men in the management. It has not been earned and paid during the current year but is in the hands of the company as a loan to buy stock at the low price of \$100 per share. It is payable to Express to Edward B. R. and to the other directors in full or in part to advance.

of this property on behalf of the Company. They visited and examined the same with extensive acreage of land, rich in timber. Now is the time to make a decision will reap the benefit.

Safest Investment, Largest Dividends.

A portion of the full paid and non-assessable capital stock of the Boston & Texas Copper Company is offered for sale at Five Dollars per share (\$50 for Ten Treasury copper shares) and is redeemable in gold and silver coin at option of the holder.

The company controls over one thousand acres of rich copper land in North Texas which is also valuable for farming and town purposes. The tract is some 10 miles long and about three miles wide. It is equivalent in size to five hundred ordinary mining claims.

The property has been developed sufficiently to begin producing at once, large amounts of the richest copper ore, (40 to 75 per cent.) known out and worked in the world, and quantities of copper metal and other treating from 2 to 8 tons per ton, cost, copper found. (Cinnabar and Hanks and other great dividend papers are making in 1 to 3 per cent. etc.)

The property is within 11 miles of a railroad and fuel and water are available. The ore and metal run on the surface and a few feet down, and can be mined and processed by open dumps than by any other deposit in America. Copper will be produced on the ground and in place of machinery can be treated \$10 to 100 tons of ore and produce 1 ton of copper, and according to engineers' estimates earn \$2,000 to \$5,000 per day net with copper at 15 to 60 cents. To take 100 tons of ore per month.

• The property has a national reputation and a record in the State Engineering Reports. It has been examined and reported upon by the highest engineering, geological and expert authorities and its mine value established beyond all question. If it was an experiment, not the value expenditure, they are proven and demonstrated.

From Report of Prof. Wm. DeKaye, former State Chemist of Texas.

"Each massive outcrop of copper ore here has been traced out like a small and a dozen hills that are of 12,000 acres of land which the company owns, hardly a 100 or more must be found without one upon the surface."

Average of the depth of 100 feet was made upon the level land, and ten hours work resulted in the raising of 6,000 lbs. of rich copper ore, averaging about 60 per cent of copper. (Worth \$100,000.)

It is easily melted and the stream in which it is found can also be made successfully crystallized thus ore in which copper runs pure."

From Report of Prof. W. F. Camplin, former Geologist of Texas.

"... In order that I might see the condition of this lake after this amount of work had been done. I employed a few hands and cleared out the tunnels which I could reach of sight. This is the first time of copper ore will yield as high as 75 per cent. of copper. I drove the tunnel twenty feet further into the hill, following the vein. When I had gone some twelve feet I struck another ledge of copper—limestone rock and no farther below the next ledge. It is the fact now we strike another fault below the second ledge. Undoubtedly because the same conditions is a reaction of superheated metal solution extending the entire width of the tunnel, say two feet, and is probably much wider. This must yield yield about 15 per cent. of copper."

From Report of Prof. Gustave Westman, Mining Engineer.

I am glad to express my sincere satisfaction with and confidence in the report made on Prof. W. F. Camplin.

"I have seen 100 feet of ore from the surface on the three years ago, and the ore and in the deeper ore is contained in the veins of the ore, and generally inclined in order to find large deposits buried, later this year. After washing, the clay was found to contain 12 per cent. of copper ore of same value as above. These were found of course to be taken out and made available of a relatively poor expense."

FROM REPORT OF T. BURTON EVERETT, MINING ENGINEER AND EXPERT.

... That every bit low, President, and others, Boston, Mass. • • • Gentlemen.—There is abundant evidence of rich copper ore, not only at the mines already opened, but in various other parts of the property, and it is my opinion that this will prove to be one of the exceptionally rich copper-bearing fields of the United States, with undoubtedly very great value on account of the magnesian wall which they are so closely associated with. The veins are accessible at every point, the use of mining will be very small, as the ore is not in hard formation, and there is no deep work.

At all in I have been able to investigate, and I have done so carefully. I am of the opinion that it is one of the richest copper fields in the country.

Very respectfully yours,
T. BURTON EVERETT, M. E.
Full pay for \$2,000,000 estimate per acre.

Majors T. M. Spaulding, of Boston, and C. F. Crosby, Esq., of Lowell, Mass., who returned June 19th from an examination of the property, on behalf of the Committee of Stockholders and Investing Investors, report that they found the property as represented and confirm the experts reports. They visited and examined the mine and confirmed the miners' reports.

The Company is thoroughly organized with substantial business men in the management. It has such extensive acreage of land, rich in copper, and so easily and cheaply mined and converted, that dividends can be earned and paid during the current year. Now is the time to make a safe and profitable investment, and those who take advantage of this opportunity to buy stock at the low price offered will reap the benefit.

Permit by P. O. Order, Registered Letter, Check or Express to Edward B. Robins, Treasurer, Tremont Building, Boston, Mass. Price \$5.00 per Share, Subject to advance.
