WANT STREAM PROTECTED. The question of protecting the water-

gives a line in the violet of the spec-trum. As this line differs from that of glowing lead, the presence of some yet unknown element is suspected. A novel danger from the use of per-

oxide of hydrogen as an antiseptic in surgery has been brought to notice by

is likely that many specimens will be rotected in a game reserve to the east Lake Mweru. Rhinoceroses are

fairly numerous, hippopotamuses abound. The rhinderpest of 1893 swept away vast numbers of such animals as the buffalo, cland and lichi antelope but recovery has been so rapid that in most districts game of all kinds is very abundant.

show her.

A complete revolution in gun-sighting has been predicted as an effect o the introduction of Sir Howard the introduction of Sir Howard Grubb's new telescope sight. The prin-ciple is entirely novel, aim being taken by looking through a small lens, when an image of a bright cross is thrown by an optical contrivance a long dis-tance in front of the barrel, and it is

only necessary to superpose this cross on whatever is to be hit. The usual back sight or fore sight is not reusual quired.

The three submarine boats built by Drebbel, a Dutch physician, in 1620 are not to be looked upon as the first ex-periment of the kind, it is pointed out. for Alexander the Great used diving bells nearly 2,000 years before, during the slege of Eyre. Since 1620, we are told, not less than 173 different submarine boats have been designed, ex-clusive of the numerous vessels now beby France and the United States.

The Moors are inveterate coffee drinkers, and Snaitken states that then

sight begins to gail at the age of 40 or 45, and many are blind at 50. The num, ber of blind in the streets of Fez is impressive, and excessive use of coffee is always given as the cause.

One of the most remarkable hobbies

is that of M. Honore Baudre, now liv-ing in a small town of India. This man, who seems to be a skilled musician, one day noticed that a suspended flint-stone gave forth a musical sound when struck , and he became inspired with the idea of collecting enough such stones for two complete chromatic scales. Since then, for more than thirty years, he has searched diligently near his home and in distant parts of the earth, testing thousands and thousands of specimens. He has found that sonor ous stones are not common, those emitting a desired note being much more rare, and it was many years before he

succeeded in obtaining the first "do" for his first octave, the last "do" of the for his first octave, the last 'do' of the second octave being still lacking. With his "geological plano" in its present form, however, he is able to play a great variety of airs. He uses an iron frame, from which the stones are sus-pended horizontally at the end of dou-ble stillers, and the best mouths are ble strings, and the best results obtained by striking with a hand flint upon the sensitive spot that experiment has shown each stone to possess. Some of the stones are of curious forms, "mi" of the lower octave being an axe of the stone age and "sol" a petrified fish

PROVO.

FUNERAL OF SARAH GRAY. A Veteran of '98-Court Notes-Dep

uty County Treasurers.

Special Correspondence. Provo, Utah Co., Oct. 7.-The funeral of Mrs. Sarah Gray was held Saturday

ternoon in the Second ward meeting use attended by many relatives and riends of the departed, including all her living children.

Bishop S. P. Eggertsen read a blographical sketch in part as follows: "Deceased, whose maiden name was Sarah Scott, was born in Ireland, Coun-Tyrone, June 11, 1804, and emigrated America in 1829. She was married to oseph Gray in New Brunswick in 1836. F Joined the Church of Jesus Christ aLtter-day Saints and came to Utah 1854, his wife becoming a member of the Church in 1855, and remaining a lithful talthful member to the day of her death. Together they passed through the hardships of a new country, her companion dying thirteen years ago, leaving her to pursue the journey of life alone. She was the mother of seven sons and one daughter, all of whom lived to be grown. Of the five sons living, four reside in Provo, as also the daughter, Mrs. Sarah Scott. The absent son. Enoch Gray, is a resident of Ne-vada. Sister Gray also leaves twenty-Vada e grandchlidren and five great-grand-

immediate cause of death was The old age, the lady having reached, with-in a few months, the great age of nine-ty-eight. Deceased had enjoyed fairly Food health, going about the house and attending to various small household enjoyments through the summer. She was in possession of her mental faculties, taking an active part in all that concerned the welfare of her children and their families. She was wont to and their families. She was wont to say, as one after another of those who had been her contemporaries passed away, and also a younger generation. The Lord has surely forgotten that I am still upon the earth.' When the hour of her release came she passed peace-fully away, without pain, and without apprehension, the fruit of a well spent. Virtuous life, shining forth in the hope of a glorious resurrection and eternat progress with her loved ones." The spenkers were Elders Alex. Wil-

Demise of Jonathan Heaton-Prevalence of Typhoid-Building Boom.

