COLLIDES WITH STREETCAR

John Greenwell Has His Buggy Smashed but Escapes Personal Injury.

Funeral of W. R. Stevens-Peace Disturbers Reprimanded - Guardian Appointed for Vera Crawford,

Yesterday afternoon John Greenwell was driving his horse and buggy along Jefferson avenue and when crossing the Twenty-fifth street electric car tracks, a car was coming from the east which he was trying to avoid, and one was coming from the west which he did not see, it struck his buggy, and John jumped just in time to save himself from being crushed under the car, but the vehicle was broken to kindling wood, the horse was just across the track and thus escaped unhurt.

FUNERAL OF W. B. STEVENS.

The funeral services over the remains of W. B. Stevens were held yesterday afternoon at Larkin & Sons' undertaking parlors, under the auspices of the ducted the services. The attendance was large. The remains were laid to rest in the city cemetery.

PEACE DISTURBERS REPRI-MANDED.

The case of disturbing the peace against David Spackman, Alma Bailey, sgainst David Spackman, Alma Balley, George Rollins, George Jones, Ed-mund Shaw, Henry Storey, Albert Storey and Simeon Cragun, came on be-fore Justice Hall. These were the young men and boys who were charged with disturbing the meeting of Hon. William Glasmann at Pleasant View last Satur-day night and covering the vehicles of the Republican gentlemen with mud. f the Republican gentlemen with mud Each of the young men were placed on the witness stand and closely examined, but it was impossible to get any evidence out of them. The judge gave each of them a severe curtain lecture and dismissed the case upon their promise to behave in the future.

PHOTOGRAPHING FISH.

It is no exaggeration to say that no branch of photography presents such unusual difficulties as that of photographing live fishes. In the first place the insessant, rapid, and often erratic movements of the fish themselves have to be taken into account. Then there is the problem of correct focussing; and thirdly, the question of reflection, a most important item, if good results

In this article it is our intention to deal briefly with the wonderfully interesting experiments of Dr. R. W. Shufeldt, of Washigton, D. C., says a writer

in the November Pearson's.

Dr. Shufeldt's attempt was made in the early part of July, 1897, and the fish selected for his first exposure was a large pike. In alluding to this particu-lar photograph in his work, "Experi-ments in Photography of Live Fishes," published by the United States Fish Vocal solo ... Miss Mamie Harrington
Ten minute art talk ... Mrs. Katherine Fletcher
Plano solo ... Mrs. Blaisdell
Ten minute art talk ... Mrs. Corinne D. Adams

Mrs. Corinne D. Adams

Ten minute art talk ... to the plane of the glass, and about three inches from its inner surface ¼ inch diaphargm was used, and the subject remained practically motionless during the time of the exposure. Overhead the light was somewhat diffused, and an additional disadvantage presented itself in the fact that the color of the pike closely simulated the shade of the metal-black of the aquarium, thus rendernig strong outlines of the resulting negative a matter of doubt." However modestly Dr. Shufeldt may refer to this picture, it is none the less a remarkably clear photograph. It is interesting, too, for another reason. When it was compared with the drawings of this species in many well-known works, it was found that whilst in the case of the living fish the pectorial fins were extended almost directly downwere extended almost directly down-wards, and the extremities of the forks of the tail were distinctly round, in the books the fins pointed upwards, and the tips of the tails were not rounde off. In fact, it proved that the caudal fin, or tail, in previously recognized standard drawings of the pike were incorrect in outline.

THE BIG CAME.

Butte Football Team Will Reach Here Tomorrow Morning.

LARGE CROWD IS COMING.

Members of the Board of Education Will Accompany the Players-Home Team's Good Work.

Tomorrow afternoon will witness, it is expected, one of the best football games in the history of the sport in is being manifested by the numerous admirers of the opposing teams. The Salt Lake High school team put in three hours at hard practicing last evening and the result was most gratifying to Manager McFadden and Coach Callahan. Unfortunately one of the be in good shape for the contest tomorrow.

The team will finish off this evening. in light signal work and a run. Betting on the game is even despite the statement published this morning that odds ment published this morning that odds had been offered of 8 to 1 on the home team. A number of sports were around today looking for such odds but the best they could get was even money and not much of that.

The Butte team will reach here to-morrow morning and be met by a committee of the local team and excorted to tow. The will be account.

up town. The visitors will be accom panied by members of the Butte board of education and a large contingent of rooters who have plenty of money to wager on their favorites. The team will return to Butte after the game. will return to Butte after the game. This morning Manager McFadden received the line up of the visiting team which is as follows: Curtis (Capt.) I. h. b., Richard, r. h. b.; Brown, f. b.; Kyle, q. b.; Cohan, c.; Hyland, l. g.; Mills, r. g.; Johns, l. t.; C. Brown, r. t.; Earley, l. e.; Corette, r. e.

Subs—McDonald, (manager), Bliss, Hanley and Sampson. Colors, purple and white.

and white. The line up of the Salt Lake team will

be about the same as heretofore. LINCOLN DEFEATS GRANTS.

