Here you not see men who was abled have their rots and spought to their as I wish them; and I suppose it affects almost every family so in this tewn.

suppose I am afraid of the world? No. Related by Elder Orson Hyde, June 28th. I have nothing to do with the world, with phenevil, with any of his servants, nor with his commandments. All I have to do with is the Saints. I belong to the kingdom of God, with my family, and with everything I possess on earth, or in heaven, it is the Lord's, and I am his servant, and I devote all I have to him, and to his cause, and I devote all I have to him, and to his cause, and I devote all I have to him, and to his cause. I have nothing to do with the world, with thedevit is all at the service of this church and people.—
I have said it to my family, and I say it now,—
when I have finished my course pertaining to the

or a quarter—a piece of the same size a

or a quarter—a piece of the same size a tradesman to varnish a box, furnished with foot long, connected to it by a flexible leads and one of those he sent with the box, remay even here be found slily contriving to allow the light of her sparking eves to beam through this dark screen. Here also is the same mystery, and the beauty lies concealed within the outer shell.

Now standing in a spacious quadrangle, ex.

The new ord not the garden, unveiled and undiscentification, and undiscentification, and undiscentification, arising from the words—I perceive an indistinctness—Hiptonian that his key would not the third dark screen. Here also is the same mystery, and the beauty lies concealed within the outer shell.

Now standing in a spacious quadrangle, ex. carayan. Carayans are aften destroyed while man of having changed the lock, and after sides and perfects the joints, one halfofth crossing the African desert. When they are some evasion, he acknowledged the fact, five feet. about to encounter the simoon trey fall upon stating that, on examination, he had found their faces in the sand else they would be over it such an excellent one, that he took it off led down on each side of the cement, and and kent it, making another exactly like it, with maker's name, and everything com-plete, except that the original key would not open it.

Their mechanical contrivance generally

Their mechanical contrivance generally have some defect of this kind. They have never made a watch that will keep time, the rod a little, then draw it to the leather, hough they greatly prize watches, and usu- which being flexible allows the rod tobe turn ally carry two. If you ask the reason of this fashion, there reply is: Spose one ma-

Fruit Culture Now

AND FRUIR CULTURE TEN YEARS AGO .- In fruit was hid in its hollow trunk This war was be- time, most every body likes good fruit; every body tween America and England. The king of the is animated and unde thrice glad by the appearance of fine apples, peaches, and pears. Ten icel art had not made much impression amou the minds of the people, at least in this country. In New Jersey, it is true, the fruit-growing business had developed itself to a considerable extent, and peuch was raised with success at that time; we have now, in the United States, more han five hundred different varieties of peaches, and different kinds are constantly increasing as ment prevents the clogging of the pipe is the horticultural art becomes more and more devel-

Horticultural societies are springing up in most

very quarter of the Union. In California, the people boast of raising larger fruit than we-boast

of their pomological sacieties, and the inxuriant gardens of Los Augelas: so that the whole country seems to be awakehed to the importance of growing an abundance of wholesome fruit. This as it should be: for there is no branch of agrimary be carried down the penstock and by a literal labor so hearther to the ferrors and by a cultural labor so lucrative to the farmer and gard- similar lead pipe jointed to the cemen pipe per as is that branch which relates to fruit raising which is to carry it on. Set out a grape-vine next spring, and in two years, with good management, you can cat, from your vine, fine bunches of Isabella grapes, and they will not injure your appetite, much less the so is of your stomach; on the contrary, you will be benefitted by them. Set out a thrifty applebe henefitted by them. Set out a thrifty apple-tree, seven feet high, in the spring of 1854, and in the summer or fell of 1857 you can plack from charge pipe. This, kept dry, will p apples that would do credit to any hody's table. freeze But you must not manage the tree as it was the people's wont to doctor apple-trees ten or fifteen years ago set them out in grass sods, wishout

paying any attention to them.

Men formerly seemed to think that fruit-trees woold stand almost any kind of treatment, and receive due care and attention, and they will pay (FECTS, &c.—Water should not be admitted on a large percentage for the labor you lay out into the pipes under six or eight n their cultivation; but if you abuse them by cut-

ply the deficiencies in school education by an evening drill at home, were thereafter hased in raising thrifty apple and pear-trees. It is some upon the principle, 'one thing at a time for the times necessary, we admit, to root-prane, but such instances, in our estimation, are quite many to allowable where the roots afford too many

nourishment to the tree. unrishment to the tree.

The process of pruning of late, has become inportant to the fruit grower. Prune, but deliprune too much. You can form a tree but
generally to your ewa liking, by judicloss pruning. For instance, the apple-tree can be keptor
has cauthor off the tap shoots when it is your by cutting off the top shoots when it is young, it can be made to run up high in the air, by ping off" the side branches. But we should careful, I think, in cutting off lateral branches

As a general thing, we ought to think to he we would be enabled to gather our apples, pur, &c., without thirty or forty-feet ladders

nes luforms us that in reality, the "current hush" is wrongly named, for it ought to assure the name of a tree, since, in fact, by judicous pruning, it can be made to grow with a trunk and top like the apple-tree; and by thus pruning the

he bush is left without culture.

Times are facts for the million. Prane, enti-

Cement Water Pipes.

DITCHES FOR CEMENT PIPES. - These should certainly-be beyond the reach of from the bottom made level and even, and shout Is inches wide. Abrupt turns should be avoided.

PREPARATIONS OF THE CEMENT.-The first quality of lime, and clean, sharp, sand should bushel of lime to two of sand. These shall be thoroughly mixed before may watering to them, and the water added to only and

CONSTRUCTION OF THE PIPE-INFLIRENT USED .- When the ditch is ready und sountity of morter prepared, a kind of mill or box is brought into use for carriag the It is generally supposed that the Chinese same to the ditch. It is made a smooth

> about six inches of dirt thrown loosely over sides of the coment to prevent a piece breaking off the end as the rod starts. ed back over the finished part, while another mold of cement must be carefully jointed to the old-quite bard by this time-with the point of the trowel, and the rod then turns down, proceeding as before; put en the mo: tar and the dirt and then draw therod-pe forming all with care and neatness.

INTRODUCTION OF THE WATER.-A pust og affords the best means of introduct, the water to the pipe. It is tapered don't and cemented to the pipe at one the other extends into the spring -the hold at the end stopped, and chamber some four inches square, made 3 the lower side of the log. with a sieve !! keep out leaves and dirt. This arrange til the water is some inches above the trance. The wood is covered with center as far a possible so as to prevent its dell

CONNECTION OF PENSTOCK WITH PULlead pipe is connected with the cement, " plastering around it, and then the latter joined to the penstock by which the mice

This is perhaps the best plan, as the less will bend, and a jar or wrench of the pentitor stock will not break it, as it will the center to prevent the action of the frest on the penstock, put a plank frame or ber above

Would not Gutta Percha, or Galrania Iron be better than the lead, and wood for penstook jointing, and introduction pipel

LETTING IN THE WATER-REMEDTING ditch remaining half-filled as when first has When it is let in, a careful examinting off large line's unlace's surfly, and by plowing up the lateral roots when the it'r equires them to give it nourishment, you have spect that they be sound when proper care has been used to be found, a little cannot will be found, a little cannot will be found. We were taught several years since, that hard them, and if any part of the probable trees; but modern science now teaches that this is be orushed in, the top should he asked prettiee, and results in the material injury and a piece of tin the rigit.
