnish lumber and shingles sufficient to supply the demand. Houtz and Farnsworth are located at the mouth of the canon with ample provisions for man and beast. The snow is fast disappearing. A company is organized to complete the road on short notice, and American Fork is destined to become a great place.

NOTICE.—Messrs. Sharp & Young are settling up their accounts and wish all having claims against them to call and obtain a settlement at the office of Mr. Joseph A. Young.

ESTRAY!

CAME to my place, in January last, a Brown MARE, star in forehead, branded on left shoulder J. S. The owner is requested to prove property, pay charges and take her away.

BEE-KEEPERS, TAKE WARNING!

THE BEST

BEE-HIVE

IN THE WORLD

KIDDER'S IMPROVED

COMPOUND AND GLASS HIVE.

EMBRACING the essential features of all other hives besides many other points and advantages that no other hive contains, thus making it the most complete hive that has ever been invented. I will here give a few of the advantages this hive possesses over all others.

1st, The brood box of the hive is composed of two walls, giving a dead air space around the entire swarm, formed by suspending the inner portion, containing the comb frames within the outer part, and when thus arranged, an even temperature can be given the bees both summer and winter, and is a house as well as a hive to the bees, as they can be safely wintered in any part of the United States on the summer stand. If properly managed, the bees will never cluster upon the outside of the hive in summer, as is the case with nearly all other hives, but will give a large amount of surplus honey instead, every thing being favorable.

2nd, The surplus honey arrangement about this hive cannot be equalled by any other hive in the world, as the surplus honey receptacles can be placed in the bottom under the frames, as well as on the top over the combs, and two or three sets can be used at a time to great advantage, and when properly arranged an enormous amount of surplus honey can be realized (if there is honey in the flowers of the fields,) and in the most saleable form and shape, being in small boxes weighing about four pounds each, and yet having all the advantages of a large box while upon the hive.

As regards a large yield of honey, it depends wholly upon the skill of the bee-master, the kind of hive in use, and the season. With the Improved Compound Hive in skillful hands, and a good season, it is safe to calculate upon from one to two hundred pounds of surplus honey per hive, especially if there are no swarms thrown off.

In the third place the arrangement we have for getting straight and parallel combs cannot be equalled by any other hive in existence, as the bees will build every comb on the worker comb principle and of one exact uniform thickness, and all perfectly true and straight, either one of which can be removed from the hive separately without disturbing either of the others, which is a feat that cannot be performed with any other hive, and which entirely obviates the hatching drone bees, that are now such an annoyance to the bee keeper.

The Patented Features of this Hive are such, that it embodies the principle of all other moveable comb hives that compel the bees to build straight and parallel combs within moveable frames so they can be removed from the hive separately. Without the use of this patent, all other moveable comb hives are but a little, if any better than the common box hive, and all persons that make, use or sell hives with this improvement are infringing, and are liable for damages.

An examination of this hive will convince any person of its utility in every department of bee culture, and in every emergency, we care not what it is, either in cold or warm weather, or in a cold or warm climate.

The four great troubles or vexations in bee keeping are successfully overcome, such as the Flying of the bees to the mountains in swarming time, the ravages of the Moth Miller, Robbery of bees, and bee Wintering. There are probably more bees lost in winter than all other ways combined, especially in the Northern States.

The bee keeper will understand that Kidder's Improved compound Hive is the one for every person, and all climates, as it embraces all the claimed advantages of any other patent hive, besides many other essential points and advantages that no other hive possesses.

The Glass hive is furnished with moveable comb frames, with doors to be opened when an outside observation is to be taken. These are adapted for observations and experimental purposes.

Price of Individual or Farm Rights entitles the purchaser to manufacture the hives above named, as many as may be desired for his own individual or farm use. SIX DOLLARS.