Game Played Yesterday Afternoon Resulted in a Score of 15 to 0.

Lincoln defeated Grants in a pretty fair game of football on Eighth South and Second West yesterday afternoon. The game was very clean and numer-ous good plays were made. Lincoln is ready now to meet any 90 pound aggre-gation in the country. Following was

Terry's Brother Fights, Too. All the McGoverns must be fighters.

There is no use denying this fact, as the following clipping from a New York exchange will show: Terry McGovern's brother, Hugh, was

in the Center Street court the other morning, charged with assault. Patrick McKenna of 75 Dey street charged McGovern with hitting him on the head with a brick. What about it?" Magistrate Brann asked McGovern.

"Well, it was this way," replied the outh. "He had an ax and I had a rick. If I had not done him he would wouth. "Is that so?" inquired the magistrate of McKenna.

guess he's about right," replied Mc-"Well, let it go at that," suggested the

McGovern and McKenna decided this course was the best, and the magistrate discharged McGovern. The latter is a fruit peddler, and Mc-Kenna works for a wholesale fruit dealer. The tow had a dispute over the

Christian s' Signal Work.

price of some fruit.

The Y. M. C. A. team held an interesting signal practice in the gymnasium last night and Coach Dana Smith reports that the team is now in excellent shape and the best team in the State. Another practice is scheduled for next Tuesday evening.

THE SHIP THAT FLIES.

Count von Zeppelin's air-ship has proven a success, according to the No-vember Pearson's. Those who had the good fortune to be in or near Fried-richshafen, the little town on the Lake of Constance, on the last day of June in the year 1900, are likely to remember that and the two succeeding days to the end of their lives, says Gustav

Levering in that magazine.

The inflation of the balloons was supervised by Captain Bartsch von Sigsfeld, of the Prussian Section of Military Ballooning, who had the assistance of Prussian officers and two officers of the Bavarian Section of Military Balioning. Ceptin Sigsfeld is an old hand at ballooning, having something like 160 ascents to his credit. It was about half-past eight when we

saw the point of the vessel make a move; then it was drawn from the shed. and lay exposed in all its length and breadth to the gaze of those who had remained behind. In appearance, Count von Zeppelin's

air-ship resembles a huge cigar, pointed at both ends; it is made chiefly of aluminum. Its length is about 415 feet. The diameter of the cylinder is 40 feet, and the total depth of the structure, including the gondolas in which the passengers are to sit, is rather more

The framework of this huge cylinder consists of aluminium bands, twenty-four in number. The interior of the cigar is divided by sixteen vertical ribs into seventeen compartments, each of which contains an independent balloon made of a material which the manufac-turer calls "ballonin." The making of these balloons has been one of the dif-ficulties which the inventor and his friends have had to overcome; the first ascent was to have taken place in October, 1899, but the halloons supplied did gle: the meteorologist rises above not fill the required conditions, and the perplexities of his local observation trial of the air-ship had to be post-

poned. Count von Zeppelin rightly insisted

The Oldest and Best. CORRICAN ON

S. S. S. is a combination of roots and herbs of great curative powers, and when taken into the circulation searches out and removes all manner of poisons from the blood, without the least shock or harm to the system. On the contrary, the general health begins to improve from the first dose, for S. S. S. is not only a blood purifier. but an excellent tonic, and strengthens and builds up the constitution while purging the blood of impurities. S. S. S. cures all diseases of a blood poison origin, Cancer, Scrofula, Rheumatism, Chronic Sores and Ulcers, Eczema, Psoriasis, Salt Rheum, Herpes and similar troubles, and is an infallible cure and the only antidote for that most horrible disease, Contagious Blood Poison.

A record of nearly fifty years of successful cures is a record to be proud of. S. S. S. is more popular today than ever. It numbers its friends by the thousands. Our medical correspondence is larger than ever in the history of the medicine. Many write to thank us for the great good S. S. S. has done them, while others are seeking advice about their cases. All letters receive prompt and careful attention. Our physicians have made a life-long study of Blood and Skin Diseases, and better understand such cases than the ordinary practitioner who boys was slightly injured, but he will makes a specialty of no one disease.

We are doing great good to suffering humanity through our consulting department, and invite partment, and invite you to write us if you have any blood or skin trouble. We make no charge whatever for this service.

THE SWIFT SPECIFIC CO., ATLANTA, GA.

hydrogen gas for five weeks without The capacity of the cigar is 11,000 cuble meters. The gas was brought to the spot compressed in steel cylinders, about 2,000 of which were required to fill the balloons.

The exterior is covered with a protective surface of pegamoid and silk, the upper portion being of the former material, and the lower portion being of the latter. The total weight of the ship, including its crew, is estimated not to exceed 20,000 lbs., but it is not expected that it will ever reach this figure in actual work.

figure in actual work. Four screws or propellers attached to the sides of the cigar are actuated by two Daimier motors of 15 horse-power each, and are capable of turning at the rate of 1,200 revolutions per minute. These propellers are made with blades of aluminium. The action of such proellers on air not being sufficiently well known to the inventor and his friends, various experiments had to be carried out with them. One of these was to attach them to a boat resting on the water and set them in motion against the air in order to see whether they would drive the boat forwards and backwards in spite of the extra re-sistance of the water. This experiment was eminently sucessful, the boat being driven in either direction at the rate of nearly ten miles an hour. Con-sidering the difference in resistance, it was estimated that the air-ship would be able to travel at a considerably greater speed.

