

JEROME COMES OUT FOR HUGHES

No Democrat Bound to Abide by Action of the Fake Buffalo Convention.

WILL WORK AGAINST HEARST.

As Yet Latter Has Not Given Out Any Interview or Statements.

New York, Sept. 27.—The day after the close of the two state conventions was not marked by any degree of activity in the working ranks of Republicanism, but was given up to a preliminary discussion and a preliminary outlining out of the ranks into lines for the campaign.

After watching carefully and being in a position to know what happened at the alleged Democratic convention at Buffalo, I do not believe that any man who is a real Democrat is bound by his signature to the Democratic party to abide by the action of such a fake convention.

"I shall work all I can in every way and everywhere I can to serve the Democratic party by securing the election of Charles E. Hughes, as the governor of the state of New York."

William H. Hearst, the Democratic nominee, returned to New York tonight from Poughkeepsie, where he spoke to a large assembly, but only indirectly referred to the action of the convention at Buffalo yesterday. Up to the present Mr. Hearst has given out no statement of acceptance, and at his headquarters tonight it was said that Mr. Hearst had not yet received official notification of his nomination by the convention.

Charles E. Hughes and his colleagues on the Republican state ticket are to be notified formally of their nomination by members of the state committee in the West Fourth street, next Wednesday. It has been decided that Mr. Hughes shall not follow the usual custom of accepting the nomination by a brief speech to be followed by a long letter of acceptance, but that he shall make his speech next Wednesday night his final answer and discuss in it the principal issues of the campaign.

BRYAN ENDORSES HEARST. Oklahoma City, Okla., Sept. 27.—Fifteen thousand people greeted W. J. Bryan tonight on his tour through Oklahoma.

In speaking of the nomination of William H. Hearst for governor by the Democrats of New York, Mr. Bryan said that in following the rule he has adopted in all state contests, he had seen no discrimination between candidates prior to the convention.

"I am much gratified at the nomination of Mr. Hearst," he said, "because I believe that he will make not only a strong man for the election, but also a good man after his election."

N. Y. REPUBLICANS. Headquarters Probably Will be Moved From Fifth Avenue Hotel.

New York, Sept. 28.—Announcement was made last night that the Republican headquarters located at the Fifth Avenue hotel for 30 years, will probably be removed to some more central location. The announcement is of interest to public men all over the country. Most of them have, at some time or other, visited at the headquarters in the Fifth Avenue, which has been the scene of numerous important political conferences.

Head the headquarters move, the "Times" corner, established by Senator Thomas C. Platt, may become a thing of the past.

State Chairman Timothy L. Woodruff, recently elected at Saratoga, sat down yesterday at the desk and in the chair so long occupied by Senator Platt and ex-Gov. Odell at the headquarters in the Fifth Avenue and it was soon after he had taken charge that the announcement of the probable removal was made. Later Mr. Woodruff and Secy. Gleason were out to look for new quarters and it was said the change may come at any time.

The work which won the victories of Morton, Black, Roosevelt, Odell, Higgins, Harrison and McKinley was planned and executed in the historical suite of rooms soon to be vacated.

M. NORODNY'S MISSION. Is to Appeal to World to Petition Czar For Peace.

New York, Sept. 28.—Ivan Ivanovich Norodny, head of the Russian Labor party, who arrived here yesterday from Russia, explained yesterday what his reported secret mission was.

"I was sent here," he said, "by the Russian military party to represent 150,000,000 people in an appeal to the world for a petition to the czar asking for peace and a new form of government."

M. Norodny said his people look to the United States for a larger part of the support in this new movement, which was suggested to his party, he said, by the czar's secretary.

"It has been proved conclusively," said the Russian reformer, "that it avails nothing to wage a war of blood upon the czar, so we have decided instead to declare on him a war of education and moral suasion."

M. Norodny expects to seek the support of William J. Bryan and Congressman John Sharp Williams. He will organize clubs in many of the large cities to obtain signatures to the petition.

EXILED FROM GEORGIA. Rev. W. J. White, Colored, Will Locate in New York.

New York, Sept. 28.—In response to telegrams from prominent colored church workers of this city it was learned yesterday that the Rev. W. J. White, editor of the Georgia Baptist, of Augusta, Ga., who has been exiled from that city on account of the race rioting in Georgia, is to make his future home in this city. He probably will be appointed pastor of a colored church here. Dr. White is 45 years of age. He was one of the prime factors in organizing the Equal Rights League of Georgia.

