

The Astors.

The death of William Astor in Paris has put people talking as the death of an Astor always does, about the family wealth and inheritance. One statement has been made that William Astor was the son of the third generation of the Astor family. This is not true. William Astor is a son, Mrs. Dolan, who grew up in Europe, and a brother, Henry, grew up on a farm in Columbia County, N. Y. Henry's father, William Astor, with a small wife, became interested in the rank of life from which the Astor family originally sprung and preferred farming to making up interest and building houses in the city. The founder of the American family of Astors was the son of a German baker at Waldorf, near Heidelberg, Germany. But it was cousin of the baker's son that became the ancestor of the Astor's. And he was the daughter of an equally poor and humble German family in America. Therefore was there no actual or no recommendation by the girls of the Astor family always poor.

The policy of the Astors has been to keep the wealth together at all times. The man who shows talent for increasing the value of the property, while the girls were working as money makers, were always purchased off with a small sum. Thus, William H. Astor gave his son John Jacob, a respectable sum of \$100,000 to his son John Jacob, a respectable sum of \$100,000 to his daughters.

William H. Astor, the father of the family, William Astor's son, was the real number one of the family, for old John Jacob, "the original Jacob," was worth only \$100,000 at his death. His money was put into the New York Chinese Trade. But was William H. Astor the real number one of the family? He indeed had an attachment to the real estate investment business, which has since ruled the Astor fortunes so enormously. The Astor real estate policy is said to be to employ every巧妙 power to sell at all net to both ends.

At all events the present head of the family, William Astor's son, grandson of William H. Astor, and grandfather of William D., is said well on and worthily to be worth \$100,000,000. Is it William Astor's widow who has the financial commandments? At the open end-motions she has sometimes very demands to the value of \$100,000. William was the father of Mrs. Colleen Keayton.

The French Aristocrats. They are aristocrats in the strict sense of the word, who assume themselves by calling themselves aristocrats. They do not think that imper and nobility are part of aristocratic politics. Therefore they are in a state of indignation because Ariston and Bismarck were not gallantly at Paris instead of being sent to prison for service for life.

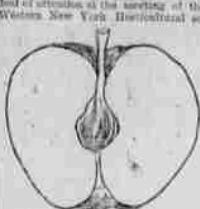

There is no doubt that the "extraordinary circumstances" found by the covering jury was rendered the Ravaged widow was the fear that they too would be blown up. The public was so demoralized that "cowards" showed the angry public as the exuberant joyousness passed out of the courtroom into the street. And the mercenaries who do their crimes under the name of assassins grow bolder than ever. The French are not a cowardly nation. They must know it is a brand of disgrace on them that a whole country is terrorized by a few individuals. The lives of the judges and juries who tried Haywood might as well not have been taken. But if it is safe to worth having at such a price. M. Beaupere, the public prosecutor, shows so sparsely in the motto of the court, the exuberance of the court. The execution letters had no effort to give the strong, brave spirit from its day.

The bravest to prevail. New York has told the conservation of the Great Western railroad of last. He died seven years ago. New York has given her so much of the corner of his business life than many years for the town by the sea to build the pedestal for the Library statue to stand upon while she was on lightning the world, and then it was erected by the private enterprise of a newspaper. But New York got there first and she will get there with the Great Western. If Chicago had had that monument or Cincinnati or St. Louis or San Francisco or Atlanta or Texas.

There are always ways of getting around laws, even of the most stringent kind. Considerations are so bent on exterminating the Alaskans that they will sell their whalers to others than those other than Great Britain. The whalers will be sold under foreign flags, but the same Canadian seal masters will command them and continue the trade. Then the other nations will be brought into the enterprise. Apparently it has never occurred to the pessimist that they can do anything else for a living than extirpate seals, or that there is anything else in the ocean worth catching.

Once more the habit of women in bodies makes her bad for a man just before her rivals has been justified. This time it is the Cuban aristocracy. She saw a dark object over her bed, grabbed it and found it was a man's hand. The victim was so shocked he fainted and the man was informally for a well known and gallant professional drummer.