Special Correspondence. Payson, Utah, Oct. 6.-Jonathan, Hea-Payson, Utah, Oct. 6.—Jonathan Hea-ton of this place, who died on the 4th inst., was buried today from the taber-nacie. The cause of death was old age and general debility. He was born in Little Horton, Yorkshire, England, Jan. 15, 1824, was baptized a member of the Church of Jesus Christ of Latter-day Saints in April, 1849; and traveled. preaching the Gospel at different times from 1856 until the spring of 1851, when he emigrated to Utah and settled in Payson. He was married to Sarah Pedder in Nov., 1861. Six of nine chil-dren are living.

dren are living. Typhoid fever is very prevalent here,

The Nordrach treatment of tuber-culosis provides for an abundance of fresh air day and night, a superabundshed of Spanish Fork river seems to be uppermost just now. A meeting con-sisting of the mayor and a committee ance of food, and exercise graduated by body temperature. Decidedly favorable results in Ireland are thought by Dr. Hichens to be of great interest as showing that the cure of consumption does not depend on climate or sunshine. The good effects have been obtained during a cold, wet summer, and an unusually wet and stormy winter.

The spectrum known to Sir Isaac Newton consisted only of visible bright and dark lines. Twenty years ago it had been learned that there were in-visible lines of heat and cold, and Dr. John Draper inferred that a solar specfailing just in the time when the supply is most needed to be kept up. The weather has been quite warm and dry, making the work of harvesting trum on a scale to show a visible part one foot long would have an invisible portion of somewhat less than three feet. Since then Prof. S. P. Langiey has the beets quite laborious. The beet crop is turning out very well, and it made the invisible part beyond the red accurately known to nearly 20 feet on the same scale. This has been done with the bolometer, now so sensitive as to indicate the one-thousand-millionth of a degree Centigrade, and this so readily distinguishes the alternations of heat and cold in spaces not one-hundredth of an inch apart that more than 700 invisible lines have been mapped—a greater number than Kircheff and Bunsen have laid down in the visible spectrum. These invisible OUR NEICHBORS. lines have been marked with such pre-cision that the probable error is less than one second, the two or three lines traced by Sir John Herschel hav-

lines traced by Sir John Herschel hav-ing had a possible error of half a de-gree or so. In probing this mysterious region. Prof. Langley reached a point where all trace of the spectrum van-ished, yet a little further out the in-strument responded again, yielding a most astonishing and unexpected dis-covery of new lines. Progressive changes of this outer spectrum with the seasons are expected to give future POCATELLO, IDAHO, M. I. A. REORGANIZED. ANTHON H. LUND.

ture being the use of the motor under water. The propeller weighs about thirty-five younds, and the storage bat teries are made so compact that they can be placed under the seats of an ordinary rowboat, two boxes of cells giving a speed of four miles an hour for five to eight hours on one charge. An advantage claimed from placing the motor outside the boat is avoidance of

strain and vibration. The larvae of flies, bees, beetles and other insects have been placed in the wooden half of a box having one section of lead and another of wood, and on exposure to Roentgen rays they have been greatly excited, invariably re-treating to the leaden part of the box. With blind larvae the results were the same, showing that the exciting rays were perceived through the nerves of

the skin.

In the ordinary safety lamp, the aureole about the flame indicates the presence of firedamp when the propor tion rises to about 2 per cent. The al-cohol flame of Pielor gives warning by 0.25 per cent, and Chesneau's flame colored by cuprous cloride is sensitive to 0.1 per cent. The electric test of Liveing-depending upon the difference in brightness of two glowing wires, one surrounded by air and the other by the atmosphere containing the dangerous gas—shows about 0.5 per cent. The new electric meter of G. Leon acts through the difference in resistance of two platinum wires heated to 1,000 de-grees by the same current, one being enclosed by a glass tube containing pure air and the other surrounded by wire gauze, and this meter is not sensitive to the presence of fire-damp, but gives a very accurate estimate of its quantity. A deflection of four scale divisions of the Wheatstone bridge galvanometer corresponds to a proportion of 0.2 per cent of fire-damp, the deflection reaching a maximum when the fire-damp rises to 10 per cent,

A simple process for manufacturing A simple process for manufacturing potassium salts has been tried on a commercial scale by a chemist of Man-chester, England. The raw material is feldspar, which is finely ground, mixed with slaked lime and sodium chloride, and heated to 200 degrees C. this method from 80 to 90 per cent

of the potassium in the feldspar is ob-tained as potassium chloride. After the potassium and sodium saits are dissolved out, the insoluble matter left is adapted for use for glass by adding a little sand and alkall. The first fac-tory is to be established in Sweden, where great quantities of feldspar are obtained.

The mysterious boomings known as

'barisal guns" were studied in Italy several years ago by Dr. Cancani, who concluded that the sounds must originate within the earth. The view has been confirmed by more recent observations, in which such noises could not have been due to artificial or atmospheric causes, while in some in-stances they were attended by perceptible earth tremors.

Vaccination is held responsible for unsound teeth by Mr. Albert Carter, as 12 and 13 he finds dental carles unknown wher-ever people have not learned to vac-18 and 19 19 and 20 einate. 25 and 26