COMMISSIONER GARFIELD ON PROBLEMS OF BUSINESS. New York, Sept. 28.—James R. Garfield, commissioner of the bureau of corporations of the department of commerce and labor, Washington, in an address at the opening exercises of the school of commerce, accounts and finance of the University of New York last night said:

"The problems of business are no longer single. They are no longer the problems of the individual. They are the problems of the corporations. A corporation has great power—greater than that of the individual and hence of greater responsibility. It is a creature of the state and should be controlled by the state. The individual is lost in the corporation. This loss of personal responsibility has resulted in the loss of conscience. Corporations do what individuals cannot.

"Despite this the corporation is a great agency for good. But it is worse than useless to inveigh against corporations. The man who seeks to overthrow must have something to offer as a substitute. To destroy all corporations would be bad. It is for educated men to find out what is evil in the corporations of today and to destroy it and to make the corporations better and stronger."

LEYTE AND SAMAR. The Military Situation There Shows No Improvement.

Manila, Sept. 28.—The military situation in the islands of Leyte and Samar shows no improvement. The Pulajanes will not fight in the open but rely on night attacks. Small depredations keep the country in a continual state of alarm. Large bands of outlaws are dispersed, but small bodies of marauders prey on farmers and peaceful citizens and succeed in keeping away from the troops. The Associated Press is informed that the situation is likely to result in the establishment of military rule in both islands. Maj.-Gen. Wood will leave tomorrow for Samar on a tour of inspection.

AN HONEST DEBTOR. After Twenty-two Years Nathan Peterson Returns to Pay Some Old Debts.

New York, Sept. 28.—A Morristown, N. J., special to the Tribune states that Nathan Peterson, now a resident of Passaic, has returned to his old home town, Hackettstown, after an absence of 22 years to pay some bills contracted before he and his family moved away. He had met with adversity and sickness and was unable to meet his obligations but promised that if he was ever in a position to meet them he would return. His visit was for that purpose and his creditors have received amounts varying from \$2 to \$50 with liberal interest added. The man has been working and saving with the idea of paying off his debts.

DRUNK ENDS IN DEATH. Wealthy Man Attacks House Where Family Fled to and Gets Killed.

Hudson, N. Y., Sept. 28.—Clifford Bonnevillie, a wealthy resident of Lindlithgo, died today from wounds from a gun fired by J. Foster Feller, a 17-year-old son of Deputy Sheriff John H. Feller.

On Monday Bonnevillie, who had been drinking, it is said, drove his wife and five children out of doors and they sought refuge at the Feller home. Later he obtained two revolvers and went to the Feller home and pounded on the door. He had smashed in a pane of the door when young Feller from an upper story window warned him away. Bonnevillie pointed a revolver at the youth, so the latter says, but Feller fired the contents of a double barreled shotgun at him, mortally wounding him.

Bonnevillie made a fortune through the discovery that the rocks along the Hudson produced cement equal to the best imported cement, buying up many acres of land.

BUST OF REMBRANDT. The bust of the great artist Rembrandt shown in the cut was unveiled recently at Leyden, Holland. The work is based on the Ruccleuch portrait.

SHE FOUND RELIEF. If you are troubled with liver complaint and have not received help read this. Mrs. Mary E. Hammond, Moody, Texas, "I was in poor health—with liver trouble—for over a year. Doctors did me no good and I tried Herbine, and three bottles cured me. I can't say too much for Herbine. As it is a wonderful liver medicine, I always have it in the house. Sold by Z. C. M. I. where you wish."

LABOR DENOUNCES METHODIST CHURCH. Because it Refuses to Employ Union Men in Its Publishing Houses.

AFTER CHANCELLOR BUCHTEL. Of Denver University—Recognizes Him as Persistent Enemy of Organized Labor.