A Cross Troubles has a son. A snapshot from Wisconsin, Ind., says Charles Neil, a laborer in Aspinwall, Pa., while engaged in trimming a tree fell across his eye to the ground, a distance of forty feet, and was injured. Neil fell into a deep hole, and the falling limb buried him in the tree root. His life fell out of his hand and remained in the air for ten feet, alighting on his last limb. Glade Democrat.

A SECTION OF THE LONGFIELD APPLE.
SIXTY SEVEN YEARS VARIETY THAT IS ATTRACTING ATTENTION FROM FARMERS.

London Women Coming to Life Late. A very significant change has come over Londonites of late years with regard to a certain form of life. The reason of this is that there are now more of living in a flat than in flats occupied by that amount of flat dwellers could hardly be said to exist at all in London. A few months back buildings were built after the American fashion, but a little later on the English took to it for a long time, then realized what was wrong and immediately set about remodelling this fact that they then adopted a very new yet to the older advantages that they offered to their tenants. Now during the last three years we have seen the number of London flats increase to a point where their rents and rates cannot be kept up, and the number who are occupying them for them.

Wholesale flats, in some cases, have been constructed, and have been taken by large families who have been unable to find a home elsewhere. It is said that for flats the other day, the man was willing to pay a fair rent for very modest requirements, discovered that, unless he could specially make up his mind to take the unfurnished article, he had no chance at all of inhabiting the article when it was furnished.

It is the demand that to let.

That the supply is making gigantic strides to overtake the demand is evident to any one who has lately visited the building operations in our streets, and the gradual rise of great numbers of flat dwellings.

— "The demand that to let.

On the whole, we don't think it would be an exaggeration to say that, whatever may have been the increase in the number of flats in the metropolis during the last twenty-five years, the number of flats must have increased more than a thousand, — London Post.

Single Duties.

The growing of flats from seed is one of the pleasures of gardening, and the wonder is that the practice is not more general. The author of this article has made a few experiments in this little trouble projection to the satisfaction.

A correspondent in The American Agricultural Journal says that soon in a hothouse, in pots, the house will make good flowering plants by the middle of July; after that, they can be set out in the garden.

Flats should be sown in May. The plants should be set in rows two feet apart and a foot apart in the rows, so that if half of the plants prove flowers that are undesirable they may be thrown out, and the remainder will supply more flowers.

A great deal of difficulty in planting flats, however, comes from planting too closely. Plants must have room for their proper development. This is generally disregarded, and so many as twenty plants are allowed to occupy the space that is sufficient for one.

The soil for flats today is eight hours later, and the plants are to be transplanted and the thought of the coming frost to get ready temporary shelter the postman to time, and brought to completion.—Cult. South Post-Journal.

Diseases of the Plant.

The black fungus or knot, as it is called, plagues growing in grass and impeded. The best preventive for knot is good clean culture, and the best remedy, cutting away of the diseased parts as soon as possible. As for the knot, this is only a small portion, just as in this case the pot lengthened, spread a large sheet prepared for the purpose around each tree and put it so as to shade down all fruits that have been stung, as well as all the currents. Both insects and sting fruits can be destroyed by spraying with water.

In the meantime his little son, while amusing himself with papa's gun, pulled on the stick and the rod one end of which struck directly into the depth of the water.

When papa went to clean his fish he found the boy with a ribbon through the stick, apparently sprung.

Inquiry elicited the fact that the boy had "swum away" and the diligent son was trying to retrace these.—New Bedford Journal.

The Best Four Peaches.

At the last annual meeting of the New Jersey Horticultural Society, in reply to a question, "What are the four best peaches?" four answers were elicited:

President Blackwood replied, Mountain Rose, Green, Moore's Favorite, Elberta and Elberta Late.

Mr. Greeley answered, Mountain Rose, Green, Elberta and Elberta Late.

Mr. Wadsworth said, Mountain Rose, Green, Elberta and Elberta Late.

Mr. Black's preference for peach was Mountain Rose, Green, Elberta, Elberta and Elberta Late.

Mr. Black's preference for peach was Mountain Rose, Green, Elberta, Elberta and Elberta Late.