The steering apparatus consists of four rudders, connected in pairs. One pair is in the foremost part of the ship, one rudder above and one below, working on a vertical axle; the other rate is a rocal to a contract of the ship. pair is in position to the rear, working in a similar manner. These rudders in a similar manner. These rudders are composed of rectangular pieces of aluminium, connected by pegamoid. They work on air in the same manner They work on air in the same manner as the rudder of a boat works on water, and they can be controlled by means of a winch in the foremost gondola. One pair turns in a direction opposite to that of the other pair, this double system of steering enabling the air-ship to describe small curves and increasing the navigability.

Underneath the cigar is a running compensation-weight; it is like a box in shape, and its object is to balance the airship when it takes an oblique position in descent. It is like the steer-ing apparatus, controlled from the front

One object attained by having independent balloons will be obvious to very on-if one is damaged, there is no fear of disaster to the airship, as the remaining balloons will be more than sufficient for sustaining it. Another ent; the gas is not one homogeneus mass, but strata is formed, with the lightest at the top. But for this di-vision it would be almost impossible for the ship to assume with safety a slop-ing position in descent, and there would, in fact, be very great danger of its toppling over.
Suddenly the spectators saw the end

of the airship swaying to and fro, and shortly afterwards it was out of its hed and the final preparations were

We heard the order "Los!" ("let go!") and amid indescribable excitement the monster airship majestically rose above

We could hear the hoarse whirr of the propellers, and see them flying round, 1,200 times to the minute; the airship was heading east, but in obedience to the rudders it turned southwards and went off in that direction at a height of 300 feet. The huge vessel flew di-

we saw the monster turning this way and that way in obedience to the rudders, and assume a slanting position when the running compensation-weight was set in operation; we saw it describe a comple circle and go from west to outh and east.

We saw it go higher, then descend, and so it sailed away towards Immenstadt, going higher and higher again; and finally we saw it descend almost to the surface of the lake after having flown a distance of six miles.

THE TENDENCY OF MODERN SCI-ENTIFIC RESEARCH.

Prof. Geddes of Dundee University, in The International Monthly for August, has touched a side of international exhibitions not thought of by the average visitor, that of the effect of environment upon people. In approaching his subject, a most interesting one, he alludes to the change in the methods of

"Thus the geologist passes into the study and interpretation of concrete scenery, and the astronomer reconstructs the theory and history of the tides; the zoologist leaves the anatomy for the distribution of animals, or sails forth upon a 'Challenger,' or an Arctic expedition; the botanist leaves the enumeration or cultivation of species for the study of characteristic formations, and maps out the regions of forest and heath, of desert and junperplexities of his local observations by mapping out the weather of contin Count you Zeppelin rightly instant that the balloons should be capable of retaining gas without appreciable loss reorganize the water supply or the drainage of cities, but begins to plan drainage of cities, but begins to plan drainage of the malarious trop retaining gas without appreciable loss for not less than two weeks; in ordinary ballooning two days is regarded as sufficient. After many experiments, a material was produced in the laboratory of Herr von Duttenhofer, the student of language or effolk-lore, or prepares a new reorganization of the matarious tropics, or prepares a new reorganization of the materious tropics. The proof is the proof of the p

STRIPPINGS FOR INVALIDS. With only the desire to benefit my fellow man, I wish to make a sugges-tion to your readers which I have found wonderfully helpful to my pa-tients. The last quart of the milking, or the "strippings," taken immediately after milking, before it has parted with any of the animal heat, is the most valuable thing known to build up a person who is thin and amaciated from any disease. I direct my patients to begin with one-half pint and gradually increase the quantity until at the end of the week they are taking a

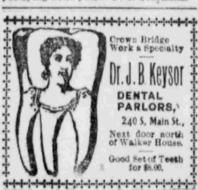

quart at a time, or as much as they can possibly drink without causing too much discomfort. This should be followed up regularly twice a day. It should be remembered that it is ery important to select a cow that is nealthy and one that gives very rich milk. I have tested this plan in hunreds of cases in the last few years and I know that there are thousands cases whose lives might be saved the above instructions were fol-wed. Of course in most cases a certain amount of medical treatment is also necessary.—B. J. Kendall, M. D.

GERMANY AND UNITED STATES.

"Our Agrarians are steering straight towards such a war of tariffs; they would not shrink even from a tariff war with Russia and the United States at

the same time.
"The question is now whether there will arise in Germany any government so conscienceless and so shortsighted as to join in such suicidal policy. It is equally evident, on the other hand, that for all questions of the greater world politics, particularly for the world pol-ltics that is unfolding itself in eastern Asia, it lies in the interest of Germany to maintain friendly relations with the American Union, to come out in favor of an open door policy."-The International Monthly.