Colorado Springs, Sept. 27.—The state Federation of Labor today adopted a resolution denouncing Henry A. Buchtel, chancellor of the Denver university and Republican candidate for governor of Colorado. The resolution was offered by the delegation representing the Denver Trades and Labor assembly and was inspired by the local branch of the International Typographical union. It recites the fact of the prevailing eight-hour rule in job printing houses throughout the country and adds:

"Yet there is one organization—a religious sect—that has tenaciously and deliberately refused to recognize the demands of the printers, thus locking our men out and resisting to the fullest extent of its power the beneficence of the shorter work day. This denunciation is the Methodist Episcopal church, which, today in all its many publishing houses, refuses to employ union men or recognize the eight-hour day, thus showing clearly that it has higher regard for the dollar than for the man."

"One of the leading dignitaries of the Methodist Episcopal church, which has refused to recognize us in our organized capacity, is Chancellor Henry A. Buchtel of the University of Denver. This man is now the candidate for governor of Colorado on the Republican ticket. Therefore, in the light of the attitude of Methodism toward our union and, in the last analysis, toward all trade unions, we, the delegates from Denver Typographical union No. 49, regularly accredited to the eleventh annual convention of the Colorado State Federation of Labor, propose the following:

"Resolved, by the Colorado State Federation of Labor, in convention assembled, that in Chancellor Henry A. Buchtel, the candidate for governor of Colorado on the Republican ticket, we recognize a persistent and avowed enemy toward organized labor; and we urge upon all affiliated bodies and members to act in accordance with and in the light of these facts, by refusing, as one man to cast a vote in his favor."

The officers of the federation were instructed to carry out the intent of the resolution.

MURDER AND SUICIDE. Chicago, Sept. 28.—Charles G. Kline, an Evanston coal merchant, using a shotgun as a weapon, mortally wounded his wife as she lay in her bed in their residence early today. Then he placed the muzzle of the weapon against his side and killed himself instantly. Mrs. Kline died half an hour later.

It is believed Mr. Kline enacted the tragedy while mentally unbalanced. He had suffered from a disorder of the brain for some years and for a time was a patient in a sanitarium. Mr. Kline was 43 years old and his wife 29. They leave six children.

TO COMPLETE COLUMBIA JETTY. Portland, Or., Sept. 28.—A movement to secure financial assistance from other sources than Congress for the early completion of the Columbia river jetty, and to continue improvement work on the upper river will have its inception at a special meeting of the members of the chamber of commerce today. There is strong sentiment in favor of making an appeal to the legislature which meets in January, to grant a large appropriation to help along the work and it is probable that the chamber will officially request this assistance at the meeting today.

The work of improvement at the mouth of the river is now at its most critical stage, and unless sufficient money is forthcoming to finish the jetty its completion may be needlessly delayed for years. No less than \$2,500,000 will be required to complete the jetty and about \$400,000 is required to continue the work at Collio.

GEN. E. M. MCCOOK BETTER. Chicago, Sept. 28.—The condition of Gen. Edwin M. McCook, who was taken to the Baptist hospital three weeks ago so ill that his life was despaired of, was reported so much improved yesterday that he probably will be able to leave the hospital within 10 days. Although as a former brigadier general of volunteers, the Civil war hero receives a pension of but \$70 a month, at no time has he wanted for anything necessary, his brother, Gen. Anson G. McCook of New York having requested friends in Chicago to see that his comfort is provided for without regard to expense.

AN ASIATIC METHOD OF PUNISHING THIEVES. The illustration shows the very original way in which punishment is inflicted upon thieves in the kingdom of Burma. This method of crucifixion was devised by the witch doctors of the country, and its cruelty recalls the days of the Spanish Inquisition. Malefactors are stretched on an X shaped cross and left there until death releases them.

SCIENTIFIC MISCELLANY. The appearance of strange plants often follows sudden change in the surface of the soil, and many botanists and others have been disposed to attribute this to seeds, bulbs or spores of a former vegetation that have remained in the ground awaiting favorable conditions for growth. Recent studies in France are thought to confirm this view. Some years ago large quantities of a plant of southern Europe called Wolf's Milk with cypress-spruce (Euphorbia lathyrus, L.) were discovered in a remote two-year-old clearing in a large forest of the canton of Petite Malpierre, but two years later these had disappeared, while a thick growth was seen in a neighboring two-year-old clearing, with a few specimens only in a clearing a little more than three years old. M. Fliche is convinced that the plants have been crowded out by the growth of the forest trees. He finds that large Gallo-Roman iron works formerly existed at this spot, and, as the Romans made medical use of the Euphorbia lathyrus, he concludes that persons living at the works first introduced the plants, and that on the invasion of the region by forest the seeds lay dormant until the land was again cleared.

A curious friction effect lately described to the Paris Academy of Sciences is produced by rapidly spinning a glass globe filled with water containing a fine powder. When the powder is lighter than water, it collects along the axis of rotation, when heavier, the sphere separates into three zones, with two parallels of latitude equidistant from the equator, the upper and lower segments being clear, while the powder is in the central zone and mostly on the boundary lines.

The hillocks of white ants in Ceylon contain chambers of large size and contain, each enclosed sponge-like nests, each occupied by thousands of ants. The "termitic truffles," described by Dr. Doffein of Munich are pinhead nodules of white fungus cultivated in these nests as food.

The improvement of our plants is one of the great world movements now being inaugurated, in the opinion of Luther Burbank, and we may expect the gain in the production of food and other necessities to keep pace for a long time with the demands of an increasing population. Not only are the old plants to do better work, but we are to have better plants. Science, our authority tells us, sees better grains, nuts, fruits and vegetables, all in new forms, sizes, colors, and flavors, with more nutrients and less waste and with every injurious quality eliminated, and with power to resist sun, wind, rain, frost and destructive fungus and insect pests; fruits without stones, seeds or spines; better fiber, coffee, tea, spice, rubber, oil, paper, and timber trees and sugar, starch, color and perfume plants. Every one of these, and ten thousand more, are within the reach of the most ordinary skill in plant breeding.

In argon and helium has been seen the anomaly of elements without chemical affinity. Dr. T. Cooke has shown the London Royal society that even these gases follow the rule, as at about 1,300 degrees C. argon forms an unstable compound with zinc, and helium with cadmium.

The dangers of athletics in excess have been recognized by others besides Dr. Robert E. Coughlin, but he has put the results into concrete form. Of 123 deaths among athletes last year, 50 were due to disease and 73 to accident. Cerebro-spinal meningitis was the direct cause of death in 9 cases; heart disease in 8; pneumonia in 7; pulmonary tuberculosis in 7; Bright's disease in 5; appendicitis in 4; typhoid fever in 4; suicide in 2; apoplexy in 1; tonsillitis in 1; splenic aneurysm in 1; senility in 1. The accidents arose from football in 28 cases; baseball in 12; horse racing in 9; boxing in 6; gymnastic feats in 5; auto driving in 2; golf, hammer throwing, bicycle coasting, handball, polo and wrestling being responsible about equally for the other fatalities. The average age at death from disease was 31; from accident, 26 years 1 month. The conclusions are that athletes are exceptionally liable to heart lesions, fatal complications, of pneumonia with heart trouble, infectious disease, and pulmonary tuberculosis; that they average much shorter life than other persons; and that American football is especially dangerous.

The present atom being made up of smaller corpuscles, physicists have been unable to estimate the number of the latter. Some months ago C. E. Guye calculated that the hydrogen atom consists of one negative and one positive electron, and that the latter is the smaller. Prof. J. J. Thomson's latest experiments indicate that the number of negative electrons in the atom corresponds to the atomic weight of the element. This theory would give to the hydrogen atom one negative electron, to the helium atom 4, and to the lithium atom 7, but it seems to be not wholly convincing.

The vine of British royalty at Hampton court is one of the world's notable plants. It is now in its 145th year, and so carefully is it tended that its average yield is 800 bunches a year and it has produced 2,200. As both tree and fruit are benefited by occasional curtailing of production, only 500 bunches were allowed to ripen in 1905, the result having been a supply of unusually delicious grapes, most of the bunches weighing more than a pound each.

A growing evil reported by Dr. Aba Sztankay among the Slovaks of Upper Hungary is the habitual use of camphor internally. For 14 years he has persistently questioned buyers of the drug, and he concludes that at least 25 per cent. of the large and increasing amount sold is used by the camphor-eaters. An increase in epilepsy seems to be a result of this indulgence.

Aluminum, cadmium, zinc, magnesium, etc., affect the photographic plate, though not classed as radio-active. A late remarkable observation is that the electric spark sometimes increases the effect, sometimes lessens it, while this influence—though so superficial that slight sandpapering re-
